FOR IMMEDIATE RELEASE

Altova Announces New Features for Low-Code and No-Code App Development

Beverly, Mass., January 25, 2023 – Altova® (http://www.altova.com) announced the release of MobileTogether 8.1, its low-code app development platform for building enterprise solutions and native apps for iOS, Android, and Windows. The release also includes RecordsManager 2.0, a special, no-code solution for building database apps using the MobileTogether framework.

MobileTogether 8.1

New features include:

- **UI compatibility mode between clients** – this time-saving option makes it easy to create apps with default elements that look similar on all device operating systems (instead of using the native look-and-feel of each OS)
- **Deployment of very large server-side files** – extended support for files 100 MB and larger makes MobileTogether well suited for building very large enterprise solutions
- **Extended database support** – to include support for the latest versions of popular relational databases
- **Major updates for no-code database app development** using RecordsManager 2.0 (see below)
- And many more

RecordsManager 2.0

RecordsManager is a no-code solution for creating custom database apps in MobileTogether Designer using an intuitive, purely visual design interface. One of the biggest advantages of RecordsManager is that **app creators don't need to build the database backend themselves**. This saves an incredible amount of time and work and allows system administrators or developers of all skill levels to easily create effective apps.

New features include:

- **Major scripting extensions** – the visual scripting editor lets app administrators define sophisticated app behavior in response to user input
- **New "User" field type** – makes it possible to note which user created or modified a record, who is responsible for reviewing it, etc.
- **Hierarchical user groups** – make roles assignments easier for firms where users belong to multiple groups (e.g., office, department, management team, etc.)
- And many more
