FOR IMMEDIATE RELEASE

New VM Template Makes It Easier to Deploy Altova Server Platform on Azure

Seattle, WA, May 7, 2018 – Altova® (http://www.altova.com) announced today at Microsoft Build the release of a free virtual machine (VM) template for use on Azure. The template is pre-installed with the complete line of Altova's high performance server software for automating data processing and data integration workflows.

"This is great for Microsoft developers because it makes it easier and more convenient to get Altova server software up and running in the Azure cloud," said Alexander Falk, President and CEO of Altova.

Available on the Azure Marketplace, the free template installs the complete line of Altova server software products including the Altova LicenseServer. Customers can activate some or all the products using their purchased license key codes, or they can use the included LicenseServer to request free, 30-day trials of the products.

Here are the products included on the VM template:

- **FlowForce Server** - a highly-customizable workflow engine that empowers data architects, analysts, and other IT professionals to efficiently complete enterprise-level data processing and data integration tasks. It includes an intuitive Web interface for managing job scheduling and security options.
- **MaprForce Server** - automates mapping and aggregation processes designed in Altova MapForce for XML, JSON, databases, flat files, EDI, Excel, XBRL, and Web services data. It may be used under the management of FlowForce Server or used standalone.
- **StyleVision Server** - automates business report generation in HTML, PDF, and Word/OpenXML based on designs created in Altova StyleVision. It may be used under the management of FlowForce Server or used standalone.
- **RaptorXML Server** - is the third-generation, hyper-fast XML, XBRL, and JSON validator and processor from the makers of XMLSpy. RaptorXML is built from the ground up to be optimized for the latest standards and parallel computing environments. It may be used under the management of FlowForce Server or used standalone.
- **DiffDog Server** - combines the rich file and directory comparison options of DiffDog with the power of today's parallel computing environments to let you automate high volume comparisons and generate diff reports automatically.
- **MobileTogether Server** - is the back-end hub for mobile apps built in MobileTogether Designer. It acts as a gateway between mobile users and back-end data sources and infrastructure, providing high-performance data processing, sophisticated cache control options, optional security functionality, and more.

To get started with the VM template please search for Altova on the Azure Marketplace.

About Altova

Altova® is a software company specializing in tools that assist developers with data management, software and application development, mobile development, and data integration. The creator of XMLSpy® and other award-winning products, Altova is a key player in the software tools industry and the leader in XML solution development tools. The company offers a complete line of desktop developer software for XML, SQL, and UML; high-performance workflow automation server products; and a cross-platform mobile development platform. Altova focuses on its customers' needs by offering a product line that fulfills a broad spectrum of requirements for software development teams. With over 5.1 million users worldwide, including 91% of Fortune 500 organizations, Altova is honored to serve clients from one-person shops to the world's largest organizations. Altova is committed to delivering standards-based, platform-independent solutions that are powerful, affordable and easy-to-use. Founded in 1992, Altova is headquartered in Beverly, Massachusetts and Vienna, Austria.
