

iLevel Software and Altova announce the availability of Insite Server XML Templates

Powerful content and document management system uses AUTHENTIC 5 Browser Plug-in as XML content authoring tool for business users

London UK and Beverly, USA – January 8, 2003 - iLevel Software, the producer of the Insite Content management server, and Altova, Inc. the world's leading XML tools company and producer of XMLSPY 5, today announced the availability of **Insite Server's XML Templates Module**, including integration with Altova's AUTHENTIC 5, which enables XML content authoring for business users. The standards-centric architecture (XML) of this out-of-the-box, 100% browser-based software, and the absence of proprietary tags and scripts guarantees that information stays portable and organizations retain great infrastructure flexibility across any number of documents, platforms and formats.

"iLevel Software is very pleased to partner with Altova and bring this **Enterprise-level yet affordable** software product to market" stated Don Cordeiro, iLevel Software's Chief Executive. "Developers can now leverage of the XMLSPY developer environment and the AUTHENTIC 5 XML document authoring tool to create custom user-interface template elements such as XSL Stylesheets, AUTHENTIC Forms, and XML Schema, and take advantage of the extensive Insite Server Content and Document management feature-set to empower their authoring teams to share, create, edit, manage, revise and publish data."

"The combined AUTHENTIC 5 and Insite Content Management Server integration is the perfect implementation of a document framework application - an XML-centric approach to creating and editing business content on the Web" said Alexander Falk, President & CEO of Altova Inc. "We applaud this innovative use of the AUTHENTIC 5 Browser Edition, which will enable corporations to realize substantial cost savings through automated document processing, enhanced searching, indexing and effective reuse of Web based content."

Insite Server's unique document-centric architecture is most suitable for content and document management in demanding enterprise environments. The software keeps all data in "platform-neutral" native formats such as XML, HTML, and Office, preserving portability, scalability and speed. In addition, Insite Server also offers the ability to maintain layout and structure consistency across the entire website and the ability to re-purpose data by publishing it to several formats and audiences. For developers it also provides great features such as automatically maintained site navigation/menus, WYSIWYG authoring, Workflow, Versioning, Check-in and check-out, Scheduling, and many more.
