

Altova® RaptorXML® is the third-generation, hyper-fast XML and XBRL processor from the makers of XMLSpy®. Altova drew upon its fifteen-year tenure as leader in the XML tools field to architect RaptorXML from the ground up, optimizing it for the latest standards and parallel computing environments. Designed to be highly cross-platform capable, the engine takes advantage of today's ubiquitous multi-CPU computers to deliver lightning fast processing of XML and XBRL data. RaptorXML supports all relevant standards and has been submitted to rigorous regression and conformance testing to achieve greater than 98% conformance.

In today's organizations, XBRL mandates and Big Data trends are producing huge, ever increasing amounts of XML and XBRL data. Now, there is finally a modern, hyper-fast engine to validate, process, transform, and query all of it: RaptorXML.
