1 Altova Authentic Browser Edition ................................................. 3

2 About This Documentation .......................................................... 6

3 Overview .......................................................................................... 8
   3.1 Benefits of Authentic Browser .................................................. 9
   3.2 How It Works ............................................................................. 10
   3.3 Authentic Browser Versions .................................................... 12

4 Server Setup .................................................................................. 16
   4.1 IIS: Configuring the Browser Service ........................................ 17
   4.2 XSD, XML, and SPS/PXF Files .................................................. 20
   4.3 HTML Page for Authentic Plug-in .............................................. 22
      4.3.1 Licensing for Enterprise Edition ........................................ 24
      4.3.2 Internet Explorer ................................................................. 26
         − The OBJECT Element .......................................................... 27
         − The SCRIPT Element .......................................................... 31
         − IE Example 1: Simple .......................................................... 32
         − IE Example 2: Sort a Table ................................................... 34
      4.3.3 Firefox .................................................................................. 37
         − The EMBED Element ............................................................ 38
         − Adding Event Listeners ......................................................... 41
         − Firefox Example 1: Simple .................................................... 42
         − Firefox Example 2: Sort a Table ............................................ 44
      4.3.4 Browser-Independent ........................................................... 47
         − Browser-Independent Example .......................................... 48
   4.4 Extension Packages for On-Demand Installation ............................ 52

5 Client Setup .................................................................................. 54
   5.1 Browser Requirements ............................................................. 55
   5.2 Authentic Browser Plug-in ....................................................... 56
6 User Reference

6.1 Mechanisms .................................................. 69
   6.1.1 Events: Connection Point (IE-Specific) ................. 70
   6.1.2 Events: Adding Event Listeners (Firefox-specific) ....... 72
   6.1.3 Events: Toolbar Button ................................... 73
   6.1.4 Events: Reference ......................................... 74
   6.1.5 Accessing and Modifying Document Content .......... 75
   6.1.6 Editing Operations ......................................... 76
   6.1.7 Find and Replace ........................................... 77
   6.1.8 Row Operations ............................................. 78
   6.1.9 Shortcut Keys ............................................... 79
   6.1.10 Text State Buttons ........................................ 80
   6.1.11 Entry Helpers .............................................. 81
   6.1.12 Packages .................................................. 82
      - Working with Packages ..................................... 83
      - Spellchecker Packages ..................................... 86
   6.1.13 Using XMLData ........................................... 89
   6.1.14 DOM and XMLData ....................................... 93
   6.1.15 Authentic Scripting ......................................... 97
6.2 Objects ................................................................ 99
   6.2.1 Authentic .................................................. 100
      - Authentic.ApplyTextState .................................... 103
      - Authentic.attachCallback .................................. 104
      - Authentic.View .............................................. 106
      - Authentic.AutoHideUnusedCommandGroups ............... 107
      - Authentic.BaseURL ......................................... 108
      - Authentic.ClearSelection ................................... 109
      - Authentic.ClearUndoRedo .................................. 110
      - Authentic.ControllInitialized .............................. 111
      - Authentic.CreateChild ..................................... 112
      - Authentic.CurrentSelection ............................... 113
      - Authentic.DesignDataLoadObject ......................... 114

5.2.1 Installation on Demand ........................................ 57
5.2.2 Manual Installation via Extension Packages ............... 58
5.2.3 Manual Installation via MSI ................................ 59
5.2.4 Push Installation using MSI .................................. 60
5.2.5 Automatic Updates ......................................... 61
5.2.6 De-installation, Disabling ................................... 62

5.3 IE9 Security Settings ........................................... 63
5.4 IE10 Security Settings ........................................... 65
- Authentic.EditClear ................................................................. 115
- Authentic/EditCopy ............................................................... 116
- Authentic/EditCut ................................................................. 117
- Authentic/EditPaste ............................................................... 118
- Authentic/EditRedo ............................................................... 119
- Authentic/EditSelectAll ......................................................... 120
- Authentic/EditUndo ............................................................... 121
- Authentic.EnableModifications ............................................. 122
- Authentic.EntryHelperAlignment ........................................... 123
- Authentic.EntryHelpersEnabled ............................................ 124
- Authentic.EntryHelperSize ................................................... 125
- Authentic.EntryHelperWindows ............................................ 126
- Authentic.event ................................................................. 127
- Authentic.FindDialog ......................................................... 128
- Authentic.FindNext ............................................................ 129
- Authentic.GetAllAttributes ................................................. 130
- Authentic.GetAllowedElements ............................................ 132
- Authentic.GetFileVersion .................................................... 134
- Authentic.GetNextVisible .................................................... 135
- Authentic.GetPreviousVisible .............................................. 136
- Authentic.IsEditClearEnabled ............................................... 137
- Authentic.IsEditCopyEnabled ............................................... 138
- Authentic.IsEditCutEnabled .................................................. 139
- Authentic.IsEditPasteEnabled ............................................. 140
- Authentic.IsEditRedoEnabled ............................................... 141
- Authentic.IsEditUndoEnabled ............................................. 142
- Authentic.IsFindNextEnabled ............................................... 143
- Authentic.IsRowAppendEnabled .......................................... 144
- Authentic.IsRowDeleteEnabled ............................................ 145
- Authentic.IsRowDuplicateEnabled ...................................... 146
- Authentic.IsRowInsertEnabled ............................................ 147
- Authentic.IsRowMoveDownEnabled ..................................... 148
- Authentic.IsRowMoveUpEnabled ......................................... 149
- Authentic.IsTextStateApplied ............................................. 150
- Authentic.IsTextStateEnabled ............................................. 151
- Authentic.LoadXML ............................................................ 152
- Authentic.MarkUpView ...................................................... 153
- Authentic.Modified ........................................................... 154
- Authentic.Print ................................................................. 155
- Authentic.PrintPreview ....................................................... 156
- Authentic.RedrawEntryHelpers .......................................... 157
- Authentic.ReloadToolbars ................................................... 158
- Authentic.ReplaceDialog ..................................................... 159
- Authentic.Reset ................................................................. 160
- Authentic.RowAppend ......................................................... 161
6.2.2 AuthenticCommand ................................................................. 191
  - AuthenticCommand.CommandID .................................................. 192
  - AuthenticCommand.Group ........................................................ 193
  - AuthenticCommand.ShortDescription ....................................... 194
  - AuthenticCommand.Name .......................................................... 195

6.2.3 AuthenticCommands .............................................................. 196
  - AuthenticCommands.Count ...................................................... 197
  - AuthenticCommands.Item ....................................................... 198

6.2.4 AuthenticContextMenu ........................................................ 199
  - CountItems .............................................................................. 200
  - DeleteItem .............................................................................. 201
  - GetItemText ............................................................................ 202
  - InsertItem ............................................................................... 203
  - SetItemText ............................................................................ 204

6.2.5 AuthenticDataTransfer .......................................................... 205
  - AuthenticDataTransfer.dropEffect ............................................ 206
6.2.6 AuthenticEvent ................................................................. 210
  - AuthenticEvent.altKey .......................................................... 211
  - AuthenticEvent.altLeft .......................................................... 212
  - AuthenticEvent.button .......................................................... 213
  - AuthenticEvent.cancelBubble ............................................... 214
  - AuthenticEvent.clientX ......................................................... 215
  - AuthenticEvent.clientY ......................................................... 216
  - AuthenticEvent.ctrlKey ......................................................... 217
  - AuthenticEvent.ctrlLeft ....................................................... 218
  - AuthenticEvent.dataTransfer ................................................ 219
  - AuthenticEvent.fromElement ................................................ 220
  - AuthenticEvent.keyCode .......................................................... 221
  - AuthenticEvent.propertyName ................................................ 222
  - AuthenticEvent.repeat .......................................................... 223
  - AuthenticEvent.returnValue ............................................... 224
  - AuthenticEvent.shiftKey ......................................................... 225
  - AuthenticEvent.shiftLeft ....................................................... 226
  - AuthenticEvent.srcElement .................................................. 227
  - AuthenticEvent.type .............................................................. 228

6.2.7 AuthenticEventContext ...................................................... 229
  - EvaluateXPath ................................................................. 230
  - GetEventContextType ......................................................... 231
  - GetNormalizedTextValue .................................................... 232
  - GetVariableValue .............................................................. 233
  - GetXmlNode ................................................................. 234
  - IsAvailable ................................................................. 235
  - SetVariableValue .............................................................. 236

6.2.8 AuthenticLoadObject .......................................................... 237
  - AuthenticLoadObject.String ............................................... 238
  - AuthenticLoadObject.URL .................................................. 239

6.2.9 AuthenticRange ................................................................. 240
  - AuthenticRange.AppendRow ................................................ 242
  - AuthenticRange.Application ............................................... 243
  - AuthenticRange.CanPerformAction ....................................... 244
  - AuthenticRange.CanPerformActionWith .................................. 245
  - AuthenticRange.Clone ....................................................... 246
  - AuthenticRange.CollapsToBegin ......................................... 247
  - AuthenticRange.CollapsToEnd ............................................. 248
  - AuthenticRange.Copy ........................................................ 249
  - AuthenticRange.Cut ........................................................... 250
  - AuthenticRange.Delete ....................................................... 251
  - AuthenticRange.DeleteRow .................................................. 252
- AuthenticRange.DuplicateRow ................................................................. 253
- AuthenticRange.EvaluateXPath ................................................................. 254
- AuthenticRange.ExpandTo ........................................................................ 255
- AuthenticRange.FirstTextPosition .............................................................. 256
- AuthenticRange.FirstXMLData ................................................................. 257
- AuthenticRange.FirstXMLDataOffset .......................................................... 258
- AuthenticRange.GetElementAttributeNames ............................................... 260
- AuthenticRange.GetElementAttributeValue ............................................... 261
- AuthenticRange.GetElementHierarchy ....................................................... 262
- AuthenticRange.GetEntityNames ............................................................... 263
- AuthenticRange.GetVariableValue ............................................................ 264
- AuthenticRange.Goto .............................................................................. 265
- AuthenticRange.GotoNext ........................................................................ 266
- AuthenticRange.GotoNextCursorPosition ............................................... 267
- AuthenticRange.GotoPrevious ................................................................... 268
- AuthenticRange.GotoPreviousCursorPosition ........................................ 269
- AuthenticRange.HasElementAttribute ....................................................... 270
- AuthenticRange.InsertEntity .................................................................. 271
- AuthenticRange.InsertRow ...................................................................... 272
- AuthenticRange.IsCopyEnabled ............................................................... 273
- AuthenticRange.IsCutEnabled .................................................................. 274
- AuthenticRange.IsDeleteEnabled .............................................................. 275
- AuthenticRange.IsEmpty ......................................................................... 276
- AuthenticRange.IsEqual ......................................................................... 277
- AuthenticRange.IsFirstRow ...................................................................... 278
- AuthenticRange.IsInDynamicTable ............................................................ 279
- AuthenticRange.IsLastRow ....................................................................... 280
- AuthenticRange.IsPasteEnabled ............................................................... 281
- AuthenticRange.IsSelected ...................................................................... 282
- AuthenticRange.IsTextStateApplied ........................................................ 283
- AuthenticRange.LastTextPosition ............................................................. 284
- AuthenticRange.LastXMLData ................................................................. 285

AuthenticXMLTableCommands

6.2.16 AuthenticXMLTableCommands

- AuthenticXMLTableCommands.AlignHorizontalCenter ........................................ 366
- AuthenticXMLTableCommands.AlignHorizontalJustify ......................................... 367
- AuthenticXMLTable Commands. AlignHorizontalLeft ......................................... 368
- AuthenticXMLTableCommands.AlignHorizontalRight ......................................... 369
- AuthenticXMLTableCommands.AlignVerticalBottom .......................................... 370
- AuthenticXMLTableCommands.AlignVerticalCenter .......................................... 371
- AuthenticXMLTableCommands. AlignVerticalTop .............................................. 372
- AuthenticXMLTableCommands.AppendCol ......................................................... 373
- AuthenticXMLTableCommands.AppendRow ......................................................... 374
- AuthenticXMLTableCommands.Delete ............................................................... 375
- AuthenticXMLTableCommands.DeleteCol ......................................................... 376
- AuthenticXMLTableCommands.DeleteRow ......................................................... 377
- AuthenticXMLTableCommands.EditProperties .................................................. 378
- AuthenticXMLTableCommands.Insert ................................................................ 379
- AuthenticXMLTableCommands.InsertCol .......................................................... 380
- AuthenticXMLTableCommands.InsertRow .......................................................... 381
- AuthenticXMLTableCommands.JoinDown .......................................................... 382
- AuthenticXMLTableCommands.JoinLeft ............................................................ 383
- AuthenticXMLTableCommands.JoinRight .......................................................... 384
- AuthenticXMLTableCommands.JoinUp ............................................................... 385
- AuthenticXMLTableCommands.MayAlignHorizontal ........................................... 386
- AuthenticXMLTableCommands.MayAlignVertical .......................................................... 387
- AuthenticXMLTableCommands.MayAppendCol .......................................................... 388
- AuthenticXMLTableCommands.MayAppendRow ......................................................... 389
- AuthenticXMLTableCommands.MayDelete ................................................................. 390
- AuthenticXMLTableCommands.MayDeleteCol ............................................................ 391
- AuthenticXMLTableCommands.MayDeleteRow .......................................................... 392
- AuthenticXMLTableCommands.MayEditProperties .................................................... 393
- AuthenticXMLTableCommands.MayInsert ................................................................. 394
- AuthenticXMLTableCommands.MayInsertCol ........................................................... 395
- AuthenticXMLTableCommands.MayInsertRow .......................................................... 396
- AuthenticXMLTableCommands.MayJoinDown ........................................................... 397
- AuthenticXMLTableCommands.MayJoinLeft .............................................................. 398
- AuthenticXMLTableCommands.MayJoinRight ............................................................ 399
- AuthenticXMLTableCommands.MayJoinUp ............................................................... 400
- AuthenticXMLTableCommands.MaySplitHorizontal .................................................. 401
- AuthenticXMLTableCommands.MaySplitVertical ...................................................... 402
- AuthenticXMLTableCommands.SplitHorizontal ......................................................... 403
- AuthenticXMLTableCommands.SplitVertical ............................................................. 404

6.2.17 XMLData ........................................................................................................... 405
- XMLData.AppendChild ............................................................................................... 406
- XMLData.CountChildren ......................................................................................... 407
- XMLData.CountChildrenKind .................................................................................. 408
- XMLData.EraseAllChildren ..................................................................................... 409
- XMLData.EraseChild ............................................................................................... 410
- XMLData.EraseCurrentChild .................................................................................... 411
- XMLData.GetChild .................................................................................................... 412
- XMLData.GetChildAttribute .................................................................................... 413
- XMLData.GetChildElement ...................................................................................... 414
- XMLData.GetChildKind ............................................................................................ 415

Chapter 1

Altova Authentic Browser Edition
Altova® Authentic® 2018 Browser Edition empowers business users to easily create and edit XML and database content through a user interface that closely resembles an easy-to-use word processor. The Browser Edition can be embedded in any Web page and allows editing directly within the Browser. Authentic Browser Edition is available as a plug-in for the Microsoft Internet Explorer and Mozilla Firefox browsers.

Authentic Browser is available in a single Enterprise Edition (license required), in a trusted version and an untrusted version.
Chapter 2

About This Documentation
About This Documentation

This documentation is the Authentic Browser Plug-in user manual. It is organized into the following sections:

- **An Overview** section that explains: (i) the benefits of using Authentic Browser; (ii) how Authentic Browser works; and (iii) the various Authentic Browser Versions.
- **A Server Setup** section, which describes the steps required to set up a server for an Authentic Browser project, including a detailed description of the HTML Page for Authentic Plug-in, and a section explaining how the Authentic Browser extension packages can be used for on-demand installation.
- A **Client Setup** section, which includes a section explaining the various ways of installing the Authentic Browser plug-in in client browsers.
- A three-part reference section (User Reference: Mechanisms, User Reference: Objects, and User Reference: Enumerations) on the mechanisms, objects, and enumerations used to create and customize Authentic View in Authentic Browser.
- To ease deployment of the Authentic Browser Plug-in we provide an [ASP.NET Server Control](#) that completely integrates with Visual Studio .NET.

**Related documentation**

There are two sets of additional Altova documentation that are relevant:

- Documentation for creating StyleVision Power Stylesheets (SPSs) is available with the Altova StyleVision product at the [Altova website](#). An SPS is the file that controls the Authentic View of an XML document. This documentation is relevant for persons developing the Authentic View interface for XML editing.
- Documentation for using Authentic View. Persons using Authentic View should be referred to the Authentic View tutorial and usage sections of the Authentic Desktop User Manual, which is available online at the [Altova website](#).
Chapter 3
Overview
Overview

Altova® Authentic® 2018 Browser Edition enables users to edit XML documents based on StyleVision Power Stylesheets (.sps files) that have been created in Altova StyleVision. It is a unique solution that allows live XML content editing from within an Internet browser window on any desktop (client) in your organization.

This Overview section is organized into the following sub-sections:

- **Benefits of Authentic Browser**: notes the uses and advantages of using Authentic Browser.
- **How It Works**: briefly explains how the Authentic Browser solution works; it organizes the description in terms of server and client setup requirements.
- **Authentic Browser Versions**: explains the various Authentic Browser versions currently available at the [Altova website](https://www.altova.com).

1 Benefits of Authentic Browser

The Authentic Browser XML editing solution has several benefits, the most important of which are listed below:

- Enables multiple users to access and edit an XML document via their browsers. Currently, Microsoft Internet Explorer 5.5 or higher and Mozilla Firefox are supported. The 64-bit versions of Internet Explorer 10 and 11 are not supported.
- Dramatically eases organization-wide deployment and application maintenance while also reducing the total cost of ownership.
- Based upon open standards, such as XML Schema and XSLT.
- Is fully Unicode compatible.
- Uses Altova's Authentic View, which is based on the widely used and easily available Internet Explorer browser. Authentic View enables users to edit XML files in a WYSIWYG fashion, i.e. without users having to see the underlying XML code.
- Does not require deployment of any additional software since the Authentic Browser plug-in is a browser add-on.
- The Authentic Browser is an ActiveX control where the COM interface is defined by the Authentic object. The complete object model is described in the User Reference: Objects section of this documentation.
2 How It Works

To implement an Authentic Browser project, you will need one server machine, and one or more client machines that are connected to the server.

Authentic Browser Server
The Authentic Browser server carries out the following functions:

- The server stores files related to the Altova Authentic XML document that is to be edited. These files are:
  1. The XML Schema (XSD) on which the editable XML document is based;
  2. The XML document to be edited;
  3. The SPS or PXF file that controls the layout and input mechanisms of the XML document in Authentic View.

- The server stores the HTML Page for Authentic Plug-in. This HTML page is the access point for Authentic View editing. It contains instructions to access the XML document, and it serves as a container for the Authentic View window in which the XML document is loaded and edited. To access this page, its URL is typed into client browsers.

- If you are deploying the Enterprise edition of Authentic Browser, then the Enterprise license must be stored on the server. Enterprise licenses are issued for one or more specified servers.

- If on-demand installation of the Authentic Browser plug-in is planned, the server stores the Authentic Browser extension package/s (CAB, XPI, and/or CRX file/s) for the download and installation of the plug-in on client machines. (Otherwise, the plug-in is installed directly in client browsers.)

The steps required to prepare the server are described in the section, Server Setup.

Authentic Browser Clients
An XML document can be viewed and edited in Altova's Authentic View if the XML document has an SPS or PXF file assigned to it. Authentic View editing is carried out on client machines, which must be set up as follows:

- Each client must have one of the following browsers installed: Internet Explorer 5.5 or higher (32-bit and 64-bit), Firefox (32-bit)

- Additionally, each client machine must have Internet Explorer 5.5 or higher installed on it. This is because the Authentic View interface (which will be displayed within the browser window) is generated using Internet Explorer.

- Unless on-demand installation has been planned, the Authentic Browser plug-in must be directly installed on client browsers.

The steps required to prepare clients are described in the section, Client Setup.

Authentic Browser mechanism
After the server and clients have been prepared as described above, the user enters the URL of the HTML page for Authentic Plug-in in the client browser. If the plug-in has not already been installed in the client browser, the HTML page can contain instructions to perform an on-demand installation of the plug-in in the client browser.

Once the plug-in is installed on the client, code in the HTML page causes an Authentic View
editing window to open within the browser window. The XML document to be edited is loaded into the Authentic View window from the server and the user can start editing it and saving changes directly to the XML document.
3 Authentic Browser Versions

Authentic Browser versions are available according to the following criteria:

- **Language:** English (EN), German (DE), Spanish (ES), Japanese (JA)
- **Trusted/Untrusted:** Trusted, Untrusted
- **Client browser:** Microsoft Internet Explorer (32-bit and 64-bit), Mozilla Firefox (32-bit), Google Chrome (32-bit). Also see Browser Requirements.

For each supported language (English, German, Spanish, Japanese), separate trusted and untrusted versions are available for each supported browser (Microsoft Internet Explorer 32-bit and 64-bit, and Mozilla Firefox). One, some, or all of these versions of the Authentic Browser plug-in can be installed on a client machine. Each will be displayed as a separate plug-in in the browser's Add-on Manager.

The different versions for English (EN), German (DE), Spanish (ES), and Japanese (JA) are listed below with their class IDs (for CAB files) and MIME types (for XPI and CRX files). You will need to specify the relevant class ID or MIME type in the HTML page for Authentic Plug-in.

- **CAB files and their Class IDs (identical Class IDs for 32-bit and 64-bit Internet Explorer)**

You can download one or more of these versions from the Altova Website according to your requirements.

Note the following points about the various Authentic Browser versions:

- All versions are Unicode versions and each provides full support of multiple character-sets in the XML document. Unicode versions are supported on the following client workstations: Windows 7 SP1 with Platform Update, Windows 8, Windows 10.
- Although there is a separate CAB file each for the 32-bit and 64-bit Internet Explorer versions, the Class IDs of the two .CAB files (for 32-bit and 64-bit IE browsers) are identical and are as given in the table above for various EN/DE/ES/JA and Trusted/Untrusted versions.
- The Trusted version does not allow access to local files and is, therefore, marked as being "safe for scripting". It can be used in a browser-based scenario and can be invoked from any web page without causing security alerts on the client side.
- The Untrusted version is intended for intranet deployment, or for using the Authentic Browser Edition as an ActiveX control in your application. It provides access to local files and is therefore not marked as being "safe for scripting". If you try to use this version from within a browser window, it will ask the user for permission. You can decide whether ActiveX controls should be disabled or enabled, or whether the browser should prompt for permission to enable ActiveX controls (see the browser-specific section for details: Internet Explorer 9).

Note: To install and configure your browser service (e.g. Microsoft's Internet Information Services), refer to the supplier's documentation.

Chapter 4
Server Setup
Server Setup

Setting up the server for Authentic Browser entails the following steps.

**Configuring the Browser Service**
Install and configure the browser service of your server. If you use Microsoft’s Internet Information Services (IIS), note that the installation process creates a default directory called Inetpub with subdirectories. The root directory of the server would then be: //Inetpub/wwwroot. This is the directory reached with the IP Address of the server if you do not specify (in your browser service configuration) some other directory as the root directory. For details about installing and configuring your browser service, see the supplier’s documentation.

**Setting up the XSD, XML, and SPS/PXF files**
An SPS file enables the XML document to be displayed in an editable format in Authentic View. It is based on an XML Schema (XSD file) and is designed in Altova’s StyleVision product. The SPS file, together with the XSD file and XML document to be edited must be stored at a network location that is accessible to all client machines (typically on the Authentic Browser server). The section XSD, XML, and SPS/PXF Files describes this server preparation step in more detail.

**Creating the HTML page for Authentic Plug-in**
The HTML Page for Authentic Plug-in is the access point for Authentic View editing. It contains instructions to access the XML document, and it serves as a container for the Authentic View window in which the XML document is loaded and edited. To access this page, its URL is typed into client browsers. This HTML page must be created correctly and stored on the server. How to create the HTML page is described in the section, HTML Page for Authentic Plug-in.

**Storing extension packages for on-demand installation**
Download Authentic Browser (a zipped CAB, XPI, or CRX file) from the Altova website to any location on the server. If you are deploying the Enterprise edition of Authentic Browser, then the package must be stored on the server for which the Enterprise license has been registered. Do not unzip this file. On the website, for each language version (English, German, Spanish, and Japanese), there are trusted and untrusted versions of Authentic Browser, each in four formats (CAB 32-bit, CAB 64-bit, XPI, and CRX). For information on which file format and which version to select, see the sub-sections of this section.

**Note:** Before installing Authentic Browser, make sure that no previous version of Authentic Browser is running. Otherwise the new version might not be registered correctly, and this could result in a defective installation. If that happens, register the plug-in by running: regsvr32 C:\Windows\Downloaded Program Files\AuthenticPlugin.dll. (Note that you need administrative privileges to run the program regsvr32.exe.)
1 IIS: Configuring the Browser Service

Microsoft’s Internet Information Services (IIS) 6 serves up only file types that are defined in the MIME types for that specific site (website or folder). Required filetypes, therefore, must be added to the list of MIME types for a given site.

For working with Authentic Browser, the following filetypes are required and must be added:

<table>
<thead>
<tr>
<th>File extension</th>
<th>MIME type</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>xsd</td>
<td>text/plain</td>
<td></td>
</tr>
<tr>
<td>sps</td>
<td>text/plain</td>
<td></td>
</tr>
<tr>
<td>pxf</td>
<td>application/x-zip-compressed</td>
<td>For Firefox.</td>
</tr>
<tr>
<td>xpi</td>
<td>application/x-xpinstall</td>
<td></td>
</tr>
</tbody>
</table>

Adding MIME types for a site in Internet Information Services
To add a MIME type to the list of MIME types for a particular site on a Windows XP machine, do the following. The process is similar on other supported systems (Windows 7 SP1 with Platform Update, Windows 8, Windows 10).

1. Open Control Panel and double-click Administrative Tools.
2. In the folder that pops up (screenshot below), double-click Internet Information Services.
3. In the Internet Information Services (IIS) folder that appears (screenshot below), first select the required site (website or folder) in the folders pane (at left) and then click the Properties icon (under cursor in screenshot below) or the Properties command from the context menu (accessed by right-clicking).
4. In the HTTP Headers tab of the Properties dialog, click the **File Types** button in the MIME Map pane (*see screenshot below*).
5. In the File Types dialog (*screenshot below*), click the **New Type** button.

![File Types dialog](image1)

6. In the dialog that pops up enter the required extension and its MIME type. See the table above for required filetypes and their corresponding MIME types.

![File Type dialog](image2)

7. Confirm with **OK**.

For a description of how to set up remote access to a folder on an internal server via Web-DAV, see [this Windows IT Pro article](https://www.windowsitpro.com/).
2 XSD, XML, and SPS/PXF Files

The main purpose of implementing an Authentic Browser plug-in project is to view and edit an XML document in Authentic View format. This format hides the XML markup of an XML document and enables the editing of the document in a custom-designed WYSIWYG interface. The layout and data input mechanisms of an XML document in Authentic View is defined in an SPS file. The SPS file, the XML file, and the XML Schema file (XSD file) on which both the SPS and XML documents are based must therefore be stored on the network so that they are accessible to Authentic Browser clients.

SPS files

An SPS file is created in Altova’s StyleVision product. It is based on the same XML Schema as that on which the XML file is based. In StyleVision, an SPS designer can use drag-and-drop and page layout mechanisms to design the SPS. The SPS file determines the layout and data input mechanisms of the XML document when it is displayed in Authentic View.

In the HTML Page for Authentic Plug-in, the locations of the XML file, SPS file, and XSD file are specified. The XML file is loaded in the Authentic View window (in the HTML page) and displayed according to the design specified in the SPS file. Both the XML file and the SPS file are based on the same XML Schema (though the XML file can be based on a part of the larger schema the SPS uses).

Note: For Authentic Browser to work correctly, you must ensure that a schema is assigned as a main schema in the SPS file. For detailed information about creating StyleVision Power Stylesheets (SPSs), see the user manual of Altova’s StyleVision product. You can also read a description of the StyleVision product at the Altova website.

XML files

The Authentic View user edits the XML document on a client machine by accessing the HTML Page for Authentic Plug-in. This page contains an Authentic View window in which the XML file is loaded. The Authentic View user edits the document in the client browser and saves changes back to the XML document.

XSD files

The XSD file serves two purposes. It is used to validate the XML document, and it provides the generic document structure on which the SPS is based. Both the XML file and the SPS file reference the XSD file. So the XSD file must also be stored in at the correct location as referenced by the XML and SPS files.

Storage location of XSD, XML and SPS/PXF files

The XSD, XML, and SPS (or PXF) files must be saved at network locations that can be accessed by all client machines. The best location is the Authentic Browser server. It is best to locate these files in a single folder on the server and to specify the references within them to each other as relative paths. So, for example, the XML file should be created with the XSD reference within it specified as a relative path.
Note about DB-based SPSs

If Authentic Browser will be used to view or edit databases (DBs) using a DB-based StyleVision Power Stylesheet (SPS), then you need to make the following settings to ensure that the client connects correctly to the DB.

Connection information in the SPS: All the information required to connect to the DB is stored in a connection string in the SPS. The connection string in the SPS is created in StyleVision at the time you create the StyleVision Power Stylesheet. The mechanism used to connect to MS Access DBs is different than for other DBs. For other DBs, ADO connections are used. The settings you need to make for these two types of connection mechanism are described below.

- For MS Access DBs: In the connection string for MS Access DBs, a UNC path must be used so that clients can correctly connect to the DB. This UNC path is specified when the StyleVision Power Stylesheet is built in StyleVision. You must, however, make sure that the folder containing the DB (or some ancestor folder) is set up for sharing. (In Windows XP, the sharing settings are accessed by right-clicking the folder and selecting Sharing and Security.) You must also enable Advanced File Sharing on this machine (My Computer | Tools | Folder Options, then uncheck Simple File Sharing). No settings are required on clients.

  Note: The format of the UNC path used in the connection string is: \servername\sharename\path\file.mdb, where servername is the name of the server, sharename is the name of the shared folder (specified in the Share settings you make for the shared folder on the server), path is the path to the DB, and file.mdb is the name of an MS Access DB in the shared folder or a descendant folder of the shared folder.

- For ADO connections: The ADO connection string in the SPS is specified when the SPS is built in StyleVision. It contains all the required connection information, including security information. You must ensure that the driver used when testing the connection string in StyleVision is also installed on all client machines that will host Authentic Browser. This enables the SPS to correctly connect to the DB from clients. Note also that ADO database connections will only work with local file paths and not with http:// URLs.

Note about PXF Files

An SPS design that uses XSLT 2.0 can be saved as a Power XML Form (PXF) file. The PXF file format has been specially developed by Altova to package the SPS design with related files (such as the schema file, source XML file, image files used in the design, and XSLT files for transformation of the source XML to an output format). The benefit of the PXF file format is that all the files required for Authentic View editing and for the generation of output from Authentic View can be conveniently distributed in a single file.

Note: If a PXF file is located on a web server and will be used with the Authentic Browser Plug-in, you must ensure that the server does not block the file. You can do this by adding (via the IIS administration panel, for example) the following MIME type for PXF (.pxf) file extensions: application/x-zip-compressed.
3 HTML Page for Authentic Plug-in

The HTML Page for Authentic Plug-in carries out the following important functions:

1. The first time that the HTML Page for Authentic Plug-in is opened on a client, code within the HTML page causes the Authentic Browser plug-in to be downloaded from the server to the client and installed on the client. This code has to be written correctly to identify the correct file on the server. The format of the file that is downloaded (CAB, XPI, or CRX) will depend on the client's browser. The code will also be different because Internet Explorer and Firefox process code differently than each other.

2. Code within the HTML page sets up the Authentic View interface within the browser window, including the dimensions of the Authentic View interface, and the locations of the XML, XSD, and SPS files.

3. It specifies the XML file to edit, as well as the schema file and SPS on which the XML file is based.

4. It contains, within HTML SCRIPT elements, definitions for subroutines and the handling of events. For example, it can be specified what action to carry out when a button in the HTML page is clicked. See Internet Explorer Example 1: Simple and Firefox Example 1: Simple for examples.

Note: If you are deploying the Enterprise edition of Authentic Browser, then the HTML page must be installed on the server for which the Enterprise license has been registered.

Embedding Authentic Browser

To use the Authentic Browser plug-in, an object that identifies the plug-in must be embedded in the HTML page that downloads the plug-in. This is done using the following HTML elements and attributes:

- Internet Explorer: `<OBJECT clsid="clsid:<CLSID>"/>
- Firefox: `<embed type="<MIMEType>"/>

For information on what CLSID and MIME type values to use, see Authentic Browser Versions.

This section

The sub-sections of this section describe how the functions listed above are to be implemented in the HTML page. These sections are organized at the first level by browser-type because of the different ways used to download the Authentic Browser DLL for particular browsers:

- Licensing for Enterprise Edition describes the licensing mechanism for the Enterprise Edition of Authentic Browser
- Internet Explorer describes how to download a CAB file (having a .cab extension) via an HTML OBJECT element.
- Firefox describes how to download an XPI file (extension .xpi) via an HTML EMBED element.
- Independent browsers describes how to determine the browser type making the request and how to then download the correct plug-in version for that browser.

In these sub-sections, you will find descriptions and examples of how the HTML OBJECT, EMBED, and SCRIPT elements are to be used, as well as examples of complete HTML pages that invoke the Authentic Browser plug-in. For information about individual objects, see the respective Object
descriptions in the Reference section.
3.1 Licensing for Enterprise Edition

The license for Authentic Browser Enterprise Edition can be purchased at the Altova Website.

Overview of setting up the Enterprise Edition license

Given below is a list summarizing the steps you must take to correctly set up your license information for Authentic Browser Enterprise Edition.

- Authentic Browser Enterprise Edition requires the following valid license information: (i) the server name for which the license is valid; (ii) the name of the company to which the license has been registered, and (iii) the license key. This information will be sent to you in the License Email you will receive on purchasing your Authentic Browser Enterprise Edition license.
- The license information must be located in the HTML Page for Authentic Plug-in. How exactly this is to be done in the HTML page is explained below. (Note that there is no specific license key file that Authentic Browser will reference.)
- If the licensing information supplied in the HTML Page for Authentic Plug-in is valid, Enterprise Edition functionality in the Authentic Browser File will be unlocked.
- The HTML Page for Authentic Plug-in must be stored on the server for which the license is valid.

How to enter the license information

The three license key parameters (server name, company name, and license key) must be entered in the HTML Page for Authentic Plug-in and can be done in the following ways:

- As parameter values of the OBJECT or EMBED elements. How to do this is described in the respective HTML page sections for Internet Explorer and Firefox.
- If the HTML page is to be browser-independent, the license parameters can be registered as shown in the code listing in the Browser-Independent Example.
- The license parameters can also be set on the object directly, as shown in the code listing below, which adapts the code listing in the Browser-Independent Example.

```javascript
<SCRIPT LANGUAGE=javascript>
// event subscription if running on Firefox
if ( isFirefoxOnWindows() )
{
    objPlugIn.addEventListener("ControlInitialized",
InitAuthenticPluginPage, false);
}
</SCRIPT>

<SCRIPT LANGUAGE="javascript" FOR=objPlugIn EVENT="ControlInitialized">
// event subscription if running on Internet Explorer
if ( isIEOnWindows() )
{
    InitAuthenticPluginPage();
}
</SCRIPT>

<SCRIPT type="text/javascript" LANGUAGE="javascript" >
function InitAuthenticPluginPage( )
```
```javascript
{  
var serverstr='DevAuthBrowTest';
var basedir='Authentic/';
objPlugIn.LicServer = 'DevAuthBrowTest';
objPlugIn.LicCompany = 'Altova';
objPlugIn.LicKey = 'XXXXXXXXXX';
objPlugIn.SchemaLoadObject.URL = 'http://' + serverstr + basedir + 'OrgChart.xsd';
    objPlugIn.XMLDataLoadObject.URL = 'http://' + serverstr + basedir + 'OrgChart.xml';
    objPlugIn.DesignDataLoadObject.URL = 'http://' + serverstr + basedir + 'OrgChart.sps';
    objPlugIn.StartEditing();
}
</SCRIPT>
```
3.2 Internet Explorer

If the HTML page for the Authentic plug-in is opened in Internet Explorer (32-bit or 64-bit), then it must contain the following elements:

- An HTML `OBJECT` element, which (i) causes the correct DLL for the Authentic Plug-in (32-bit or 64-bit) to be downloaded from the server to the client, and (ii) specifies the dimensions of the Authentic View window in the client’s browser. The `OBJECT` element contains the location of the Authentic Browser plug-in. **Note that the Authentic Plug-in is available in versions for 32-bit and 64-bit Internet Explorer (except 64-bit IE 10 and 11), so the correct Authentic Browser plug-in version (.cab file) must be downloaded to the client.** See the section, Browser-Independent Example, for example code which automatically checks the X-bit version of Internet Explorer and downloads the correct Authentic Plug-in.

- One or more HTML `SCRIPT` elements for defining subroutines and the handling of events. A `SCRIPT` element can be used to specify the XML document to be edited, and the XML Schema and SPS file on which the XML document is based.

This section is organized into the following sub-sections:

- **The OBJECT Element**, which describes how the HTML `OBJECT` element is to be used in an HTML page for the Authentic plug-in.
- **The SCRIPT Element**, which describes how HTML `SCRIPT` elements are to be used in an HTML page for the Authentic plug-in.
- Examples of full HTML pages: IE Example 1: Simple and IE Example 2: Sort a Table.

For information about individual objects, see the respective Object descriptions in the Reference section.

**Note:** The Authentic Browser plug-in is supported for **Internet Explorer 5.5 or higher**. However the 64-bit versions of Internet Explorer 10 and 11 are not supported.
3.2.1 The OBJECT Element

The OBJECT element has the following functions:

- It gives the Authentic Browser Plug-in a name (via the id attribute).
- It selects which version of the Authentic Browser Plug-in to use (with the value of the classid attribute).
- It specifies a .CAB file and version number (codebase attribute). The .CAB file contains a DLL, which registers a COM object (the Authentic Browser Plug-in) with an ID that is the value of the classid attribute. Typically, both the 32-bit and 64-bit versions of the Authentic Browser Plug-in will be stored on the server. Each version is identified by a different file name. The codebase attribute specifies the file name of the required .CAB file (see code listing below). The Class IDs for 32-bit and 64-bit .CAB files are identical to each other and are as given in the table for various EN/DE and Trusted/Untrusted versions.

  Filename for 32-bit version: AuthenticBrowserEdition.CAB
  Filename for 64-bit version: AuthenticBrowserEdition_x64.CAB

- It specifies the dimension of the Authentic View window in the client’s browser (via the style attribute).
- It can specify any number of parameters.

Here is a sample HTML OBJECT element. It selects the Trusted Unicode version (with the value given in the classid attribute) and sets the dimensions of the Authentic View window in the client's browser to 600 x 500 pixels. All the attributes and parameters available to the OBJECT element are explained below.

Note: The version number given below may not be the current version number. See codebase below for details.

For 32-bit Authentic Browser Plug-in:

```html
<object id="objPlugIn" style="WIDTH:600px; HEIGHT:500px"
                     codeBase="http://yourserver/cabfiles/AuthenticBrowserEdition.CAB#Version=12,3,0,0"
                     classid="clsid:B4628728-E3F0-44a2-BEC8-F838555AE780">
  <param name="XMLDataURL" value="http://yourserver/OrgChart.xml">
  <param name="SPSDataURL" value="http://yourserver/OrgChart.sps">
  <param name="SchemaDataURL" value="http://yourserver/OrgChart.xsd">
</object>
```

For 64-bit Authentic Browser Plug-in:

```html
<object id="objPlugIn" style="WIDTH:600px; HEIGHT:500px"
                     codeBase="http://yourserver/cabfiles/AuthenticBrowserEdition_x64.CAB#Version=12,3,0,0"
                     classid="clsid:B4628728-E3F0-44a2-BEC8-F838555AE780">
  <param name="XMLDataURL" value="http://yourserver/OrgChart.xml">
  <param name="SPSDataURL" value="http://yourserver/OrgChart.sps">
  <param name="SchemaDataURL" value="http://yourserver/OrgChart.xsd">
</object>
```
The value of the `id` attribute is used as the name of the Authentic Browser Plug-in objects when these are used in scripts. For example, `objPlugIn.SchemaLoadObject.URL` is a call to the object that loads the schema file. See The SCRIPT element for more details.

**style**
This is the usual HTML `style` attribute, and is used to specify the dimensions of the Authentic View window in the client's browser.

**codebase**
The `codebase` attribute gives the location of the `.CAB` file. Note that there is a different `.CAB` file for the 32-bit Authentic Browser plug-in and for the 64-bit Authentic Browser Plug-in, named, respectively: `AuthenticBrowserEdition.CAB` and `AuthenticBrowserEdition_x64.CAB`.

The value of the optional `#Version` extension gives the version number of the component that is currently available on the server. If the client has an earlier version and a newer version is specified in the `codebase` attribute, the newer version is installed from the server. If the `#Version` extension is not specified, no update will take place until the component has been removed manually from the client. The current version number of the component is listed with the properties of the `.dll` file of the component's `.CAB` file (right-click the file and select the Properties command).

**classid**
The Class IDs for 32-bit and 64-bit `.CAB` files are identical to each other and are as given in the list below for various EN/DE and Trusted/Untrusted versions.

From version 5.0 onwards of the Browser Plug-in, the `classid` value for Unicode versions from versions 5.0 onwards is different from that of previous Unicode versions. So, if you are updating the Unicode `.CAB` file on your server from a version prior to 5.0, make sure that you change the `classid` values in your HTML files. Note also that if a new `.CAB` file on the server has the same CLSID as that of a `.CAB` file which has been installed previously on the client, then the new `.CAB` file will not automatically replace the old one on the client. You must remove the previously installed `.CAB` file before downloading the new `.CAB` file. The CLSID values of different language versions are different.

Also, when selecting the version to download to a client, bear in mind that older operating systems may not be able to correctly install the Unicode versions.

Given below are the CLSID values of the English (EN) and German (DE) versions. (For other available languages, see Authentic Browser Versions.)

**EN Trusted Unicode:**
c1sid:B4628728-E3F0-44a2-BEC8-F838555AE780

**EN Untrusted Unicode:**
c1sid:A5985EA9-3332-4ddf-AD7F-F6E98BEA9F94

**DE Trusted Unicode:**
c1sid:91DDF44A-DFD1-4F47-8EE3-4CBE874584F7

**DE Untrusted Unicode:**
Parameters
Any number of the following parameters may be used.

LicServer
The name of the server for which the Authentic Browser Enterprise Edition license key is valid.

LicKey
The license key for validating the use of Authentic Browser Enterprise Edition.

LicCompany
The company name for validating the use of Authentic Browser Enterprise Edition.

XMLDataURL
An absolute URL that gives the location of the XML file to be edited. For the Untrusted versions, you can also use a full local path.

XMLDataSaveURL
An absolute URL that gives the location where the XML file is to be saved. For the Untrusted versions, you can also use a full local path.

SPSDataURL
An absolute URL that gives the location of the StyleVision Power Stylesheet (.sps file). For the Untrusted versions, you can also use a full local path.

SchemaDataURL
An absolute URL that gives the location of the associated schema file. For the Untrusted versions, you can also use a full local path.

TextStateBmpURL
The folder where bitmap image for text-state icons are to be stored.

TextStateToolbarLine
The toolbar line in which text-state icons are to be placed. The default is 1.

AutoHideUnusedCommandGroups
Determines whether unused toolbar command groups should be hidden. The default is True.

ToolbarsEnabled
Specifies general support for toolbars. The default is True.

ToolbarTooltipsEnabled
Specifies whether Tooltips are enabled or not.

HideSaveButton
If set to True, removes the Save button from the Authentic toolbar, which is visible by default.

BaseURL
Gives the base URL for use with relative paths.

SaveButtonUsePOST
If set to True, the HTTP POST command is used instead of a PUT when saving the document.

**EntryHelpersEnabled**
If set to True the Authentic entry helpers are visible

**EntryHelperSize**
Width of the entry helper window in pixels.

**EntryHelperAlignment**
Specifies the location of the entry helpers relative to the document window.

- 0 = Align toolbar at top of document
- 1 = Align toolbar at left of document
- 2 = Align toolbar at bottom of document
- 3 = Align toolbar at right of document

**EntryHelperWindows**
Selects which of the entry helper sub-windows are visible.

- 1 = Elements
- 2 = Attributes
- 4 = Entities

Any combination is allowed (bit-check)

**SaveButtonAutoEnable**
See Authentic.SaveButtonAutoEnable

**LoaderSettingsFileURL**
Gives the URL of the LoaderSettingsFile for package management.
3.2.2 The SCRIPT Element

The SCRIPT elements define the event handlers and subroutines that can be called from within the HTML file.

Here is a sample of a script for handling an event:

```html
<SCRIPT LANGUAGE="javascript" FOR=objPlugIn EVENT="ControlInitialized">
  objPlugIn.SchemaLoadObject.URL = "http://yourserver/OrgChart.xsd"
  objPlugIn.XMLDataLoadObject.URL = "http://yourserver/OrgChart.xml"
  objPlugIn.DesignDataLoadObject.URL = "http://yourserver/OrgChart.sps"
  objPlugIn.StartEditing
</SCRIPT>
```

Here is a sample of a script that contains subroutines:

```html
<SCRIPT ID=clientEventHandlers LANGUAGE=vbscript>
  Sub BtnOnClick
    objPlugIn.SchemaLoadObject.URL = "http://yourserver/OrgChart.xsd"
    objPlugIn.XMLDataLoadObject.URL = "http://yourserver/OrgChart.xml"
    objPlugIn.DesignDataLoadObject.URL = "http://yourserver/OrgChart.sps"
    objPlugIn.StartEditing
  End Sub

  Sub OnClickFind
    objPlugIn.FindDialog
  End Sub

  Sub BtnOnTestProp
    If objPlugIn.IsRowInsertEnabled Then
      msgbox "true"
    Else
      msgbox "false"
    End If
  End Sub
</SCRIPT>
```

LANGUAGE

The Authentic Browser Plug-in has been tested with JavaScript and VBScript.

Handling events

The value of the ID attribute of the OBJECT element in the HTML body is specified as the value of the FOR attribute. Authentic Browser Plug-in objects that are called must have a name that is this value.

For a list of events see also Events: Reference.

Subroutines

Subroutines can be created for any event that you wish to define in the HTML file. The Authentic Browser Plug-in object name must be the same as the value of the ID attribute of the OBJECT element in the HTML body. In the example above, the prefix is objPlugIn, which must be the value of the ID attribute of the OBJECT element.

The methods, properties, and sub-objects available in the Authentic Browser Plug-in are described in the reference section of this documentation.
3.2.3 IE Example 1: Simple

The HTML code below generates a page that has the following features:

- It installs the Trusted Unicode version of Authentic Browser on the client if this is not already installed.
- The body contains a window of 600px wide and 500px high into which the Authentic Browser is loaded.
- Below the Authentic Browser window is a row of four buttons.
- The Authentic View of OrgChart.xml is loaded.
- The Find and Replace buttons pop up the Find and Replace dialogs respectively.
- The Save button saves changes to a file called SaveFile.xml located in the root directory of the server.
- The Test Property button tests a simple property.

When this HTML page is opened on the client, the user can start editing the XML file OrgChart.xml and save the edited file as SaveFile.xml.

You may wish to use this simple HTML page to test whether Authentic Browser functions properly. If you do so, be sure to use the correct URLs to locate the CAB file, the xsd, xml, and sps files, and any other resources on the server. Note that case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of filenames and of commands in the code. You can expand or modify this example to build more complex solutions using Authentic Browser. Also see The OBJECT Element for details.

```html
<html>
<head>
  <meta http-equiv="Content-Type" content="text/html; charset=windows-1252">
  <title>Minimal XMLSpyDocEditPlugIn page</title>

  <!-- Script for handling the ControlInitialized event -->
  <SCRIPT LANGUAGE="javascript" FOR="objPlugIn" EVENT="ControlInitialized">
    objPlugIn.SchemaLoadObject.URL = "http://yourserver/OrgChart.xsd"
    objPlugIn.XMLDataLoadObject.URL = "http://yourserver/OrgChart.xml"
    objPlugIn.DesignDataLoadObject.URL = "http://yourserver/OrgChart.sps"
    objPlugIn.StartEditing()
  </SCRIPT>

  <!-- Script with subroutines -->
  <SCRIPT ID=clientEventHandlers LANGUAGE=vbscript>
    Sub OnClickFind
      objPlugIn.FindDialog
    End Sub

    Sub OnClickReplace
      objPlugIn.ReplaceDialog
    End Sub

    Sub BtnOnSave
      objPlugIn.XMLDataSaveUrl = "http://yourserver/SaveFile.xml"
      objPlugIn.Save
    End Sub

    Sub BtnOnTestProp
      If objPlugIn.IsRowInsertEnabled Then
        msgbox "true"
      End If
    End Sub
  </SCRIPT>
</head>
```

© 2018 Altova GmbH
Else
    MsgBox "false"
End If
End Sub
</SCRIPT>
</head>

<body>
<!-- Object element has id with value that must be used -->
<!-- as name of Authentic Browser Plug-in objects -->
<!-- Classid selects the Trusted Unicode version -->
<Object id="objPlugIn"
<!-- or 64-bit CAB file (AuthenticBrowserEdition_x64.CAB) -->
// CodeBase="http://yourserver/AuthenticBrowserEdition.CAB#Version=12,3,0,0"
<!-- Class Id for 32-bit and 64-bit CAB files is the same -->
// Classid="clsid:B4628728-E3F0-44a2-BEC8-F838555AE780" width="600"
height="500"></Object>
<p>
<input type="button" value="Find" name="B4" onclick="OnClickFind()">
<input type="button" value="Replace" name="B5" onclick="OnClickReplace()">
<input type="button" value="Save" name="B6" onclick="BtnOnSave()">
<input type="button" value="Test property" name="B7" onclick="BtnOnTestProp">
</p>
</body>
</html>
3.2.4 IE Example 2: Sort a Table

This is an example HTML page with an embedded JavaScript. The sample requires the Authentic Browser Plug-in (CAB file) to be installed on your computer. Note that case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of filenames and of commands in the code.

The code shows:

- How to access the browser plug-in. Modify the code to refer to your CAB file and the
  class identifier (CLSID) of your browser plug-in version (trusted or untrusted).
- How to load a file into the browser plug-in. Modify the code to refer to your sample
  document.
- Implement buttons for simple cursor positioning.
- Implement more complex commands like the sorting of tables.
- How to use the SelectionChanged event.

Also see The OBJECT Element for details.

```html
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=windows-1252">
<title>test page For Authentic Browser Plug-in</title>
<script language="javascript" For="objPlugIn" Event="ControlInitialized">
var strSampleRoot = "http://myRoot/myPath/myDocBaseName";
objPlugIn.SchemaLoadObject.URL = strSampleRoot + ".xsd";
objPlugIn.XMLDataLoadObject.URL = strSampleRoot + ".xml";
objPlugIn.DesignDataLoadObject.URL = strSampleRoot + ".sps";
objPlugIn.StartEditing();
</script>
<script id="clientEventHandlers" language="javascript">

  SelTable_LastXMLDataOffset.innerHTML = CurrentSelection.LastXMLDataOffset;
</SCRIPT>
</html>
3.3 Firefox

If the HTML page for the Authentic plug-in is to be opened in Firefox, then it must contain the following elements:

- An HTML `EMBED` element, which (i) causes the DLL for the Authentic Plug-in to be downloaded from the server to the client, and (ii) specifies the dimensions of the Authentic View window in the client’s browser. The `EMBED` element contains the location of the Authentic Browser plug-in.
- One or more Event Listeners for defining subroutines and handling events. Event listeners are constructed within `SCRIPT` elements.

This section is organized into the following sub-sections:

- **The EMBED Element**, which describes how the HTML `EMBED` element is to be used in an HTML page for the Authentic plug-in.
- **Adding Event Listeners**, which describes how Event Listeners are to be used in an HTML page for the Authentic plug-in.
- **Examples of full HTML pages**: Firefox Example 1: Simple and Firefox Example 2: Sort a Table.

For information about individual objects, see the respective Object descriptions in the Reference section.

**Note:**

- The Authentic Browser plug-in is supported for Firefox.
- Ensure that the MIME type for XPI and/or CRX files has been added in the browser service of your server to the list of MIME types for the site you will use.
### 3.3.1 The EMBED Element

The `EMBED` element has the following functions:

- It gives the Authentic Browser Plug-in a name (via the `id` attribute).
- It selects which version of the Authentic Browser Plug-in to use (via the `type` attribute).
- It specifies an XPI file or CRX file (which is the Authentic Browser Plug-in DLL) via the `PluginsPage` attribute. The value of the `PluginsPage` attribute is a path that locates the XPI or CRX file.
- It specifies the dimension of the Authentic View window in the client’s browser (via the `height` and `width` attributes).

Here is a sample HTML `EMBED` element. It selects the English-language Trusted version (with the value of the `type` attribute) and sets the width and height of the Authentic View window in the client’s browser to 100% and 60%, respectively.

```html
<embed
  id="objPlugIn"
  type="application/x-authentic-scriptable-plugin"
  width="100%"
  height="60%"
  PluginsPage="http://your-server-including-path/AuthenticFirefoxPlugin_trusted.xpi"
  [Name-Of-Parameter="Value of Parameter"] />
```

- **id**
  The value of the `id` attribute is used as the name of the Authentic Browser Plug-in objects when these are used in scripts. For example, `objPlugIn.SchemaLoadObject.URL` is a call to the object that loads the schema file.

- **type**
  This value is the MIME type of the required Authentic Browser version. In the code listing above, the value `application/x-authentic-scriptable-plugin` identifies the English-language Trusted version. See the section, Authentic Browser Versions for a list of the available versions and their MIME types.

- **width, height**
  These attributes specify the dimensions of the Authentic View window to be created within the browser window.

- **PluginsPage**
  The value of this attribute specifies the location of the Authentic Browser XPI file (for Firefox) on your server. Make sure that you use the correct path in the URL that locates the XPI file. Case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of paths and filenames.

- **LicServer**
  The name of the server for which the Authentic Browser Enterprise Edition license key is valid.

- **LicKey**
  The license key for validating the use of Authentic Browser Enterprise Edition.

- **LicCompany**
The company name for validating the use of Authentic Browser Enterprise Edition.

**Parameters**
A parameter *(see list below)* can be used in the following ways:

- By giving the parameter name and its value as an attribute-value pair of the `EMBED` element. For example, the parameter `ToolbarsEnabled` can be specified with a value of `true` by adding the attribute-value pair `ToolbarsEnabled="true"` to the `EMBED` element. See listing above.
- A `PARAM` element can be specified as a child of the `OBJECT` element, as in the example below:
  ```xml
  <object id="objPlugIn"
      type="application/x-authentic-scriptable-plugin"
      width="100%"
      height="60%" >
    <param name="ToolbarsEnabled"
      value="true"/>
  </object>
  ```
  Note, however, that there is a drawback if parameters are specified in this way—that is, as a child of the `OBJECT` element. Since Firefox does not accept the `PLUGINSPAGE` attribute of the `OBJECT` element, Firefox will have no reference to the Authentic Browser XPI file on the server and cannot start installation of the Authentic Browser plug-in on the client. Therefore, this way of specifying parameters is of use only on clients where the plug-in has already been installed.

**XMLDataURL**
An absolute URL that gives the location of the XML file to be edited. For the Untrusted versions, you can also use a full local path.

**XMLDataSaveURL**
An absolute URL that gives the location where the XML file is to be saved. For the Untrusted versions, you can also use a full local path.

**SPSDataURL**
An absolute URL that gives the location of the StyleVision Power Stylesheet *(sps file)*. For the Untrusted versions, you can also use a full local path.

**SchemaDataURL**
An absolute URL that gives the location of the associated schema file. For the Untrusted versions, you can also use a full local path.

**TextStateBmpURL**
The folder where bitmap image for text-state icons are to be stored.

**TextStateToolbarLine**
The toolbar line in which text-state icons are to be placed. The default is 1.

**AutoHideUnusedCommandGroups**
Determines whether unused toolbar command groups should be hidden. The default is True.

**ToolbarsEnabled**
Specifies general support for toolbars. The default is True.
**ToolbarTooltipsEnabled**
Specifies whether Tooltips are enabled or not.

**HideSaveButton**
If set to True, removes the Save button from the Authentic toolbar, which is visible by default.

**BaseUrl**
Gives the base URL for use with relative paths.

**SaveButtonUsePOST**
If set to True, the HTTP POST command is used instead of a PUT when saving the document.

**EntryHelpersEnabled**
If set to True the Authentic entry helpers are visible

**EntryHelperSize**
Width of the entry helper window in pixels.

**EntryHelperAlignment**
Specifies the location of the entry helpers relative to the document window.

- 0 = Align toolbar at top of document
- 1 = Align toolbar at left of document
- 2 = Align toolbar at bottom of document
- 3 = Align toolbar at right of document

**EntryHelperWindows**
Selects which of the entry helper sub-windows are visible.

- 1 = Elements
- 2 = Attributes
- 4 = Entities

Any combination is allowed (bit-check)

**SaveButtonAutoEnable**
See `Authentic.SaveButtonAutoEnable`

**LoaderSettingsFileURL**
Gives the URL of the `LoaderSettingsFile` for package management.
### 3.3.2 Adding Event Listeners

The following `SCRIPT` element defines an event listener and registers it with the plug-in object. The event listener function will be called each time the specified event is triggered inside the plug-in.

```javascript
<SCRIPT LANGUAGE="javascript">
    var selCount = 0;
    function OnSelectionChanged()
    {
        selCount = selCount + 1;
        selectionCounter.value = "SelectionCount = " + selCount;
    }
    var objPlugIn = document.getElementById('objPlugIn');
    objPlugIn.addEventListener("selectionchanged", OnSelectionChanged, false)
</SCRIPT>
```

For a list of events see also [Events: Reference](#).

**Language**
The Authentic Browser Plug-in has been tested with JavaScript and VBScript.

**Event listeners**
For information about event listeners, see the relevant [W3C Recommendation](#).

**Authentic Browser object model**
The methods, properties, and sub-objects available in the Authentic Browser Plug-in are described in the [reference section](#) of this documentation.
3.3.3 Firefox Example 1: Simple

The HTML code below generates a page that has the following features:

- It installs the Trusted version of Authentic Browser for Firefox on the client if this is not already installed.
- The Authentic Browser window within the page has a width that is 100% of the browser window and 60% of its height.
- Below the Authentic Browser window is a row of four buttons.
- The Authentic View of OrgChart.xml is loaded.
- The Find and Replace buttons pop up the Find and Replace dialogs respectively.
- The Save button saves changes to a file called SaveFile.xml located in the root directory of the server.
- The Test Property button tests a simple property.

When this HTML page is opened on the client, the user can start editing the XML file OrgChart.xml and save the edited file as SaveFile.xml.

You may wish to use this simple HTML page to test whether Authentic Browser functions properly. If you do so, be sure to use the IP Address and the correct path to the respective files in the URLs that locate the the XPI file, the xsd, xml, and sps files, and any other resource on the server. Note that case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of filenames and of commands in the code. You can expand or modify this example to build more complex solutions using Authentic Browser.

```html
<html>
<head>
  <meta http-equiv="Content-Type" content="text/html; charset=windows-1252">
  <title>Minimal Authentic Browser PlugIn page</title>
</head>

<!-- to disable the fast-back cache in Firefox, define an unload handler -->
<BODY id="bodyId" onunload="unload()">
<!-- Embed element has id with value that must be used -->
<!-- as name of Authentic Browser Plug-in objects -->
<!-- type selects the Trusted unicode version -->
<embed
    id="objPlugIn"
    type="application/x-authentic-scriptable-plugin"
    width="100%"
    height="60%"
    PLUGINSPAGE="http://your-server-including-path/AuthenticFirefoxPlugin_trusted.xpi"
    LicServer="DevAuthBrowTest"
    LicCompany="Altova"
    LicKey="XXXXXXXX" />
<!-- Script with subroutines -->
<SCRIPT LANGUAGE="javascript">
    var objPlugIn = document.getElementById('objPlugIn');
    function onClickFind()
    {
        objPlugIn.FindDialog();
    }
    function onClickReplace()
    {
```
```javascript
objPlugIn.ReplaceDialog();

function BtnOnSave()
{
    objPlugIn.XMLDataSaveUrl = "http://your-server/Authentic/
SaveFile.xml"
    objPlugIn.Save()
}

function BtnOnTestProp()
{
    alert ( objPlugIn.IsRowInsertEnabled );
}

function Unload()
{
}

function InitAuthenticPluginPage()
{
    var serverstr='your-server/';
    var basedir='Authentic/
    objPlugIn.SchemaLoadObject.URL = 'http://' + serverstr + basedir +
    'OrgChart.xsd';
    objPlugIn.XMLDataLoadObject.URL = 'http://' + serverstr + basedir +
    'OrgChart.xml';
    objPlugIn.DesignDataLoadObject.URL = 'http://' + serverstr +
    basedir + 'OrgChart.sps';
    objPlugIn.StartEditing();
}

// event subscription if running on Firefox
objPlugIn.addEventListener("ControlInitialized", InitAuthenticPluginPage,
false);
</SCRIPT>
<br>
<input type="button" value="Find" name="B4" onclick="OnClickFind()">
<input type="button" value="Replace" name="B5" onclick="OnClickReplace()">
<input type="button" value="Save" name="B6" onclick="BtnOnSave()"
onclick="BtnOnTestProp()">
</p>
</body>
</html>

**Note:** The script above contains license information for activating Authentic Browser Enterprise Edition.
3.3.4 Firefox Example 2: Sort a Table

This is an example HTML page with an embedded JavaScript. The sample requires the Authentic Browser Plug-in (XPI file) to be installed on your computer. Note that case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of filenames and of commands in the code.

The code shows:

- How to access the browser plug-in. Modify the code to refer to your XPI file and the class identifier (MIME Type) of your browser plug-in version (trusted or untrusted).
- How to load a file into the browser plug-in. Modify the code to refer to your sample document.
- Implement buttons for simple cursor positioning.
- Implement more complex commands like the sorting of tables.
- How to use the `SelectionChanged` event.

```html
<html><head><meta http-equiv="Content-Type" content="text/html; charset=windows-1252"><title>Test Page For Authentic Browser Plug-in</title>
</head> <!-- to disable the fast-back cache in Firefox, define an unload handler -->
<BODY id="bodyId" onunload="Unload()">
<embed
id="objPlugIn"
type="application/x-authentic-scriptable-plugin"
width="100%" height="60%"
PLUGINSPAGE="http://your-server-including-path/AuthenticFirefoxPlugin_trusted.xpi"
EntryHelpersEnabled="TRUE"
SaveButtonAutoEnable="TRUE" />
</embed>
<TABLE><SCRIPT LANGUAGE="javascript">
var objCurrentRange = null;
var objPlugIn = document.getElementById('objPlugIn');

function BtnDocumentBegin() { objPlugIn.AuthenticView.DocumentBegin.Select(); }
function BtnDocumentEnd() { objPlugIn.AuthenticView.DocumentEnd.Select(); }
function BtnWholeDocument() { objPlugIn.AuthenticView.WholeDocument.Select(); }
function BtnSelectNextWord() { objPlugIn.AuthenticView.Selection.SelectNext(1).Select(); }

function BtnSortDepartmentOnClick() {

</html>
3.4 **Browser-Independent**

In some projects, it may not be known what browser (Internet Explorer or Firefox) will be used on the client. In such cases, Authentic Browser versions for both Internet Explorer and Firefox can be stored on the server (that is, both the CAB file and XPI file can be stored on the server). In the HTML page you can insert a script to determine which browser has been used to open the HTML page, and accordingly cause the correct Authentic Browser Plug-in to be loaded.

Additionally, if Internet Explorer is the browser that is used on the client, then the correct .CAB file (for 32-bit or 64-bit Internet Explorer) must be selected for download from the server. A script can test for the X-bit version of Internet Explorer and select the correct .CAB file for download from the server.

This section contains an example file, which does the following: determines the browser, loads the correct Authentic Browser version, and carries out a few functions.

For information about individual objects, see the respective Object descriptions in the Reference section.

**Note:**

- The Authentic Browser plug-in is supported for *Internet Explorer 5.5 or higher, Mozilla Firefox*
- For Firefox usage, ensure that the MIME type for XPI files has *been added in the browser service* of your server to the list of MIME types for the site you will use.
3.4.1 Browser-Independent Example

The HTML code below generates a page that has the following features:

- It checks what browser is installed on the client (Internet Explorer, Firefox) and installs an Authentic Browser version for the detected browser type.
- Furthermore, if the installed browser is Internet Explorer, then it checks whether the system is 32-bit or 64-bit, and then selects the correct .CAB file (for 32-bit or 64-bit Internet Explorer).
- The Authentic Browser window within the page has a width that is 100% that of the browser window and 60% of its height.
- Below the Authentic Browser window is a row of five buttons
- The Start Editing button loads the Authentic View of OrgChart.xml, which is in the root directory of your server
- The Find and Replace buttons pop up the Find and Replace dialogs respectively
- The Save button saves changes to a file called SaveFile_OrgChart.xml located in the root directory of the server
- The Test property button tests a simple property

When this HTML page is opened on the client, the user can start editing the XML file OrgChart.xml and save the edited file as SaveFile_OrgChart.xml.

You may wish to use this simple HTML page to test whether Authentic Browser functions properly. If you do so, be sure to use the IP Address and the correct path to the respective files in the URLs that locate the XPI file, the xsd, xml, and sps files, and any other resource on the server. Note that case-sensitivity might be an issue with some servers, so if there is a problem locating a file, check the casing of filenames and of commands in the code. You can expand or modify this example to build more complex solutions using Authentic Browser.

                         '</OBJECT> ');
    }
Note: The script above contains license information for activating Authentic Browser Enterprise Edition.
4 Extension Packages for On-Demand Installation

If on-demand installation of the Authentic Browser plug-in is planned, the zipped Authentic Browser extension package/s (CAB, XPI, and/or CRX file/s) must be stored on the server. When the HTML page for Authentic Plug-in is accessed in the client browser for the first time, instructions in the HTML page cause the relevant extension package to be downloaded from the server to the client, unzipped, and installed on the client.

The required Authentic Browser extension package/s for on-demand installation can be downloaded from the Altova website. They must be stored on the server as a zipped (CAB, XPI, or CRX) file. Whether you store a CAB, XPI, or CRX file on the server depends upon which browser is used on the client to open the HTML page for Authentic Plug-in.

If a client may use multiple browsers or any browser (Internet Explorer or Firefox), then two or all three extension packages (CAB, XPI, and CRX files) should be stored on the server. If the client browser is not known, you could include a script in the HTML page for Authentic Plug-in to detect which browser is currently being used. The appropriate file (CAB for Internet Explorer; XPI for Firefox) will then be downloaded automatically from the server to the client. For information about this scenario, see HTML Page for Authentic Plug-in | Browser-Independent.

CAB files for Internet Explorer are available for 32-bit IE browsers and 64-bit IE browsers. Again, you may wish to store both types of CAB file (32-bit and 64-bit) on the server. The HTML page for Authentic Plug-in could have a script that determines whether the browser is a 32-bit or 64-bit version and then downloads the correct CAB file. How to create such a script is described in the section, HTML Page for Authentic Plug-in | Browser-Independent.

**Downloading and storing the CAB/XPI/CRX file**

The CAB file, XPI file, and/or CRX file is to be downloaded from the Altova Website and can be downloaded to any location on your server. If you are deploying the Enterprise edition of Authentic Browser, then the package must be stored on the server for which the Enterprise license has been registered.

All three types of installer file (CAB, XPI, CRX) are zipped file formats. Do not unzip these files. The file extraction and installation on the client takes place automatically when the client opens the HTML page for Authentic Plug-in for the first time. The location of the CAB/XPI/CRX file on the server is specified in the HTML page for Authentic Plug-in.
Chapter 5

Client Setup
Client Setup

The client machine is the machine on which the HTML Page for Authentic Plug-in is opened and on which the Altova Authentic XML page is edited. To achieve this functionality, the Authentic Browser plug-in must be installed as an add-on in the client browser that will be used to open the HTML Page for Authentic Plug-in.

The Authentic Browser plug-in can be installed in the client browser automatically from the server when the HTML Page for Authentic Plug-in is opened in the client browser. Alternatively, the Authentic Browser plug-in can be installed directly in the client browser, either manually or by using a centrally administered MSI-based push system.

This section describes how to set up the client machine for these functions. It describes the following:

- The Internet browser requirements for enabling Authentic Browser functionality.
- The different methods of installing the Authentic Browser plug-in as an add-on in supported browsers on the client machine. It also describes how to upgrade and de-install the Authentic Browser plug-in.
- IE9 Security Settings to allow the proper functioning of the plug-in.
- IE10 Security Settings to allow the proper functioning of the plug-in. Note that, for Authentic Browser plug-in to be allowed in Internet Explorer 10, the IE 10 mode should be set to Compatible Mode.
1 Browser Requirements

For a client machine to display an Altova Authentic XML page, it requires an Internet browser that allows plug-ins. Since a number of browser providers discontinued support for the NPAPI architecture, Authentic Browser Edition is currently supported only on Microsoft Internet Explorer 32-bit version 9 and newer. If you wish to use another Internet browser, you will need to use an older version that supports plug-ins.

The list below provides information about support levels for Authentic Browser plug-in among the major Internet browsers.

- **Microsoft Internet Explorer 32-bit version 9 and newer** support Authentic Browser.
- **Microsoft Internet Explorer 64-bit** version 9 is the last 64-bit version that can be used. Versions newer than that are Microsoft Edge.
- **Microsoft Edge** does not support Authentic Browser since it never supported ActiveX controls as plug-ins.
- **Firefox version 26.0** is the last to offer NPAPI support, and versions up to 26.0 (latest preferable) can be used for Authentic Browser.
- **Google Chrome version 44** is the last to offer NPAPI support, and versions up to 44 (latest preferable) can be used for Authentic Browser.

**Note:** Internet Explorer must be installed because the Authentic View interface (which will be displayed within the browser window) is generated using Internet Explorer.
2 Authentic Browser Plug-in

This section describes the various ways in which Authentic Browser can be installed on a client machine, as well as how the plug-in can be upgraded and de-installed.

- Installation on Demand
- Manual Installation via Extension Packages
- Manual Installation via MSI
- Push Installation using MSI
- Automatic Updates
- De-installation, Disabling

Installation of multiple versions
There are several versions of Authentic Browser. For each supported language (English, German, Spanish, Japanese), separate trusted and untrusted versions are available for each supported browser (Microsoft Internet Explorer 32-bit and 64-bit, Mozilla Firefox).

One, some, or all of these versions of the Authentic Browser plug-in can be installed on a client machine. Each will be displayed as a separate plug-in in the browser's Add-on Manager.

For more information about versions, see Authentic Browser Versions.
2.1 Installation on Demand

The best way of installing the Authentic Browser plug-in is to have it automatically installed when needed. This mechanism works as follows:

1. The extension packages (CAB, XPI, and/or CRX file/s) are stored on the server.
2. When the HTML page for Authentic Plug-in is opened in the client's browser, instructions in the HTML page download the relevant extension package and install the Authentic Browser plug-in in the client browser.

The instruction in the HTML page will be different for different browsers.

For Internet Explorer
Use the CODEBASE attribute of the OBJECT element to specify the URL of the CAB file. See the example for Internet Explorer for details.

For Mozilla Firefox
Use the pluginspage attribute of the embed element to specify the URL of the XPI file. See the example for Firefox for details.

Alternative method for Mozilla Firefox
Add a link that points to the extension package and, when clicked, will install the plug-in. For example: `<a href="plugin.crx">Click to install Authentic Browser extension</a>.

See the section, Extension Packages for On-Demand Installation, for information about server-side setup of the extension packages.

For information about versions, see Authentic Browser Versions
2.2 Manual Installation via Extension Packages

In some browsers, the Authentic Browser plug-in can also be installed manually.

**Internet Explorer**
There is no way to manually install an Internet Explorer add-on contained in a CAB file. Use Manual Installation via MSI.

**Firefox**
Drag and drop the XPI file into the Firefox window. The Add-on Manager (Tools | Add-ons | Extensions) should display the Authentic Browser plug-in in its list of installed extensions.

For information about versions, see Authentic Browser Versions.
2.3 Manual Installation via MSI

You can download an MSI installer (Microsoft Windows Installer) file for Authentic Browser from the Altova website. This file is an executable installer file (with a .exe extension) that installs the Authentic Browser plug-in in all the supported browsers (Microsoft Internet Explorer 32-bit and 64-bit, Mozilla Firefox) currently installed on the client machine.

**Installation**

Download the MSI installer file to the client machine and double-click it to start the installation. The plug-in will be installed (by default to the folder: C:\Program Files (x86)\Altova\AuthenticBrowserPlugin\...) and integrated in the currently installed supported browsers in one step. Selective installation for different browsers is possible via the Custom Installation dialog. The Add/Remove Programs list on a client machine will show the installed browser edition.

**MSI versions**

There is an MSI installer file for each supported language (English, German, Spanish, Japanese), each trusted/untrusted type, and each 32-bit/64-bit browser-type. So, for example, there will be one MSI installer file for English Trusted 32-bit browsers, another for English Trusted 64-bit browsers, another for English Untrusted 32-bit browsers, and so on.

For more information about versions, see Authentic Browser Versions.
2.4 Push Installation using MSI

Where installation of new software is managed by a central IT team and installers are pushed out within an administration framework, installation via a native MSI installer (Microsoft Windows Installer) is an advantage. This is especially true for Internet Explorer where installation of a plug-in requires administration rights.

You can download an MSI installer (Microsoft Windows Installer) file for Authentic Browser from the Altova website. This file is an executable installer file (with a .exe extension) that installs the Authentic Browser plug-in in all the supported browsers currently installed on the client machine. Currently supported browsers are: Microsoft Internet Explorer 32-bit and 64-bit, Mozilla Firefox.

**Installation**

Download the MSI installer file to the administration server and include it in your administrative procedures for installing to client machines. The plug-in will be installed (by default to the folder: C:\Program Files (x86)\Altova\AuthenticBrowserPlugin\...) and integrated in the currently installed supported browsers in one step. Selective installation for different browsers is possible via the Custom Installation dialog.

For silent installation, use the command line input parameter /q.

The Add/Remove Programs list on a client machine will show the installed browser edition.

**MSI versions**

There is an MSI installer file for each supported language (English, German, Spanish, Japanese), each trusted/untrusted type, and each 32-bit/64-bit browser-type. So, for example, there will be one MSI installer file for English Trusted 32-bit browsers, another for English Trusted 64-bit browsers, another for English Untrusted 32-bit browsers, and so on.

For more information on versions, see [Authentic Browser Versions](#).
2.5 **Automatic Updates**

The availability of Authentic Browser upgrades and the installation of these updates varies according to browser.

**Internet Explorer**

The `codebase` attribute value of the `object` element in the [HTML Page for Authentic Plug-in](#) can be suffixed with `#Version=...` to indicate the version number of the plug-in available on the server. If the version of the plug-in installed on the user's machine is less than that version, the user will be asked if the plug-in should be upgraded.

**Firefox**

The standard mechanism for updating Firefox extensions is as follows. The `install.rdf` file in the Firefox extension contains a link to an `update.rdf` file on a download server. The `install.rdf` file specifies the version installed on the user's machine. The `update.rdf` file lists the versions and extension files available for download on the server. If newer versions are available for download, the user will be informed.

This is currently not supported.
2.6 De-installation, Disabling

If installation has been via MSI, then the Add/Remove Programs list on a client machine will show the installed browser edition. If you uninstall the product via the Add/Remove Programs list, the plug-in will be removed from the browser and from the MSI list.

When a plug-in is installed in a browser, it is displayed as enabled in the browser's Add-on Manager. If you remove the plug-in from the browser's Add-on Manager, the plug-in will be disabled but stays on disk.
3 IE9 Security Settings

If the Untrusted version of Authentic Browser is being used in Internet Explorer 9, you might get the following error message:

*Internet Explorer blocked an ActiveX control, so this page might not display correctly.*

To enable ActiveX controls, you must set the relevant security option in the Internet Options of Internet Explorer. Do this as follows:

1. Open the Internet Options dialog (*screenshot below*) of Internet Explorer by clicking the menu command **Tools | Internet Options**.

![Internet Options dialog](screenshot)

2. Select the Security tab (*see screenshot above*), then the zone for which you wish to make the setting (Internet or Local intranet).
3. Next, click the **Custom Level** button. This pops up the Security Settings dialog (*screenshot below*).

![Security Settings dialog](screenshot)

© 2018 Altova GmbH
4. Scroll down to the ActiveX controls and plug-ins section, and within this to the setting Initialize and script ActiveX controls not marked as safe for scripting. Select the Prompt option (see screenshot above).

5. Restart Internet Explorer for the new setting to take effect.

From now onwards, each time an HTML Page for Authentic Plug-in attempts to load an ActiveX file, Internet Explorer will prompt you about whether you wish to load the control or not.
4 IE10 Security Settings

Internet Explorer 10 (IE10) has two browser modes:

- Metro-style, which runs Enhanced Protection Mode security, and
- Desktop, which runs Compatible Mode security.

To run Authentic Browser plug-in, you must set IE10 to Compatible mode (Tool | Options | Security).
User Reference

This section contains a listing and description of Authentic Browser mechanisms, objects, and enumerations.

- Authentic Browser Mechanisms
- Authentic Browser Objects
- Authentic Browser Enumerations
1 Mechanisms

This section contains a description of some commonly used Authentic Browser mechanisms.
### 1.1 Events: Connection Point (IE-Specific)

Authentic Browser provides various connection point events (see also Events: Reference), for which you can provide event handlers in the **SCRIPT** blocks on your HTML page.

**Note:** The description in this section applies to Internet Explorer only.

The following samples show **SCRIPT** blocks for the **ControlInitialized** and **SelectionChanged** events:

**ControlInitialized**
This connection point event is triggered immediately after the control is created and initialized. Additional startup scripting for the control can be handled inside the **ControlInitialized** event handler.

```
<SCRIPT LANGUAGE=javascript FOR=objPlugIn EVENT=controlinitialized>
    // add your code here
</SCRIPT>
```

**SelectionChanged**
The **SelectionChanged** event is triggered each time the current selection in the view changes. Use a **SCRIPT** block to execute your event-specific code.

```
<SCRIPT LANGUAGE=javascript FOR=objPlugIn EVENT=selectionchanged>
    // add your code here
</SCRIPT>
```

Please note that the **Authentic.event** object is not populated when this event occurs. If event handlers are registered in your script, the **Authentic.event** object properties contain values from the last event to have occurred.

The **Authentic.CurrentSelection** object now contains valid information.

**Loading SPS, XSD, and XML files without user intervention**
If you wish to load the **.sps**, **.xsd** and **.xml** files without user intervention when loading the HTML page, it is the preferred method to write an event handler that handles the **ControlInitialized** event. Alternatively a property bag can be used as in the second example:

**Recommended:**

```
<SCRIPT LANGUAGE="javascript" FOR=objPlugIn EVENT="ControlInitialized">
    objPlugIn.SchemaLoadObject.URL = "http://yourserver/OrgChart.xsd"
    objPlugIn.XMLDataLoadObject.URL = "http://yourserver/OrgChart.xml"
    objPlugIn.DesignDataLoadObject.URL = "http://yourserver/OrgChart.sps"
    objPlugIn.StartEditing()
</SCRIPT>
```

or
It is not recommended to load these files in an event handler that handles the "body" elements "onload" event as the Authentic Browser PlugIn control may be initialized after the "onload" event is fired. If this is the case the PlugIn's methods and properties will not be available, and the files will not load. Also see The OBJECT Element for details.

Not recommended:

<SCRIPT LANGUAGE="javascript">
    function load () {

        objPlugIn.SchemaLoadObject.URL = "http://yourserver/OrgChart.xsd"
        objPlugIn.XMLDataLoadObject.URL = "http://yourserver/OrgChart.xml"
        objPlugIn.DesignDataLoadObject.URL = "http://yourserver/OrgChart.sps"
        objPlugIn.StartEditing()
    }
</SCRIPT>

<body onload = "load files">
1.2 Events: Adding Event Listeners (Firefox-specific)

For each connection point event Authentic Browser provides (see also Events: Reference) you can write event handlers in the SCRIPT blocks on your HTML page by using the addEventListener method.

**Note:** The description in this section applies to Firefox only.

Here is an example on how to provide an event handler for the SelectionChanged event in Firefox:

**SelectionChanged**
The SelectionChanged event is triggered each time the current selection in the view changes. Use a SCRIPT block to execute your event-specific code.

```javascript
<SCRIPT LANGUAGE="javascript">
var selCount = 0;
function OnSelectionChanged()
{
    selCount = selCount + 1;
    selectionCounter.value = "SelectionCount = " + selCount;
}
var objPlugIn = document.getElementById('objPlugIn');
objPlugIn.addEventListener("selectionchanged", OnSelectionChanged, false)
</SCRIPT>
```

Please note that the Authentic.event object is not populated when this event occurs. If event handlers are registered in your script, the Authentic.event object properties contain values from the last event to have occurred.

The Authentic.CurrentSelection object now contains valid information.
1.3 **Events: Toolbar Button**

Each toolbar button has default behavior, which may need to be changed. The `AuthenticCommand` event allows you to add additional tasks to, or entirely redefine, the default behavior of toolbar buttons. Scripts can use the `AuthenticCommand` event to receive notification each time the user clicks a toolbar icon.

Please note that not every command (from the `Authentic.UICommands` collection) has its own associated event. To find out which icon the user clicked, the script has to check the `AuthenticEvent.srcElement` property, which contains a reference to a corresponding `AuthenticCommand` object.

**Example**

```javascript
// event handler for OnDocEditCommand
<SCRIPT LANGUAGE=javascript FOR=objPlugIn EVENT=doceditcommand>
  // we are interested in the k_CommandSave button
  if (objPlugIn.event.srcElement.CommandID == 1) {
    // instead of the standard HTTP PUT we want to use
    // a HTTP POST
    objPlugIn.SavePOST();

    // no standard execution follows
    objPlugIn.event.cancelBubble = true;
  }
</SCRIPT>
```

**Reference**

# 1.4 Events: Reference

List of connection point events

<table>
<thead>
<tr>
<th>Name</th>
<th>since TypeLib</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SelectionChanged</td>
<td>1.0</td>
<td>Selection in the editor has changed. The Authentic.CurrentSelection object now contains valid information. The properties of the Authentic.event object are not set.</td>
</tr>
<tr>
<td>ControlInitialized</td>
<td>1.2</td>
<td>The control is now fully loaded and initialized. The properties of the Authentic.event object are not set.</td>
</tr>
<tr>
<td>dragover</td>
<td>1.8</td>
<td>A drag-over operation is occurring.</td>
</tr>
<tr>
<td>drop</td>
<td>1.8</td>
<td>A drop operation has happened.</td>
</tr>
<tr>
<td>keydown</td>
<td>1.8</td>
<td>A key has been pressed but not yet released.</td>
</tr>
<tr>
<td>keyup</td>
<td>1.8</td>
<td>A key on the keyboard has been released. This is usually the event to react on keystrokes.</td>
</tr>
<tr>
<td>keypressed</td>
<td>1.8</td>
<td>Raised on any keyboard input.</td>
</tr>
<tr>
<td>mousemove</td>
<td>1.8</td>
<td>The mouse pointer has been moved.</td>
</tr>
<tr>
<td>buttonup</td>
<td>1.8</td>
<td>One of the mouse buttons has been released.</td>
</tr>
<tr>
<td>buttondown</td>
<td>1.8</td>
<td>One of the mouse buttons has been pushed.</td>
</tr>
<tr>
<td>contextmenu</td>
<td>1.8</td>
<td>Sent after receiving WMCONTEXTMENU.</td>
</tr>
<tr>
<td>editpaste</td>
<td>1.8</td>
<td>Called before a paste operation takes place.</td>
</tr>
<tr>
<td>editcut</td>
<td>1.8</td>
<td>Called before a cut operation takes place.</td>
</tr>
<tr>
<td>editcopy</td>
<td>1.8</td>
<td>Called before a copy operation takes place.</td>
</tr>
<tr>
<td>editclear</td>
<td>1.8</td>
<td>Called before a clear operation takes place.</td>
</tr>
<tr>
<td>doceditcommand</td>
<td>1.8</td>
<td>Raised on executing an Authentic command and to implement a custom command handler. See also Events: ToolbarButtons. The properties of the Authentic.event object are not set.</td>
</tr>
<tr>
<td>buttondoubleclick</td>
<td>1.8</td>
<td>One of the mouse buttons has been double-clicked.</td>
</tr>
</tbody>
</table>

If no exception is mentioned in the description the properties of the Authentic.event object are set on calling the event handler.

**Note:** These event-handlers are synchronous, that is, they are called immediately when the event occurs.
1.5 Accessing and Modifying Document Content

To access and modify document content, you can use the AuthenticRange, AuthenticView, and Authentic objects (and their properties and methods).

Where there is a functionality overlap between the AuthenticRange and AuthenticView interface on the one hand and the interface provided by the Authentic object on the other, the AuthenticRange and AuthenticView interface is the preferred interface. The overlapping functionality of the Authentic object is being phased out and will be obsolete in a future version.
1.6 Editing Operations

When XML data is displayed in Authentic View, it is possible to manipulate individual elements using the standard editing operations of cut, copy, and paste. However, not all the XML data elements may be edited. It is therefore necessary to first test whether editing is possible. The mechanism used is as follows: First, check whether the particular editing operation is enabled; if it is, then call the method to perform that editing operation. The only method that does not have a test is the method `EditSelectAll`, which automatically selects all elements displayed in the document.

The following is a list of properties and methods that perform editing operations. Each property returns a boolean value. The methods have no parameter.

<table>
<thead>
<tr>
<th>Property</th>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsEditUndoEnabled</td>
<td><code>Authentic.EditUndo</code></td>
<td>Undo an editing operation</td>
</tr>
<tr>
<td>IsEditRedoEnabled</td>
<td><code>Authentic.EditRedo</code></td>
<td>Redo an editing operation</td>
</tr>
<tr>
<td>IsEditCopyEnabled</td>
<td><code>Authentic.EditCopy</code></td>
<td>Copy the selected text to the clipboard</td>
</tr>
<tr>
<td>IsEditCutEnabled</td>
<td><code>Authentic/EditCut</code></td>
<td>Cut the selected text to the clipboard</td>
</tr>
<tr>
<td>IsEditPasteEnabled</td>
<td><code>Authentic/EditPaste</code></td>
<td>Paste clipboard text to current cursor position</td>
</tr>
<tr>
<td>IsEditClearEnabled</td>
<td><code>Authentic/EditClear</code></td>
<td>Clear the selected text from the XML document</td>
</tr>
</tbody>
</table>
1.7 Find and Replace

The Authentic.FindDialog method, opens a Find dialog box, in which the user can enter a search term. The Authentic.FindNext method allows the next instance of the same item to be found. The FindNext method can be tested using the boolean property IsFindNextEnabled. A variation of the FindDialog method is the Authentic.ReplaceDialog method. This operation finds a specific item, and is used to replace it with a specific value entered by the user in the Replace dialog box. If the FindNext method is then called, the next item is found and replaced.
1.8 Row Operations

In Authentic View, a repeating element structure may be created as a dynamic table, in which each row represents an instance of the repeated element. Once a dynamic table is created, the Authentic View user can manipulate the rows and their data. These row operations can be carried out with the use of a script.

If an external script is to perform row operations then two steps must occur:

- The first step checks whether the row that the cursor is in uses a property. A property, such as IsRowInsertEnabled, is used and returns a True or False value.
- If the return value is True, then the required row method can be called.

The following is a list of properties and methods that perform row operations. Each property returns a boolean, and the methods have no parameter.

<table>
<thead>
<tr>
<th>Property</th>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsRowInsertEnabled</td>
<td>Authentic.RowInsert</td>
<td>Row insertion operation.</td>
</tr>
<tr>
<td>IsRowAppendEnabled</td>
<td>Authentic.RowAppend</td>
<td>Append row operation.</td>
</tr>
<tr>
<td>IsRowDeleteEnabled</td>
<td>Authentic.RowDelete</td>
<td>Delete row operation.</td>
</tr>
<tr>
<td>IsRowMoveUpEnabled</td>
<td>Authentic.RowMoveUp</td>
<td>Move the XML data up one row.</td>
</tr>
<tr>
<td>IsRowMoveDownEnabled</td>
<td>Authentic.RowMoveDown</td>
<td>Move the XML data down one row.</td>
</tr>
<tr>
<td>IsRowDuplicateEnabled</td>
<td>Authentic.RowDuplicate</td>
<td>Duplicate the current row.</td>
</tr>
</tbody>
</table>
1.9  Shortcut Keys

The following shortcut keys are valid if the Authentic Browser has the input focus:

CTRL + P  Print document
CTRL + Z  Undo
CTRL + Y  Redo
CTRL + X  Cut
CTRL + C  Copy
CTRL + V  Paste
CTRL + A  Select all
CTRL + F  Open Find dialog box
CTRL + H  Open Find-Replace dialog box
1.10 Text State Buttons

The Authentic View toolbar of Authentic Browser provides support for text state icons. These are icons that insert elements having pre-defined text-formatting properties. To be able to use this function, the element that is to be created as a text state icon must be:

- declared as a global template in the schema, and
- the SPS must contain the necessary definitions (see the StyleVision documentation)

The Plug-in needs to have the path to the .bmp that will be used as the text state icon or custom button in the toolbar. This URL to the icon's image file is provided as the value of the Authentic.TextStateBmpURL.
1.11 Entry Helpers

The Authentic Browser enables you to provide entry helper windows as in XMLSpy. This provides the Authentic View user ready access to the elements, attributes, and entities allowed at any location in the document. The entry helpers are disabled by default and do not appear unless they are explicitly activated. To enable entry helpers, use the following `PROPERTYBAG` parameters in the `OBJECT` tag (Internet Explorer) or as an attribute of the `EMBED` element (Firefox):

- `EntryHelpersEnabled` TRUE / FALSE
- `EntryHelperSize` Size in pixels
- `EntryHelperAlignment` Takes `SPYAuthenticToolbarAlignment` values
- `EntryHelperWindows` Takes `SPYAuthenticEntryHelperWindows` values. Any combination is allowed (bit-check)

Instead of using the parameters in the `OBJECT` or `EMBED` tags you can also use properties and methods in the API:

Properties

- `Authentic.EntryHelpersEnabled`
- `Authentic.EntryHelperAlignment`
- `Authentic.EntryHelperSize`
- `Authentic.EntryHelperWindows`

Method

- `Authentic.RedrawEntryHelpers`
1.12 Packages

Authentic Browser Plug-in supports packages that extend program module functionality.

Packages are stored on the server and are installed locally (on the client) on demand via the Authentic Browser GUI. Once a package is installed locally, it is activated on every startup until the user removes it.

Currently, Authentic Browser supports spellchecker packages.

This section is organized into two parts:

- Working with packages, which describes how the packages mechanism works
- Spellchecker packages, which explains how spellchecker packages are to be stored on the server and how they are installed and used
1.12.1 Working with Packages
Packages are stored on the server and are installed locally (on the client), on demand via the Authentic Browser GUI. Once a package is installed locally, it is activated on every startup until the user removes it.

Package management
Package management is an Authentic Browser functionality that gives the Authentic Browser user control over available packages. This functionality is available via the Package Management dialog.

To enable package management functionality, you must use the LoaderSettingsFileURL parameter in the HTML Page for Authentic Plug-in. This parameter specifies the URL of the LoaderSettings file for package management (which can reside at any accessible location):

- In an HTML page for Internet Explorer, the LoaderSettingsFileURL parameter is used as a child PARAM element of the OBJECT element:

  <OBJECT>
  ...  
  <PARAM NAME="LoaderSettingsFileURL" VALUE="http://www.server.com/AuthenticFiles/XMLSpyPlugInLoaderSettings.xml"/>
  </OBJECT>

- In an HTML page for Firefox, the LoaderSettingsFileURL parameter is used as an attribute of the EMBED element:

  <EMBED ...
  LoaderSettingsFileURL="http://www.server.com/AuthenticFiles/XMLSpyPlugInLoaderSettings.xml"/>

The LoaderSettings file contains the definitions of the packages, along with the URLs of the respective packages. Given below is the listing of a LoaderSettings file.

Example of a LoaderSettings XML file
The document element of the LoaderSettings XML file is loadersettings (see listing below). This element can contain multiple child package and/or multiple zippackage elements.

- The package element is used to reference the older .pck spelling packages and is used by Authentic Browser versions previous to version 2011r3. These Authentic Browser versions ignore the zippackage element.
- The zippackage element is used to reference the .zip spelling packages and is used by Authentic Browser versions from version 2011r3 onwards. These Authentic Browser versions ignore the package element.

For more details about the spelling packages, see the section, Spellchecker Packages.

```xml
<?xml version="1.0" encoding="UTF-8"?>
<loadersettings>
```
The following should be noted:

- The location of a package must be specified as content of the `packageurl` child of the `package` or `zippackage` element. The location path can be absolute, or be relative to the HTML file that calls the LoaderSettings file. The package can be located anywhere on the server.

- Removing a package from the XML file (by removing a `package` element) causes the package to not be available for installation on the client.

- The `mode` attribute of the `package` element specifies the level of user influence over the decision to install the package. The following values may be used:
  1. `user`: Causes the user to be asked at every Authentic Browser startup whether the package should be installed.
  2. `user_demand`: Installs the package when this is specifically asked for by the user. The user specifically requests this by clicking either the toolbar button to spell check or to open the Package Management dialog.
  3. `force`: Causes the package to be installed without notifying the user.

- The content of the `description` child of `package` can be edited will be used as descriptive text in the package management dialog.

One-time installation of packages

If Authentic Browser is updated to a newer version, there is no need to reinstall a package that was previously installed on the client. The already installed package will be used by the new version. Authentic Browser on the client PC reads the LoaderSettings file on the server, retrieves
package information from this file, and checks whether the package is locally installed.

**Note:** Spelling packages supported in version 2011r3 and later (.zip packages) use a different spellchecker than the spelling packages of previous versions (.pck packages). Authentic Browser versions from version 2011r3 onwards use either the .zip spelling packages. Older versions of Authentic Browser use the .pck spelling packages.
1.12.2 Spellchecker Packages

From version 2011r3, Authentic Browser uses Hunspell dictionaries.

Installation location
On a client machine, these dictionaries are located in a Lexicons folder at the following location:

On Windows 7/8: `C:\ProgramData\Altova\SpellChecker\Lexicons`
On Windows XP: `C:\Documents and Settings\All Users\Application Data\Altova\SharedBetweenVersions\SpellChecker\Lexicons`

If any Altova product has been installed on the client machine, then a set of built-in dictionaries will have been installed in the Lexicons folder at the location listed above. All installed dictionaries are shared by the different users of the machine and the different major versions of Altova products (whether 32-bit or 64-bit).

Additional dictionaries can be downloaded from the Altova website. Hunspell dictionaries can also be downloaded from other websites, for example, from [http://wiki.services.openoffice.org/wiki/Dictionaries](http://wiki.services.openoffice.org/wiki/Dictionaries) or [http://extensions.services.openoffice.org/en/dictionaries](http://extensions.services.openoffice.org/en/dictionaries). Also note that since Hunspell dictionaries are based on Myspell dictionaries, Myspell dictionaries can also be installed in the Lexicons folder. OpenOffice zips dictionary files as .txt files. So one can change the extension to .zip and then unzip the necessary .aff and .dic files. Users must ensure that they are in conformance with the license agreement governing the use of any dictionary files they install.

Note: The selection of built-in dictionaries that ship with Altova software does not constitute any language preferences by Altova, but is largely based on the availability of dictionaries that permit redistribution with commercial software, such as the MPL, LGPL, or BSD licenses. Many other open-source dictionaries exist, but are distributed under more restrictive licenses, such as the GPL license. Many of these dictionaries are available as part of a separate installer located at [http://www.altova.com/dictionaries](http://www.altova.com/dictionaries). It is your choice as to whether you can agree to the terms of the license applicable to the dictionary and whether the dictionary is appropriate for your use with the software on your computer.

Dictionary files and dictionary folder structure on the client
Each installed dictionary on the client machine consists of two Hunspell dictionary files that work together: a .aff file and .dic file.

All language dictionaries are installed in the Lexicons folder at the location listed above. Within the Lexicons folder, different language dictionaries are each stored in a different folder: `<language name>\<dictionary files>`. These language folder names will be the dictionary names that are displayed in Authentic Browser. The structure of the Lexicons folder and the corresponding dictionary names as they would appear in Authentic Browser are as listed below.

```
Lexicons
  -- English (British)
    | -- .aff file
    | -- .dic file
```
Dictionary files on the server
A language dictionary must be saved on the server as a ZIP file. When the ZIP file is downloaded to the client and installed, a language folder is created in the Lexicons folder (see Installation Location above) and the unzipped .aff and .dic files are placed in this folder. For example, the file English (British).zip creates the folder: \Lexicons\English (British) and installs the .aff and .dic files in this folder.

Also, multiple ZIP files can be zipped in a single ZIP file and this single file can be placed on the server. When this ZIP file is downloaded to the client and installed there, the name of the innermost ZIP files are used as the names of the folders in the Lexicons folder. For example, the files English (British).zip and English (US).zip can be zipped into a file called English.zip, which is placed on the server. On installation, two folders will be created in the Lexicons folder: \Lexicons\English (British) and \Lexicons\English (US).

Dictionary installation mechanism
When an HTML page for Authentic Plug-in is opened, the dictionary packages can be installed on the client, either automatically or when the user requests it. The installation mechanism works as follows:

1. The HTML page that is opened in Authentic Browser references the LoaderSettings file.
2. The LoaderSettings file references the spelling package on the server. The LoaderSettings file also specifies, for each spelling package, whether that package should be installed automatically immediately after the HTML page is loaded or whether the user should be asked about installation.
3. The spelling package is installed from the zipped file on the server to the client.

Dictionary installation
Spellchecker packages are stored on the server as ZIP (.zip) files and can be installed locally via the Authentic Browser GUI. To install a spellchecker package, click the Package Management icon in the Authentic Browser GUI. This pops up the Package Management dialog (screenshot below). The Package Management dialog also pops up if no dictionary is installed and the Spellchecker icon is clicked.

In the Package Management dialog (screenshot below), all the packages available on the server are listed in the lower pane. The names displayed are the names of the ZIP files on the server. Select the files you wish to install and then click Install. Installed packages can be deleted by selecting them in the upper pane and clicking Delete.
If a ZIP file selected for installation contains multiple ZIP packages, then the Choose Packages dialog (screenshot below) pops up. In this dialog, you can check the packages you wish to install, or uncheck the packages you wish not to install. Click OK to install the checked packages. This mechanism enables you to store each language dictionary separately on the server or within a single ZIP file.

If the installation of a package will overwrite an existing package, a warning message is displayed. The Authentic Browser user can then either go ahead with the overwriting or cancel.
1.13 Using XMLData

XMLData gives you access to the elements of the currently displayed XML file. It enables you to perform all necessary modifications to the elements of the XML structure. The main functionality of XMLData is:

1. Access to the names and values of all kinds of elements (e.g. elements, attributes)
2. Creation of new elements of all kinds.
3. Insertion and appending of new elements.
4. Erasing of existing child elements.

If you are already familiar with the XMLData interface because you used it in the XMLSpy API, please note that special considerations must be made if new elements are created and inserted into the XML file, or existing elements are renamed. Please take a look at "Creation and Insertion of new XMLData objects" and "Name and value of elements" below.

Structure of XMLData

Before you can use the XMLData interface, you have to know how an existing XML file is mapped into a XMLData structure. One major thing you must be aware of is, that XMLData has no separate branch of objects for attributes.

The attributes of an element are also children of the element. The XMLData.Kind property, gives you the opportunity to distinguish between the different types of children of an element.

Example:

This XML code,

```xml
<ParentElement>
  <FirstChild attr1="Red" attr2="Black">
    This is the value of FirstChild
  </FirstChild>
  <SecondChild>
    <!--Your Comment-->
  </SecondChild>
  </DeepChild>
  <SecondChild>
    This is Text
  </SecondChild>
</ParentElement>
```

is mapped to the following XMLData object structure:
The parent of all XML elements inside of a file is the property `Authentic.XMLRoot`. Use this `XMLData` object to get references to all other XML elements in the structure.

**Name and value of elements**
To get and to modify the name and value of all types of XML elements use the `XMLData.Name` and `XMLData.TextValue` properties. It is possible that several kinds of `XMLData` objects and empty elements do not have an associated text value.

It is not recommended to change the name of an existing XML element in the Authentic View. The name has an important impact how the Authentic View displays the content of the element. Please refer to the StyleVision documentation for detailed information.

**Creation and insertion of new `XMLData` objects**
The creation of a new XML language entity requires the following steps:

1. Create the new `XMLData` object:
   Use the `Authentic.CreateChild` method to create a new `XMLData` object. Set name and value before you insert the new XML entity (see point 3).

2. Find the correct location for the new `XMLData` object:
   To insert a new `XMLData` object you have to get a reference to the parent first. If the new child is to become the last child of the parent, use the `XMLData.AppendChild` method to insert the `XMLData` object.
If the new child should be located elsewhere in the sequence of child objects, use the `XMLData.GetFirstChild` and `XMLData.GetNextChild` to move the iterator to the child before which the new child should be inserted.

3. Insert the new child with `XMLData.InsertChild`. The new child will be inserted immediately before the current child. In the Authentic View it can happen that together with the created element additional child nodes will be added to the XML file. This depends on the node settings you can modify using the StyleVision.

The following example adds a third child between `<FirstChild>` and the `<SecondChild>` element:

```vba
Dim objParent
Dim objChild
Dim objNewChild

Set objNewChild = objPlugIn.CreateChild(spyXMLDataElement)
objNewChild.Name = "OneAndAHalf"

'objParent is set to <ParentElement>
'GetFirstChild(-1) gets all children of the parent element 'and move to <SecondChild>
Set objChild = objParent.GetFirstChild(-1)
Set objChild = objParent.GetNextChild

objParent.InsertChild objNewChild
Set objNewChild = Nothing
```

Child elements should be inserted in a special order. Please avoid to insert attributes into the sequence after any other child elements. That means attributes must not have preceding elements of any other type and any other element must not have a succeeding element of type attribute.

Authentic View requires a special handling of displaying the text value of an XML element except for attributes. Any text (or content) must be part of an extra child node of type text. You can create such an element using `Authentic.CreateChild` with the parameter value 6. Instead of setting the text value of the element directly please set the text value of the child node.

### Copying of existing XMLData objects

If you want to insert existing XMLData objects at a different place in the same file, you cannot use the `XMLData.InsertChild` and `XMLData.AppendChild` methods. These methods only work for new XMLData objects.

Instead of using InsertChild or AppendChild, you have to copy the object hierarchy manually. The following function written in JavaScript is an example for recursively copying XMLData:

```javascript
// this function returns a complete copy of the XMLData object
function GetCopy(objXMLData)
{
    var objNew;
    objNew = objPlugIn.CreateChild(objXMLData.Kind);
```
```javascript
objNew.Name = objXMLData.Name;
objNew.TextValue = objXMLData.TextValue;

if(objXMLData.HasChildren) {
    var objChild;
    objChild = objXMLData.GetFirstChild(-1);

    while(objChild) {
        try {
            objNew.AppendChild(GetCopy(objChild));
            objChild = objXMLData.GetNextChild();
        } catch(e) {
            objChild = null;
        }
    }

    return objNew;
}
```

Erasing of XMLData objects
XMLData provides two methods for the deletion of child objects, `XMLData.EraseAllChildren` and `XMLData.EraseCurrentChild`.

To erase XMLData objects you need access to the parent of the elements you want to remove. Use `XMLData.GetFirstChild` and `XMLData.GetNextChild` to get a reference to the parent XMLData object.

See the method descriptions of `XMLData.EraseAllChildren` and `XMLData.EraseCurrentChild` for examples how to erase XML elements.
1.14 DOM and XMLData

The XMLData interface gives you full access to the XML structure of the current document with less methods than DOM and is also much simpler. The XMLData interface is a minimalist approach to reading and modifying existing, or newly created XML data. You might however, want to use a DOM tree because you can access one from an external source, or you just prefer the MSXML DOM implementation.

The `ProcessDOMNode()` and `ProcessXMLDataNode()` functions provided below convert any segments of an XML structure between XMLData and DOM.

To use the `ProcessDOMNode()` function:
- pass the root element of the DOM segment you want to convert in `objNode` and
- pass the plug-in object with the CreateChild() method in `objCreator`

To use the `ProcessXMLDataNode()` function:
- pass the root element of the XMLData segment in `objXMLData` and
- pass the DOMDocument object created with MSXML in `xmlDoc`

```javascript
function ProcessDOMNode(objNode, objCreator)
{
    var objRoot;
    objRoot = CreateXMLDataFromDOMNode(objNode, objCreator);
    if (objRoot) {
        if ((objNode.nodeValue != null) && (objNode.nodeValue.length > 0))
            objRoot.TextValue = objNode.nodeValue;
        // add attributes
        if (objNode.attributes) {
            var Attribute;
            var oNodeList = objNode.attributes;
            for (var i = 0; i < oNodeList.length; i++) {
                Attribute = oNodeList.item(i);
                var newNode;
                newNode = ProcessDOMNode(Attribute, objCreator);
                objRoot.AppendChild(newNode);
            }
        }
        if (objNode.hasChildNodes) {
            try {
                // add children
                var Item;
                oNodeList = objNode.childNodes;
            }
        }
    }
}
```
for(var i = 0; i < oNodeList.length; i++) {
  Item = oNodeList.item(i);

  var newNode;
  newNode = ProcessDOMNode(Item, objCreator);

  objRoot.appendChild(newNode);
}

} catch(err) {
}

} return objRoot;

function CreateXMLDataFromDOMNode(objNode, objCreator) {
  var bSetName = true;
  var bSetValue = true;

  var nKind = 4;

  switch(objNode.nodeType) {
    case 2: nKind = 5; break;
    case 3: nKind = 6; bSetName = false; break;
    case 4: nKind = 7; bSetName = false; break;
    case 8: nKind = 8; bSetValue = false; break;
    case 7: nKind = 9; break;
  }

  var objNew = null;
  objNew = objCreator.CreateChild(nKind);

  if(bSetName)
    objNew.Name = objNode.nodeName;

  if(bSetValue && (objNode.nodeValue != null))
    objNew.TextValue = objNode.nodeValue;

  return objNew;
}

>StatusValue = function ProcessXMLDataNode(objXMLData, xmlDoc) {
  var objRoot;
  objRoot = CreateDOMNodeFromXMLData(objXMLData, xmlDoc);

  // XMLData to DOM conversion

  function ProcessXMLDataNode(objXMLData, xmlDoc) {
    var objRoot;
    objRoot = CreateDOMNodeFromXMLData(objXMLData, xmlDoc);
if(objRoot) {
  if(IsTextNodeEnabled(objRoot) && (objXMLData.TextValue.length > 0))
    objRoot.appendChild(xmlDoc.createTextNode(objXMLData.TextValue));

  if(objXMLData.HasChildren) {
    try {
      var objChild;
      objChild = objXMLData.GetFirstChild(-1);

      while(true) {
        if(objChild) {
          var newNode;
          newNode = ProcessXMLDataNode(objChild, xmlDoc);

          if(newNode.nodeType == 2) {
            // child node is an attribute
            objRoot.attributes.setNamedItem(newNode);
          }
          else
            objRoot.appendChild(newNode);
        }
        objChild = objXMLData.GetNextChild();
      }
    }
    catch(err) {}
  }
}

return objRoot;

function CreateDOMNodeFromXMLData(objXMLData, xmlDoc) {
  switch(objXMLData.Kind) {
    case 4:return xmlDoc.createElement(objXMLData.Name);
    case 5:return xmlDoc.createAttribute(objXMLData.Name);
    case 6:return xmlDoc.createTextNode(objXMLData.TextValue);
    case 7:return xmlDoc.createCDATASection(objXMLData.TextValue);
    case 8:return xmlDoc.createComment(objXMLData.TextValue);
    case 9:return xmlDoc.createProcessingInstruction(objXMLData.Name, objXMLData.TextValue);
  }

  return xmlDoc.createElement(objXMLData.Name);
}

function IsTextNodeEnabled(objNode) {
  switch(objNode.nodeType) {
case 1:
case 2:
case 5:
case 6:
case 11: return true;
}

return false;
}
1.15 Authentic Scripting

The Authentic Scripting feature provides more flexibility and interactivity to SPS designs. These designs can be created or edited in StyleVision Enterprise and Professional editions, and can be viewed in the Authentic View of the Enterprise and Professional editions of Altova products.

A complete listing of support for this feature in Altova products is given in the table below. Note, however, that in the trusted version of Authentic Browser plug-in, internal scripting is turned off because of security concerns.

<table>
<thead>

*   No AuthenticView
** Scripted designs displayed. No internal macro execution or event handling. External events fired.

Authentic Scripts behave in the same way in all Altova products, so no product-specific code or settings are required.

How Authentic Scripting works

The designer of the SPS design can use Authentic Scripting in two ways to make Authentic documents interactive:

- By assigning scripts for user-defined actions (macros) to design elements, toolbar buttons, and context menu items.
- By adding to the design event handlers that react to Authentic View events.

All the scripting that is required for making Authentic documents interactive is done within the StyleVision GUI (Enterprise and Professional editions). Forms, macros and event handlers are created within the Scripting Editor interface of StyleVision and these scripts are saved with the SPS. Then, in the Design View of StyleVision, the saved scripts are assigned to design elements, toolbar buttons, and context menus. When an XML document based on the SPS is opened in an Altova product that supports Authentic Scripting (see table above), the document will have the additional flexibility and interactivity that has been created for it.

Documentation for Authentic Scripting

The documentation for Authentic Scripting is available in the documentation of StyleVision. It can
be viewed online via the Product Documentation page of the Altova website.
2 Objects

This section contains a listing and description of the various Authentic Browser objects.

Description
Authentic Class
2.1.1 Authentic.ApplyTextState

See also

*Declaration:* `ApplyTextState(elementName as String)`

*Description*
Applies or removes the text state defined by the parameter `elementName`. Common examples for the parameter `elementName` would be strong and italic.

In an XML document there are segments of data, which may contain sub-elements. For example consider the following HTML:

```html
<b>fragment</b>
```

The HTML tag `<b>` will cause the word fragment to be bolded. However, this only happens because the HTML parser knows that the tag `<b>` is bold. With XML there is much more flexibility. It is possible to define any XML tag to do anything you desire. The point is that it is possible to apply a Text state using XML. But the Text state that is applied must be part of the schema.

For example in the OrgChart.xml OrgChart.sps, OrgChart.xsd example the tag `<strong>` is the same as bold. And to apply bold the method `ApplyTextState()` is called. But like the row and edit operations it is necessary to test if it is possible to apply the text state.

See also `IsTextStateEnabled` and `IsTextStateApplied`. 
2.1.2 **Authentic.attachCallBack**

**Deprecated**

Use connection point events instead as described [here](#).

---

See also

**Declaration:** `attachCallBack(bstrName as String, varCallBack as Variant)`

**Description**

The Authentic View provides events which can be handled using custom callback functions. All event handlers take no parameters and any returned value will be ignored. To retrieve information when a specific event is raised you have to read the according properties of the event object.

List of currently available events:

- ondragover
- ondrop
- onkeydown
- onkeyup
- onkeypress
- onmousemove
- onmouseup
- onmousedown
- oneditpaste
- oneditecut
- oneditecopy

Since version 3.0.0.0:

- ondoceditcommand

Since version: 5.3.0.0:

- onbuttondoubleclick

**JavaScript example:**

```javascript
// somewhere in your script:
objPlugIn.attachCallBack("ondragover", OnDragOver);
objPlugIn.attachCallBack("ondrop", OnDrop);

// event handlers
function OnDragOver()
{
    if (!objPlugIn.event.dataTransfer.ownDrag &&
        objPlugIn.event.dataTransfer.type == "TEXT")
    {
        objPlugIn.event.dataTransfer.dropEffect = 1;
    }
```
objPlugIn.event.cancelBubble = true;
}
}

// OnDrop() replaces the complete text value of the XML
// element with the selection from the drag operation
function OnDrop()
{
    var objTransfer = objPlugIn.event.dataTransfer;

    if (!objTransfer.ownDrag &&
        (objTransfer.type == "TEXT")
    )
        objPlugIn.event.srcElement.TextValue = objTransfer.getData();
}
2.1.3 **AuthenticView**

See also

*Declaration:* `AuthenticView as AuthenticView` (read-only)

**Description**

Returns an object that gives access to properties and methods specific to the Authentic view.

`AuthenticView` overlaps with the existing view specific functionality. Future versions of AuthenticView will include all view-specific functionality. The AuthenticView object is the recommended interface for all future implementations.

**Examples**

Please see the [Bubble sort of dynamic tables](#) for information on how to use the AuthenticView object.
2.1.4 **Authentic.AutoHideUnusedCommandGroups**

*Declaration:* `AutoHideUnusedCommandGroups` as `Boolean`

*Description*
- True if unused Toolbar - CommandGroups are hidden automatically (e.g. XML - table commands, if the current SPS file does not support XML tables)
- Default value: true
2.1.5 **Authentic.BaseURL**

*Declaration: BaseURL as String*

*Description*
This property sets the base URL to resolve relative paths. If no URL is set, the location of the current XML file is used.
2.1.6 Authentic.ClearSelection

Declaration: ClearSelection()

Description
The method clears the current selection. Any following attempt to get the selection using the CurrentSelection property, fails until the user selects a node or a successful call to SelectionSet() has been processed.

Before a node that has the current selection can be deleted, the selection must be set to a different node or cleared.
2.1.7 **Authentic.ClearUndoRedo**

*Declaration:* `ClearUndoRedo()`

*Description*
The method clears the whole Undo/Redo buffer.
2.1.8 **Authentic.ControlInitialized**

See also

*Declaration:* `ControlInitialized`

*Description*
This event is raised when the control is created and initialized.

See also [Connection point events](#).
2.1.9 Authentic.CreateChild

See also

Declaration: CreateChild(nKind as SPYXMLDataKind) as XMLData

Return Value
New XML node

Description

The CreateChild method is used to create new nodes which you can insert into the XML structure of the current document using the XMLData interface.

See also XMLData.AppendChild and XMLData.InsertChild
2.1.10 Authentic.CurrentSelection

See also

Declaration: CurrentSelection as AuthenticSelection

Description
The property provides access to the current selection in the Authentic View.

The example code below retrieves the complete text of the current selection:

JavaScript:

```javascript
// somewhere in your script:
GetSelection(objPlugIn.CurrentSelection);

// GetSelection() collects complete text selection
function GetSelection(objSel)
{
    var strText = "";
    var objCurrent = objSel.Start;

    while(!objSel.End.IsSameNode(objCurrent))
    {
        objCurrent = objPlugIn.GetNextVisible(objCurrent);
        strText += objCurrent.TextValue;
    }

    strText += objSel.End.TextValue.substring(0,objSel.EndTextPosition);
    return objSel.Start.TextValue.substr(objSel.StartTextPosition) + strText;
}
```
2.1.11 **Authentic.DesignDataLoadObject**

See also

*Declaration:* DesignDataLoadObject as AuthenticLoadObject

*Description*

The DesignDataLoadObject contains a reference to the SPS document. The SPS document is used to generate the WYSIWYG editing environment and is typically generated by StyleVision.

See also [SchemaLoadObject](#) for an example.
2.1.12 **Authentic.EditClear**

See also

*Declaration:* EditClear

*Description*
Clears the current selection.
2.1.13  **Authentic.EditCopy**

See also

*Declaration*: EditCopy

*Description*
Copies the current selection to the clipboard.
2.1.14 **Authentic.EditCut**

See also

*Declaration:* EditCut

*Description*
Cuts the current selection from the document and copies it to the clipboard.
2.1.15 Authentic.EditPaste

See also

**Declaration:** EditPaste

**Description**

Pastes the content from the clipboard into the document.
2.1.16 **Authentic/EditRedo**

See also

*Declaration:* **EditRedo**

*Description*
Redo the last undo step.
2.1.17  **Authentic.EditSelectAll**

See also

*Declaration:* `EditSelectAll`

*Description*
The method selects the complete document.
2.1.18 Authentic>EditUndo

See also

Declaration: EditUndo

Description
Undo the last action.
2.1.19 **Authentic.EnableModifications**

*Declaration:* `EnableModifications` as `Boolean`

**Description**
True if Authentic Browser modifications to the XML content are enabled. See also the `Modified` property.

Default value: TRUE
2.1.20  **Authentic.EntryHelperAlignment**

*Declaration:* EntryHelperAlignment as **SPYAuthenticToolbarAlignment**

*Description*
This property can be used to set the position of the entry helpers. The default value is 3, which places the entry helpers on the right side.
2.1.21 **Authentic.EntryHelpersEnabled**

*Declaration:* EntryHelpersEnabled as Boolean

*Description*
True if Authentic Browser entry helpers are enabled.
This property can be used to enable or disable the entry helpers.

Default value: FALSE
2.1.22 **Authentic.EntryHelperSize**

*Declaration:* EntryHelperSize as Integer

*Description*
This property can be used to set the initial size of the entry helpers area in pixels. Set the property to -1 if this value should be ignored.

Default value: -1
### 2.1.23 Authentic.EntryHelperWindows

**Declaration:** EntryHelperWindows as SPYAuthenticEntryHelperWindows

**Description**  
This property can be used to define which of the entry helpers should be displayed. The values can be combined to display more than one entry helper window. The default value is 7 to show all three entry helpers.
2.1.24 **Authentic.event**

See also

*Declaration:* `event` as `AuthenticEvent`

*Description*

The event property holds an event data object which contains informations about the current event.
2.1.25  Authentic.FindDialog

See also

Declaration: FindDialog

Description
Displays the FindDialog.

See also Find and replace.
2.1.26 Authentic.FindNext

See also

Declaration: FindNext

Description
The method performs a find next operation.

See also Find and replace.
### 2.1.27 Authentic.GetAllAttributes

**See also**

**Declaration:** `GetAllAttributes(pForElement as XMLData, pElements as Variant)`

**Description**

GetAllAttributes() returns the allowed attributes for the specified element as an array of strings.

**JavaScript example:**

```javascript
function GetAttributes()
{
    var arrElements = new Array(1);

    var objStart = objPlugIn.CurrentSelection.Start;
    var strText;
    strText = "Valid attributes at current selection:\n\n";

    for(var i = 1; i <= 4; i++)
    {
        objPlugIn.GetAllAttributes(objStart, arrElements);
        strText = strText + ListArray(arrElements) + "------------------\n";
    }

    return strText;
}

function ListArray(arrIn)
{
    var strText = "";

    if(typeof(arrIn) == "object")
    {
        for(var i = 0; i <= (arrIn.length - 1); i++)
            strText = strText + arrIn[i] + "\n";
    }

    return strText;
}
```

**VBScript example:**

```vbnet
Sub DisplayAllowedAttributes
    dim arrElements()

    dim objStart
    dim objEnd
    set objStart = objPlugIn.CurrentSelection.Start
    set objEnd = objPlugIn.CurrentSelection.End

    dim strText
```
strText = "Valid attributes at current selection:" & chr(13) & chr(13)

dim i

For i = 1 To 4
    objView.GetAllAttributes objStart, arrElements
    strText = strText & ListArray(arrElements) & "----------------" & chr(13)
Next

msgbox strText
End Sub

Function ListArray(arrIn)
    dim strText

    If IsArray(arrIn) Then
        dim i

        For i = 0 To UBound(arrIn)
            strText = strText & arrIn(i) & chr(13)
        Next
    End If

    ListArray = strText
End Function
2.1.28 Authentic.GetAllowedElements

See also

**Declaration:** GetAllowedElements(nAction as SPYAuthenticElementActions, pStartElement as XMLData, pEndElement as XMLData, pElements as Variant)

**Description**
GetAllowedElements() returns the allowed elements for the various actions specified by nAction.

JavaScript example:

```javascript
function GetAllowed()
{
    var arrElements = new Array(1);

    var objStart = objPlugIn.CurrentSelection.Start;
    var objEnd = objPlugIn.CurrentSelection.End;

    var strText;
    strText = "valid elements at current selection:

    for(var i = 0; i <= 4; i++) {
        objPlugIn.GetAllowedElements(i, objStart, objEnd, arrElements);
        strText = strText + ListArray(arrElements) + "------------------
    }

    return strText;
}

function ListArray(arrIn)
{
    var strText = ""

    if(typeof(arrIn) == "object"){
        for(var i = 0; i <= (arrIn.length - 1); i++)
            strText = strText + arrIn[i] + "\n"
    }

    return strText;
}

VBScript example:

Sub DisplayAllowed
    dim arrElements()

    dim objStart
    dim objEnd
    set objStart = objPlugIn.CurrentSelection.Start
    set objEnd = objPlugIn.CurrentSelection.End
```
dim strText
strText = "Valid elements at current selection:" & chr(13) & chr(13)

dim i

For i = 1 To 4
    objView.GetAllowedElements i, objStart, objEnd, arrElements
    strText = strText & ListArray(arrElements) & "---------------" & chr(13)
Next

msgbox strText
End Sub

Function ListArray(arrIn)
    dim strText

    If IsArray(arrIn) Then
        dim i

        For i = 0 To UBound(arrIn)
            strText = strText & arrIn(i) & chr(13)
        Next
    End If

    ListArray = strText
End Function
2.1.29  **Authentic.GetFileVersion**

See also

*Declaration:*  `GetFileVersion(strVersion as String)`

*Description*

The method simply returns the version of the component as a string in the format 5.0.0.0.
2.1.30  **Authentic.GetNextVisible**

See also

*Declaration:*  `GetNextVisible(pElement as XMLData) as XMLData`

*Description*
The method gets the next visible XML element in the document.
2.1.31 **Authentic.GetPreviousVisible**

See also

*Declaration:* GetPreviousVisible(*pElement* as XMLData) as XMLData

*Description*
The method gets the previous visible XML element in the document.
2.1.32 Authentic.IsEditClearEnabled

See also

Declaration: IsEditClearEnabled as Boolean

Description
True if EditClear is possible.

See also Editing operations.
2.1.33 **Authentic.IsEditCopyEnabled**

See also

*Declaration:* `IsEditCopyEnabled` as `Boolean`

*Description*
True if copy to clipboard is possible.

See also `EditCopy` and `Editing operations`.
2.1.34 Authentic.IsEditCutEnabled

See also

*Declaration:* IsEditCutEnabled as Boolean

*Description*
True if EditCut is currently possible.

See also Editing operations.
2.1.35 Authentic.IsEditPasteEnabled

See also

*Declaration:* IsEditPasteEnabled as Boolean

*Description*

True if EditPaste is possible.

See also Editing operations.
2.1.36 Authentic.IsEditRedoEnabled

See also

Declaration: IsEditRedoEnabled as Boolean

Description
True if EditRedo is currently possible.

See also Editing operations.
2.1.37 **Authentic.IsEditUndoEnabled**

See also

*Declaration:* `IsEditUndoEnabled` as `Boolean`

*Description*
True if `EditUndo` is possible.

See also *Editing operations.*
2.1.38 **Authentic.IsFindNextEnabled**

See also

*Declaration:* `IsFindNextEnabled` as `Boolean`

*Description*
True if FindNext is currently possible. False if no more occurrences are left.

See also [Find and replace](#) and [FindDialog](#).
2.1.39 **Authentic.IsRowAppendEnabled**

See also

*Declaration:* `IsRowAppendEnabled` as `Boolean`

*Description*

True if `RowAppend` is possible.

See also `Row operations`. 
2.1.40 Authentic.IsRowDeleteEnabled

See also

*Declaration:* IsRowDeleteEnabled as Boolean

*Description*
True if RowDelete is possible.

See also Row operations.
2.1.41  Authentic.IsRowDuplicateEnabled

See also

*Declaration*: IsRowDuplicateEnabled as Boolean

*Description*
True if RowDuplicate is currently possible.

See also Row operations.
2.1.42 Authentic.IsRowInsertEnabled

See also

*Declaration:* IsRowInsertEnabled as Boolean

*Description*

True if RowInsert is possible.

See also Row operations.
2.1.43 Authentic.IsRowMoveDownEnabled

See also

Declaration: IsRowMoveDownEnabled as Boolean

Description
True if RowMoveDown is currently possible.

See also Row operations.
2.1.44 **Authentic.IsRowMoveUpEnabled**

See also

*Declaration:* `IsRowMoveUpEnabled` as `Boolean`

*Description*

True if `RowMoveUp` is possible.

See also `Row operations`. 
2.1.45  **Authentic.IsTextStateApplied**

See also

*Declaration:*  `IsTextStateApplied(elementName as String) as Boolean`

*Description*
Checks to see if the text state has already been applied. Common examples for the parameter `elementName` would be strong and italic.
2.1.46 Authentic.IsTextStateEnabled

See also

Declaration: IsTextStateEnabled(elementName as String) as Boolean

Description
Checks to see if it is possible to apply a text state. Common examples for the parameter elementName would be strong and italic.
2.1.47 Authentic.LoadXML

See also

*Declaration:* `LoadXML(xmlString as String)`

*Description*
Loads the current XML document with the XML string applied. The new content is displayed immediately.
2.1.48 **Authentic.MarkUpView**

See also

*Declaration:* `MarkUpView(kind as SPYAuthenticMarkupVisibility)`

*Description*
By default the document displayed is using HTML techniques. But sometimes it is desirable to show the editing tags. Using this method it is possible to display different types of markup tags.
2.1.49 **Authentic.Modified**

*Declaration:* Modified as Boolean

*Description*
True if XML content is modified.

This property is read-only.
2.1.50  **Authentic.Print**

See also

*Declaration:* Print

*Description*
Print the current document being edited.
2.1.51 Authentic.PrintPreview

See also

*Declaration:* PrintPreview

*Description*
Print preview the document being edited.
2.1.52  **Authentic.RedrawEntryHelpers**

*Declaration:*  `RedrawEntryHelpers()`

**Description**

RedrawEntryHelpers takes the values from the `EntryHelpersEnabled`, `EntryHelperAlignment`, `EntryHelperSize` and `EntryHelperWindows` properties and redraws the entry helper windows.
2.1.53 **Authentic.ReloadToolbars**

*Declaration:* ReloadToolbars()

*Description*
ReloadToolbars reads the ToolbarRows collection and redraws the toolbars and the view.
2.1.54  **Authentic.ReplaceDialog**

See also

*Declaration*: ReplaceDialog

*Description*

Displays the ReplaceDialog.

See also [Find and replace](#).
2.1.55 **Authentic.Reset**

<table>
<thead>
<tr>
<th>Deprecated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use <a href="#">Authentic.StartEditing</a> instead.</td>
</tr>
</tbody>
</table>

See also

*Declaration:* Reset

**Description**
Reset the data being edited. Typically called before editing a new set of XML, XSL and SPS documents.

The method does not change the view and it's still possible to continue working with the currently displayed document.
2.1.56  Authentic.RowAppend

See also

Declaration:  RowAppend

Description
Appends a row at the current position.

See also  Row operations.
2.1.57  **Authentic.RowDelete**

See also

*Declaration*: RowDelete

*Description*
Deletes the currently selected row(s).

See also *Row operations*. 
2.1.58  Authentic.RowDuplicate

See also

Declaration: RowDuplicate

Description
The method duplicates the currently selected rows.

See also Row operations.
2.1.59 **Authentic.RowInsert**

See also

*Declaration:* RowInsert

*Description*
Inserts a new row immediately above the current selection.

See also Row operations.
2.1.60 **Authentic.RowMoveDown**

See also

*Declaration*: RowMoveDown

*Description*
Moves the current row one position down.

See also [Row operations](#).
2.1.61 **Authentic.RowMoveUp**

See also

*Declaration:* RowMoveUp

*Description*
Moves the current row one position up.

See also [Row operations](#).
2.1.62 Authentic.Save

See also

*Declaration:* Save

**Description**
Saves the document to the URL specified by the property `XMLDataSaveUrl`. For the Untrusted versions, you can also use a full local path.

The plug-in sends an HTTP PUT request to the server to save the currently displayed XML file.
2.1.63 **Authentic.SaveButtonAutoEnable**

*Declaration:* `SaveButtonAutoEnable` as `Boolean`

*Description*
If this property is set to TRUE, the enabled/disabled state of the Save button in the Toolbar of the control is set according to the `Modified` flag of the document.

Default value is FALSE.
2.1.64 Authentic.SavePOST

See also

Declaration: SavePOST

Description
Saves the document to the URL specified by the property XMLDataSaveUrl. For the Untrusted versions, you can also use a full local path. The plug-in sends an HTTP POST request to the server to save the currently displayed XML file.

Checking whether file was saved or not
If the Authentic plug-in receives an HTTP response of \( \geq 300 \) it will assume the file has not been saved and will (by default) pop-up first a message box containing the HTTP error response, then a second (suppressible) message box advising the user that the file has not been saved. It is up to the application developer to ensure that the correct HTTP response is returned according to the success or failure of the save attempt. An example of PHP code to achieve this might look like this:

```php
<?php
    // suppress error messages to prevent any output
    // being generated before headers can be sent
    error_reporting (0);
    $error = false;
    $handle = fopen ( "result.xml", "w+" );
    if (! $handle)
        $error = true;
    else
    {
        if (! fwrite($handle, $HTTP_RAW_POST_DATA))
            $error = true;
        else
            fclose($handle);
    }
    if ($error)
        header( "HTTP/1.1 500 Server Error" );
?>
```
2.1.65 Authentic.SaveXML

See also

Declaration: SaveXML as String

Return Value
XML structure as string

Description
Saves the current XML data to a string that is returned to the caller.
2.1.66 **Authentic.SchemaLoadObject**

See also

*Declaration:* SchemaLoadObject as AuthenticLoadObject

**Description**

**Example**

```plaintext
objPlugIn.SchemaLoadObject.URL = "http://www.YOURSERVER.com/OrgChart.xsd"
objPlugIn.XMLDataLoadObject.URL = "http://www.YOURSERVER.com/OrgChart.xml"
objPlugIn.DesignDataLoadObject.URL = "http://www.YOURSERVER.com/OrgChart.sps"
objPlugIn.StartEditing
```

The code above sets all URL properties of the load objects and calls StartEditing to load and display the files. For the Untrusted versions, you can also use a full local path. The current content and status of the plug-in will be cleared.
2.1.67 Authentic.SelectionChanged

See also

Declaration: SelectionChanged as VT_0019

Description
This event is raised whenever the user changes the current selection.

See also Connection point events.
2.1.68 Authentic.SelectionMoveTabOrder

See also

Declaration: SelectionMoveTabOrder(bForward as Boolean, bTag as Boolean)

Description
SelectionMoveTabOrder() moves the current selection forwards or backwards.

If bTag is false and the current selection is at the last cell of a table a new line will be added.
2.1.69 **Authentic.SelectionSet**

See also

*Declaration:* `SelectionSet(pStartElement as XMLData, nStartPos as long, pEndElement as XMLData, nEndPos as long) as Boolean`

*Description*

Use `SelectionSet()` to set a new selection in the Authentic View. It's possible to set `pEndElement` to null (nothing) if the selection should be just over one (`pStartElement`) XML element.
2.1.70  **Authentic.SetUnmodified**

*Declaration:* `SetUnmodified()`

**Description**

After calling this method, the current condition of the Undo/Redo buffer is taken as the clean state of the underlying XML document and the `Modified` flag is set to FALSE.
2.1.71 Authentic.StartEditing

See also

Declaration: StartEditing as Boolean

Return Value
True if all files were successfully loaded and displayed.

Description
Start editing the current document. It is important to set the properties of the load objects SchemaLoadObject, DesignDataLoadObject and XMLDataLoadObject first.
2.1.72 **Authentic.StartSpellChecking**

*Declaration:* StartSpellChecking()

**Description**
This command opens the spell check dialog if a package containing the spell check engine and the required lexicons is available and activated.
2.1.73 **Authentic.TextStateBmpURL**

*Declaration:* `TextStateBmpURL` as `String`

**Description**
The URL from which the bitmaps for the text-state icons should be retrieved. If no URL is specified, no text-state buttons are displayed.

**Examples**

```plaintext
objPlugIn.TextStateBmpURL = "<http://plugin.xmlspy.com/textstates/>

<PARAM NAME="TextStateBmpURL" VALUE="http://plugin.xmlspy.com/textstates/">
```
2.1.74  Authentic.TextStateToolbarLine

Declaration: TextStateToolbarLine as long

Description
The toolbar (line number) in which the text-state icons should be placed. Text-state icons can be appended to existing toolbars or placed in new toolbars.
Default value: 1
2.1.75 Authentic.ToolbarRows

Declaration: ToolbarRows as AuthenticToolbarRows

Description
Gets a collection of all toolbars to be displayed. See description of AuthenticToolbarRows, how toolbars can be deleted, added or modified.
2.1.76  **Authentic.ToolbarsEnabled**  

*Declaration:* ToolbarsEnabled as Boolean  

*Description*  
True if Authentic Browser Toolbars are enabled.  
This property can be used to enable or disable all toolbars.  
Default value: true
2.1.77  **Authentic.ToolbarTooltipsEnabled**

*Declaration:* ToolbarTooltipsEnabled as Boolean

*Description*
True if the Tooltips for the Authentic Browser Toolbars are enabled.
Default value: true
2.1.78 **Authentic.UICommands**

*Declaration:* `UICommands as AuthenticCommands`

**Description**

Gets a collection of all available toolbar commands (with description).

For these commands, buttons can be placed on different toolbars.

Read only.

**Example**

Get all available commands, command-groups, descriptions, and show them in a message box

```vba
dim str
for each UICommand in objPlugin.UICommands
    str = str & UICommand.CommandID & " | " & UICommand.Group & " | " & UICommand.ShortDescription & chr(13)
next
msgbox str
```
2.1.79 **Authentic.ValidateDocument**

See also

*Declaration:* `ValidateDocument(showResults as Boolean) as Boolean`

**Return Value**
result of validation

**Description**
Validates the current XML data for correctness as per the XML schema data. If the parameter `showResults` is FALSE then the validation errors will be suppressed, otherwise validation errors are shown.
2.1.80  Authentic.validationBadData

See also

Declaration: validationBadData as XMLData

Description
This property can provide additional information about the last validation error. It gets set after a call to ValidateDocument() and is either null or holds a reference to the XML element which causes the error.
2.1.81 **Authentic.validationMessage**

See also

*Declaration:* `validationMessage` as `String`

*Description*

If the validation failed (after a call to `ValidateDocument`) this property stores a string with the error message.
2.1.82  **Authentic.XMLDataLoadObject**

See also

*Declaration:*  **XMLDataLoadObject** as  **AuthenticLoadObject**

**Description**
The XMLDataLoadObject contains an reference to the XML document being edited. The XML document is typically defined using XMLSpy, but generated using a database or another business process.

See also  **SchemaLoadObject** for an example.
2.1.83 **Authentic.XMLDataSaveUrl**

See also

*Declaration:* `XMLDataSaveUrl` as `String`

*Description*
When the XML data has been modified it is possible to save the data back to a server using an URL. When saving the XML data via an **HTTP PUT** using the `Authentic.Save` method, this property defines the location where the XML data will be saved. When posting the data via an **HTTP POST** using the `Authentic.SavePOST` method, this property defines the location of a server-side script/application which will process the POST data. For the Untrusted versions, you can also use a full local path.

See also the `Authentic.Save` and the `Authentic.SavePOST` methods.
2.1.84 Authentic.XMLRoot

See also

Declaration: XMLRoot as XMLData

Description
XMLRoot is the parent element of the currently displayed XML structure. Using the XMLData interface you have full access to the complete content of the file.

See also Using XMLData for more informations.
2.1.85  **Authentic.XMLTable**

*Declaration:* XMLTable as AuthenticXMLTableCommands

*Description*
Get a set of all XML table commands.
Read only.
2.2  AuthenticCommand

Methods

Properties

(CommandID
Group
ShortDescription
Name)
2.2.1  **AuthenticCommand.CommandID**

*Declaration:* CommandID as SPYAuthenticCommand

*Description*
Get the CommandId of the command
Possible values: see AuthenticToolbarButton
Read only

*Example*
See Example at Authentic.UICommands
2.2.2 AuthenticCommand.Group

*Declaration:* Group as SPYAuthenticCommandGroup

*Description*
The CommandGroup to which the command belongs to.
Read only

*Example*
See Example at Authentic.UICommands
2.2.3 AuthenticCommand.ShortDescription

Declaration: ShortDescription as String

Description
Short description of the command (e.g. the tooltip text)
Read only

Example
See Example at Authentic.UICommands
2.2.4 AuthenticCommand.Name

Declaration: Name as String

Description
for future use
2.3 AuthenticCommands

Methods
Item

Properties
Count
2.3.1 AuthenticCommands.Count

*Declaration:* Count as long

*Description*
Number of available UI commands.
Read only
2.3.2 AuthenticCommands.Item

Declaration: Item (nPosition as long) as AuthenticCommand

Description
Get command of position nPosition. nPosition starts with 1.
2.4 AuthenticContextMenu

The context menu interface provides the mean for the user to customize the context menus shown in Authentic. The interface has the methods listed in this section.
2.4.1 **CountItems**

*Method:* `CountItems()`

**Return Value**
Returns number of menu items.

**Errors**
- 2501  Invalid object.
2.4.2  DeleteItem

Method: DeleteItem(position as integer)

Return Value
Deletes an existing menu item.

Errors

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2501</td>
<td>Invalid object</td>
</tr>
<tr>
<td>2502</td>
<td>Invalid index</td>
</tr>
</tbody>
</table>
2.4.3 GetItemText

*Method:* GetItemText (position as integer) menu item name as string

*Return Value*
Gets the menu item's name.

*Errors*
- 2501 Invalid object
- 2502 Invalid index
2.4.4 **InsertItem**

*Method: InsertItem*(position as integer, menu item name as string, macro name as string)*

**Return Value**
Inserts a user-defined menu item. The menu item will start a macro, so a valid macro name must be submitted.

**Errors**
- 2501 Invalid object
- 2502 Invalid index
- 2503 No such macro
- 2504 Internal error
2.4.5 SetItemText

Method: SetItemText (position as integer, menu item name as string)

Return Value
Sets the menu item's name.

Errors
- 2501 Invalid object
- 2502 Invalid index
2.5 **AuthenticDataTransfer**

See also

**Methods**
- `getData`

**Properties**
- `dropEffect`
- `ownDrag`
- `type`

**Description**
AuthenticDataTransfer interface.
2.5.1 **AuthenticDataTransfer.dropEffect**

See also

*Declaration:* `dropEffect` as `long`

*Description*

The property stores the drop effect from the default event handler. You can set the drop effect if you change this value and set `AuthenticEvent.cancelBubble` to TRUE.
2.5.2  AuthenticDataTransfer.getData

See also

Declaration: getData as Variant

Description
getData gets the actual data associated with this dataTransfer object. See also
AuthenticDataTransfer.type for more informations.
2.5.3 **AuthenticDataTransfer.ownDrag**

See also

*Declaration:* ownDrag as Boolean

*Description*

The property is TRUE if the current dragging source comes from inside of the Authentic View.
2.5.4 **AuthenticDataTransfer.type**

See also

*Declaration:* `type` as `String`

*Description*
Holds the type of the data you get with the `AuthenticDataTransfer.getData` method.

Currently supported data types are:

- **OWN**
  data from plug-in itself
- **TEXT**
  plain text
- **UNICODETEXT**
  plain text as UNICODE
- **IUNKNOWN**
  IUnknown reference to IDataObject instance
2.6 AuthenticEvent

See also

Properties
- altKey
- altLeft
- ctrlKey
- ctrlLeft
- shiftKey
- shiftLeft
- keyCode
- repeat
- button
- clientX
- clientY
- dataTransfer
- srcElement
- fromElement
- propertyName
- cancelBubble
- returnValue
- type

Description
AuthenticEvent interface.
2.6.1 **AuthenticEvent.altKey**

See also

*Declaration:* `altKey` as `Boolean`

*Description*

True if the right ALT key is pressed.
2.6.2 AuthenticEvent.altLeft

See also

Declaration: altLeft as Boolean

Description
True if the left ALT key is pressed.
2.6.3 **AuthenticEvent.button**

See also

*Declaration:* `button` as `long`

**Description**

Specifies which mouse button is pressed:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No button is pressed.</td>
</tr>
<tr>
<td>1</td>
<td>Left button is pressed.</td>
</tr>
<tr>
<td>2</td>
<td>Right button is pressed.</td>
</tr>
<tr>
<td>3</td>
<td>Left and right buttons are both pressed.</td>
</tr>
<tr>
<td>4</td>
<td>Middle button is pressed.</td>
</tr>
<tr>
<td>5</td>
<td>Left and middle buttons both are pressed.</td>
</tr>
<tr>
<td>6</td>
<td>Right and middle buttons are both pressed.</td>
</tr>
<tr>
<td>7</td>
<td>All three buttons are pressed.</td>
</tr>
</tbody>
</table>

The `onbuttondown` and `onbuttonup` events set the button value in different ways. The `onbuttonup` event just sets the value for the button which has been released and raised the up event regardless which buttons are also pressed at the moment.
2.6.4 **AuthenticEvent.cancelBubble**

See also

*Declaration:* `cancelBubble` as `Boolean`

*Description*
Set `cancelBubble` to `TRUE` if the default event handler should not be called.
2.6.5  **AuthenticEvent.clientX**

See also

*Declaration:* `clientX` as `long`

*Description*

X value of the current mouse position in client coordinates.
2.6.6 \textbf{AuthenticEvent.clientY}

See also

\textit{Declaration}: \texttt{clientY} as \texttt{long}

\textbf{Description}

Y value of the current mouse position in client coordinates.
2.6.7 **AuthenticEvent.ctrlKey**

See also

*Declaration:* `ctrlKey` as `Boolean`

*Description*

True if the right CTRL key is pressed.
2.6.8  AuthenticEvent.ctrlLeft

See also

*Declaration:* `ctrlLeft` as `Boolean`

*Description*
True if the left CTRL key is pressed.
2.6.9  AuthenticEvent.dataTransfer

See also

Declaration: dataTransfer as Variant

Description
property dataTransfer
2.6.10 AuthenticEvent.fromElement

See also

*Declaration:* `fromElement` as `Variant`

*Description*
Currently no event sets this property.
2.6.11 **AuthenticEvent.keyCode**

See also

*Declaration:* `keyCode` as `long`

*Description*

Keycode of the currently pressed key.

This property is read-write.
2.6.12  AuthenticEvent.propertyName

See also

Declaration: propertyName as String

Description
Currently no event sets this property.
2.6.13 AuthenticEvent.repeat

See also

*Declaration:* repeat as Boolean

*Description*
True if the onkeydown event is repeated.
2.6.14  **AuthenticEvent.returnValue**

See also

*Declaration:* `returnValue` as `Variant`

*Description*
Use `returnValue` to set a return value for your event handler.
2.6.15 AuthenticEvent.shiftKey

See also

Declaration: shiftKey as Boolean

Description
True if the right SHIFT key is pressed.
2.6.16  **AuthenticEvent.shiftLeft**

See also

*Declaration:* `shiftLeft` as `Boolean`

*Description*
True if the left SHIFT key is pressed.
2.6.17 **AuthenticEvent.srcElement**

See also

*Declaration:* `srcElement` as `Variant`

**Description**
Element which fires the current event.
This is usually an `XMLData` object.

Since version 3.0.0.0:

The property can also hold a reference to an `AuthenticCommand` object if was set from an `ondoceditcommand` event.
2.6.18  **AuthenticEvent.type**

See also

*Declaration:* type as String

*Description*
Currently no event sets this property.
2.7 AuthenticEventContext

The EventContext interface gives access to many properties of the context in which a macro is executed.
2.7.1 **EvaluateXPath**

*Method:* `EvaluateXPath(string expression) as string`

**Return Value**
The method evaluates the XPath expression in the context of the node within which the event was triggered and returns a string.

**Description**
`EvaluateXPath()` executes an XPath expressions with the given event context. The result is returned as string, in the case of a sequence it is a space-separated string.

**Errors**
- 2201 Invalid object.
- 2202 No context.
- 2209 Invalid parameter.
- 2210 Internal error.
- 2211 XPath error.
2.7.2 GetEventContextType

**Method:** GetEventContextType () as EventContextType enumeration

**Return Value**
Returns the context node type.

**Description**
GetEventContextType allows the user to determine whether the macro is in an XML node or in an XPath atomic item context. The enumeration AuthenticEventContextType is defined as follows:

authenticEventContextXML,
authenticEventContextAtomicItem,
authenticEventContextOther

If the context is a normal XML node, the GetXMLNode() function gives access to it (returns NULL if not).

**Errors**
- 2201 Invalid object.
- 2202 No context.
- 2209 Invalid parameter.
2.7.3  **GetNormalizedTextValue**

*Method:* `GetNormalizedTextValue()` value as `string`

**Return Value**
Returns the value of the current node as `string`

**Errors**
- 2201  Invalid object.
- 2202  No context.
- 2203  Invalid context
- 2209  Invalid parameter.
2.7.4 GetVariableValue

Method: GetVariableValue(name as string, value as string)

Return Value
Gets the value of the named variable.

Description
GetVariableValue gets the variable's value in the scope of the context.

nZoom = parseInt( AuthenticView.EventContext.GetVariableValue( 'Zoom' ) );
if ( nZoom > 1 )
{
    AuthenticView.EventContext.SetVariableValue( 'Zoom', nZoom - 1 );
}

Errors
- 2201 Invalid object.
- 2202 No context.
- 2204 No such variable in scope
- 2205 Variable cannot be evaluated
- 2206 Variable returns sequence
- 2209 Invalid parameter
2.7.5  GetXMLNode

Method: GetXMLNode () XMLData object

Return Value
Returns the context XML node or NULL

Errors
2201  Invalid object.
2202  No context.
2203  Invalid context
2209  Invalid parameter.
2.7.6 **IsAvailable**

*Method:* `IsAvailable()`

**Return Value**
Returns true if `EventContext` is set.

**Errors**
- 2201 Invalid object.
2.7.7 **SetVariableValue**

*Method:* `SetVariableValue` *(name as string, value as string)*

**Return Value**
Sets the value of the named variable.

**Description**

`SetVariableValue` sets the variable's value in the scope of the context.

```javascript
nZoom = parseInt( AuthenticView.EventContext.GetVariableValue( 'Zoom' ) );
if ( nZoom > 1 )
{
    AuthenticView.EventContext.SetVariableValue( 'Zoom', nZoom - 1 );
}
```

**Errors**

- **2201** Invalid object.
- **2202** No context.
- **2204** No such variable in scope
- **2205** Variable cannot be evaluated
- **2206** Variable returns sequence
- **2207** Variable read-only
- **2208** No modification allowed
2.8 **AuthenticLoadObject**

See also

**Properties**
- **String**
- **URL**

**Description**
The XMLSpyXMLLoadSave object is used to set the source for the files you need to load. You can either set the content directly via the String property or as an external location via the URL property.

See also [Authentic.SchemaLoadObject](#), [Authentic.DesignDataLoadObject](#) and [Authentic.XMLDataLoadObject](#) for more informations about how to use them.
2.8.1 **AuthenticLoadObject.String**

See also

*Declaration:* String as String

*Description*
You can use this property to set the XML structure from a string. The URL property of the object must be empty if you want to use this property.
2.8.2  AuthenticLoadObject.URL

See also

*Declaration:* URL as String

*Description*
The property should contain a valid URL for the load or save operation. Currently supported HTTP protocols are http, https, ftp and gopher.
2.9 **AuthenticRange**

See also

The first table lists the properties and methods of AuthenticRange that can be used to navigate through the document and select specific portions.

<table>
<thead>
<tr>
<th>Properties</th>
<th>Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application</td>
<td>MoveBegin</td>
</tr>
<tr>
<td>FirstTextPosition</td>
<td>MoveEnd</td>
</tr>
<tr>
<td>FirstXMLData</td>

<tr>
<td>GetEntityNames</td>
</tr>
<tr>
<td>InsertEntity</td>
</tr>
</tbody>
</table>

**Description**

AuthenticRange objects are the 'cursor' selections of the automation interface. You can use them to point to any cursor position in the Authentic view, or select a portion of the document. The operations available for AuthenticRange objects then work on this selection in the same way, as the corresponding operations of the user interface do with the current user interface selection. The main difference is that you can use an arbitrary number of AuthenticRange objects at the same time, whereas there is exactly one cursor selection in the user interface.

To get to an initial range object use **AuthenticView.Selection**, to obtain a range corresponding with the current cursor selection in the user interface. Alternatively, some trivial ranges are accessible
via the read-only properties AuthenticView.DocumentBegin, AuthenticView.DocumentEnd, and AuthenticView.WholeDocument. The most flexible method is AuthenticView.Goto, which allows navigation to a specific portion of the document within one call. For more complex selections, combine the above, with the various navigation methods on range objects listed in the first table on this page.

Another method to select a portion of the document is to use the position properties of the range object. Two positioning systems are available and can be combined arbitrarily:

- **Absolute** text cursor positions, starting with position 0 at the document beginning, can be set and retrieved for the beginning and end of a range. For more information see FirstTextPosition and LastTextPosition. This method requires complex internal calculations and should be used with care.

- The XMLData element and a text position inside this element, can be set and retrieved for the beginning and end of a range. For more information see FirstXMLData, FirstXMLDataOffset, LastXMLData, and LastXMLDataOffset. This method is very efficient but requires knowledge on the underlying document structure. It can be used to locate XMLData objects and perform operations on them otherwise not accessible through the user interface.

Modifications to the document content can be achieved by various methods:

- The Text property allows you to retrieve the document text selected by the range object. If set, the selected document text gets replaced with the new text.
- The standard document edit functions Cut, Copy, Paste and Delete.
- Table operations for tables that can grow dynamically.
- Methods that map the functionality of the Authentic entry helper windows.
- Access to the XMLData objects of the underlying document to modify them directly.
2.9.1 **AuthenticRange.AppendRow**

See also

*Method:* `AppendRow () as Boolean`

**Description**

If the beginning of the range is inside a dynamic table, this method inserts a new row at the end of the selected table. The selection of the range is modified to point to the beginning of the new row. The function returns *true* if the append operation was successful, otherwise *false*.

**Errors**

- **2001** The authentic range object or its related view object is no longer valid.
- **2005** Invalid address for the return parameter was specified.

**Examples**

```vbscript
' ---------------------------------------------------------
' VBScript
' Append row at end of current dynamically growable table
' ---------------------------------------------------------
Dim objRange
Set objRange = objPlugin.ActiveDocument.AuthenticView.Selection

' check if we can insert something
If objRange.IsInDynamicTable Then
    objRange.AppendRow
    ' objRange points to beginning of new row
    objRange.Select
End If
```
2.9.2 **AuthenticRange.Application**

See also

*Property*: Application as **Authentic** (read-only)

**Description**
Access the application object.

**Errors**
- 2001: The authentic range object or its related view object is no longer valid.
- 2005: Invalid address for the return parameter was specified.
2.9.3 **AuthenticRange.CanPerformAction**

See also

*Method*: `CanPerformAction (eAction as SPYAuthenticActions, strElementName as String) as Boolean`

*Description*

`CanPerformAction` and its related methods enable access to the entry-helper functions of Authentic. This function allows easy and consistent modification of the document content, without having to know exactly where the modification will take place. The beginning of the range object is used to locate the next valid location where the specified action can be performed. If the location can be found, the method returns `True`, otherwise it returns `False`.

**HINT:** To find out all valid element names for a given action, use `CanPerformActionWith`.

*Errors*

- 2001 The authentic range object or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
- 2007 Invalid action was specified.

*Examples*

See `PerformAction`.
2.9.4 AuthenticRange.CanPerformActionWith

See also

Method: CanPerformActionWith (eAction as SPYAuthenticActions, out_arrElementNames as Variant)

Description

CanPerformActionWith and its related methods, enable access to the entry-helper functions of Authentic. These function allows easy and consistent modification of the document content without having to know exactly where the modification will take place.

This method returns an array of those element names that the specified action can be performed with.

HINT: To apply the action use PerformAction.

Errors

2001 The authentic range object, or its related view object is no longer valid.
2005 Invalid address for the return parameter was specified.
2007 Invalid action was specified.

Examples

See PerformAction.
2.9.5 **AuthenticRange.Clone**

See also

*Method:* Clone () as AuthenticRange

*Description*
Returs a copy of the range object.

*Errors*
- **2001** The authentic range object, or its related view object is no longer valid.
- **2005** Invalid address for the return parameter was specified.
2.9.6 **AuthenticRange.CollapsToBegin**

See also

**Method:** `CollapsToBegin()` as **AuthenticRange**

**Description**
Sets the end of the range object to its begin. The method returns the modified range object.

**Errors**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>The authentic range object, or its related view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.9.7 AuthenticRange.CollapsToEnd

See also

Method: CollapsToEnd () as AuthenticRange

Description
Sets the beginning of the range object to its end. The method returns the modified range object.

Errors
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.9.8 **AuthenticRange.Copy**

See also

*Method:* Copy () as Boolean

*Description*
Returns *False* if the range contains no portions of the document that may be copied. Returns *True* if text, and in case of fully selected XML elements the elements as well, has been copied to the copy/paste buffer.

*Errors*

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>The authentic range object or its related view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.9.9 AuthenticRange.Cut

See also

*Method:* Cut () as Boolean

*Description*
Returns *False* if the range contains portions of the document that may not be deleted. Returns *True* after text, and in case of fully selected XML elements the elements as well, has been deleted from the document and saved in the copy/paste buffer.

*Errors*
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.9.10 AuthenticRange.Delete

See also

Method: Delete () as Boolean

Description
Returns False if the range contains portions of the document that may not be deleted. Returns True after text, and in case of fully selected XML elements the elements as well, has been deleted from the document.

Errors

2001 The authentic range object or its related view object is no longer valid.
2005 Invalid address for the return parameter was specified.
2.9.11 **AuthenticRange.DeleteRow**

See also

*Method: DeleteRow* () as *Boolean*

**Description**

If the beginning of the range is inside a dynamic table, this method deletes the selected row. The selection of the range gets modified to point to the next element after the deleted row. The function returns *true*, if the delete operation was successful, otherwise *false*.

**Errors**

- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.

**Examples**

```vbscript
' ---------------------------------------------------------
'                      VBScript
' Delete selected row from dynamically growing table
' ---------------------------------------------------------
Dim objRange
Set objRange = objPlugin.ActiveDocument.AuthenticView.Selection

' check if we are in a table
If objRange.IsInDynamicTable Then
    objRange.DeleteRow
End If
```
2.9.12  AuthenticRange.DuplicateRow

See also

*Method:* DuplicateRow () as Boolean

*Description*
If the beginning of the range is inside a dynamic table, this method inserts a duplicate of the current row after the selected one. The selection of the range gets modified to point to the beginning of the new row. The function returns *true* if the duplicate operation was successful, otherwise *false*.

*Errors*
- 2001  The authentic range object, or its related view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.

*Examples*
```
' ---------------------------------------------------------
'                       VBScript
' dupplicate row in current dynamically growable table
' ---------------------------------------------------------
Dim objRange
Set objRange = objPlugin.ActiveDocument.AuthenticView.Selection

' check if we can insert soemthing
If objRange.IsInDynamicTable Then
  objRange.DuplicateRow
  ' objRange points to begining of new row
  objRange.Select
End If
```
2.9.13 **AuthenticRange.EvaluateXPath**

*Method:* `EvaluateXPath` (string expression) as string

**Return Value**
The method returns a string

**Description**
`EvaluateXPath()` executes an XPath expressions with the context node being the beginning of the range selection. The result returned as string, in the case of a sequence it is a space-separated string. If XML context node is irrelevant, the user may provide any node, like `AuthenticView.XMLDataRoot`.

**Errors**
- 2001 Invalid object
- 2005 Invalid parameter
- 2008 Internal error
- 2202 Missing context node
- 2211 XPath error
2.9.14 **AuthenticRange.ExpandTo**

See also

**Method:** ExpandTo \((e\text{Kind} \text{as SPYAuthenticElementKind})\) \text{as AuthenticRange}

**Description**
Selects the whole element of type \(e\text{Kind}\), that starts at, or contains, the first cursor position of the range. The method returns the modified range object.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2003 Range expansion would be beyond end of document.
- 2005 Invalid address for the return parameter was specified.
2.9.15 AuthenticRange.FirstTextPosition

See also

*Property:* FirstTextPosition as Long

**Description**
Set or get the left-most text position index of the range object. This index is always less or equal to LastTextPosition. Indexing starts with 0 at document beginning, and increments with every different position that the text cursor can occupy. Incrementing the test position by 1, has the same effect as the cursor-right key. Decrementing the test position by 1 has the same effect as the cursor-left key.

If you set FirstTextPosition to a value greater than the current LastTextPosition, LastTextPosition gets set to the new FirstTextPosition.

**HINT:** Use text cursor positions with care, since this is a costly operation compared to XMLData based cursor positioning.

**Errors**
- 2001 The authentic range object, or its related view object is not valid.
- 2005 Invalid address for the return parameter was specified.
- 2006 A text position outside the document was specified.

**Examples**

```
' ---------------------------------------
'               VBScript
' ---------------------------------------
Dim objAuthenticView
' we assume that the active document is open in authentic view mode
Set objAuthenticView = objPlugin.AuthenticView
nDocEndPosition = objAuthenticView.DocumentEnd.FirstTextPosition

' let's create a range that selects the whole document
' in an inefficient way
Dim objRange
' we need to get a (any) range object first
Set objRange = objAuthenticView.DocumentBegin
objRange.FirstTextPosition = nDocStartPosition
objRange.LastTextPosition = nDocEndPosition

' let's check if we got it right
If objRange isEqual(objAuthenticView.WholeDocument) Then
    MsgBox "Test using direct text cursor positioning was ok"
Else
    MsgBox "Ooops!"
End If
```
2.9.16 AuthenticRange.FirstXMLData

See also

*Property:* FirstXMLData as XMLData

**Description**
Set or get the first XMLData element in the underlying document that is partially, or completely selected by the range. The exact beginning of the selection is defined by the FirstXMLDataOffset attribute.

Whenever you set FirstXMLData to a new data object, FirstXMLDataOffset gets set to the first cursor position inside this element. Only XMLData objects that have a cursor position may be used. If you set FirstXMLData / FirstXMLDataOffset selects a position greater then the current LastXMLData / LastXMLDataOffset, the latter gets moved to the new start position.

HINT: You can use the FirstXMLData and LastXMLData properties, to directly access and manipulate the underlying XML document in those cases where the methods available with the AuthenticRange object are not sufficient.

**Errors**
- **2001** The authentic range object, or its related view object is not valid.
- **2005** Invalid address for the return parameter was specified.
- **2008** Internal error
- **2009** The XMLData object cannot be accessed.

**Examples**
```vbnet
' -----------------------------------------------
'                 VBScript
' show name of currently selected XMLData element
' -----------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

Dim objXMLData
Set objXMLData = objAuthenticView.Selection.FirstXMLData
' authentic view adds a 'text' child element to elements
' of the document which have content. So we have to go one
' element up.
Set objXMLData = objXMLData.Parent
MsgBox "Current selection selects element " & objXMLData.Name
```
### AuthenticRange.FirstXMLDataOffset

**Property:** FirstXMLDataOffset as Long

**Description**
Set or get the cursor position offset inside FirstXMLData element for the beginning of the range. Offset positions are based on the characters returned by the Text property, and start with 0. When setting a new offset, use -1 to set the offset to the last possible position in the element.

The following cases require specific attention:

- The textual form of entries in ComboBoxes, CheckBoxes and similar controls can be different from what you see on screen. Although the data offset is based on this text, there only two valid offset positions, one at the beginning and one at the end of the entry. An attempt to set the offset to somewhere in the middle of the entry, will result in the offset being set to the end.

- The textual form of XML Entities might differ in length from their representation on the screen. The offset is based on this textual form.

If FirstXMLData / FirstXMLDataOffset selects a position after the current LastXMLData / LastXMLDataOffset, the latter gets moved to the new start position.

**Errors**
- 2001 The authentic range object, or its related view object is not valid.
- 2005 Invalid offset was specified.

**Examples**

```
' ---------------------------------------------
'                VBScript
' Select the complete text of an XMLData element
' using XMLData based selection and ExpandTo
' ---------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

' first we use the XMLData based range properties
' to select all text of the first XMLData element
' in the current selection
Dim objRange
Set objRange = objAuthenticView.Selection
objRange.FirstXMLDataOffset = 0   ' start at beginning of element text
objRange.LastXMLData = objRange.FirstXMLData   ' select only one element
objRange.LastXMLDataOffset = -1   ' select till its end

' the same can be achieved with the ExpandTo method
Dim objRange2
Set objRange2 = objAuthenticView.Selection.ExpandTo(spyAuthenticTag)

' were we successful?
If objRange.IsEqual(objRange2) Then
    objRange.Select()
Else
    MsgBox "Ooops"
```

End If
2.9.18 AuthenticRange.GetElementAttributeNames

See also

**Method:** GetElementAttributeNames (strElementName as String, out_arrAttributeNames as Variant)

**Description**
Retrieve the names of all attributes for the enclosing element with the specified name. Use the element / attribute pairs, to set or get the attribute value with the methods GetElementAttributeValue and SetElementAttributeValue.

**Errors**
- **2001** The authentic range object, or its related view object is no longer valid.
- **2005** Invalid element name was specified. Invalid address for the return parameter was specified.

**Examples**
See SetElementAttributeValue.
2.9.19 **AuthenticRange.GetElementAttributeValue**

See also

*Method:* `GetElementAttributeValue (strElementName as String, strAttributeName as String) as String`

**Description**
Retrieve the value of the attribute specified in `strAttributeName`, for the element identified with `strElementName`. If the attribute is supported but has no value assigned, the empty string is returned. To find out the names of attributes supported by an element, use `GetElementAttributeNames`, or `HasElementAttribute`.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid element name was specified.
  Invalid attribute name was specified.
  Invalid address for the return parameter was specified.

**Examples**
See `SetElementAttributeValue`. 
2.9.20 AuthenticRange.GetElementHierarchy

See also

Method: GetElementHierarchy (out_arrElementNames as Variant)

Description
Retrieve the names of all XML elements that are parents of the current selection. Inner elements
get listed before enclosing elements. An empty list is returned whenever the current selection is
not inside a single XMLData element.

The names of the element hierarchy, together with the range object uniquely identify XMLData
elements in the document. The attributes of these elements can be directly accessed by
GetElementAttributeNames, and related methods.

Errors
2001 The authentic range object, or its related view object is no longer valid.
2005 Invalid address for the return parameter was specified.

Examples
See SetElementAttributeValue.
2.9.21 **AuthenticRange.GetEntityNames**

See also

**Method:** `GetEntityNames ( out_arrEntityNames as Variant)`

**Description**
Retrieve the names of all defined entities. The list of retrieved entities is independent of the current selection, or location. Use one of these names with the `InsertEntity` function.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.

**Examples**
See `InsertEntity`.
2.9.22  AuthenticRange.GetVariableValue

*Method:* GetVariableValue(name as string, value as string)

**Return Value**
Gets the value of the named variable.

**Errors**
- 2001 Invalid object.
- 2005 Invalid parameter
- 2202 No context.
- 2204 No such variable in scope
- 2205 Variable cannot be evaluated
- 2206 Variable returns sequence
2.9.23 **AuthenticRange.Goto**

See also

*Method:* `Goto (eKind as SPYAuthenticElementKind, nCount as Long, eFrom as SPYAuthenticDocumentPosition) as AuthenticRange`

**Description**
Sets the range to point to the beginning of the `nCount` element of type `eKind`. The start position is defined by the parameter `eFrom`.

Use positive values for `nCount` to navigate to the document end. Use negative values to navigate to the beginning of the document. The method returns the modified range object.

**Errors**
- **2001** The authentic range object, or its related view object is no longer valid.
- **2003** Target lies after end of document.
- **2004** Target lies before begin of document.
- **2005** Invalid element kind specified.
  - Invalid start position specified.
  - Invalid address for the return parameter was specified.
2.9.24 **AuthenticRange.GotoNext**

See also

**Method:** `GotoNext (eKind as SPYAuthenticElementKind) as AuthenticRange`

**Description**
Sets the range to the beginning of the next element of type `eKind`. The method returns the modified range object.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2003 Target lies after end of document.
- 2005 Invalid element kind specified.
  Invalid address for the return parameter was specified.

**Examples**
```vbnet
' --------------------------------------------
'                VBScript
' Scan through the whole document word-by-word
' --------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

Dim objRange
Set objRange = objAuthenticView.DocumentBegin
Dim bEndOfDocument
bEndOfDocument = False

On Error Resume Next
While Not bEndOfDocument
    objRange.GotoNext(spyAuthenticWord).Select
    If ((Err.number - vbObjecterror) = 2003) Then
        bEndOfDocument = True
        Err.Clear
    ElseIf (Err.number <> 0) Then
        Err.Raise ' forward error
    End If
Wend
```
2.9.25  **AuthenticRange.GotoNextCursorPosition**

See also

**Method:**  
*GotoNextCursorPosition()* as **AuthenticRange**

**Description**
Sets the range to the next cursor position after its current end position. Returns the modified object.

**Errors**

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>The authentic range object, or its related view object is no longer valid.</td>
</tr>
<tr>
<td>2003</td>
<td>Target lies after end of document.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.9.26 **AuthenticRange.GotoPrevious**

See also

**Method:** GotoPrevious (eKind as SPYAuthenticElementKind) as AuthenticRange

**Description**
Sets the range to the beginning of the element of type eKind which is before the beginning of the current range. The method returns the modified range object.

**Errors**

- **2001** The authentic range object, or its related view object is no longer valid.
- **2004** Target lies before beginning of document.
- **2005** Invalid element kind specified.
  - Invalid address for the return parameter was specified.

**Examples**

```vbscript
' --------------------------------------------
'                  VBScript
' Scan through the whole document tag-by-tag
' --------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

Dim objRange
Set objRange = objAuthenticView.DocumentEnd
Dim bEndOfDocument
bBeginOfDocument = False

On Error Resume Next
While Not bBeginOfDocument
    objRange.GotoPrevious(spyAuthenticTag).Select
    If ((Err.number - vbObjecterror) = 2004) Then
        bBeginOfDocument = True
        Err.Clear
    ElseIf (Err.number <> 0) Then
        Err.Raise ' forward error
    End If
Wend
```
2.9.27 **AuthenticRange.GotoPreviousCursorPosition**

See also

*Method:* `GotoPreviousCursorPosition()` as `AuthenticRange`

**Description**
Set the range to the cursor position immediately before the current position. Returns the modified object.

**Errors**
- 2001: The authentic range object, or its related view object is no longer valid.
- 2004: Target lies before begin of document.
- 2005: Invalid address for the return parameter was specified.
2.9.28  AuthenticRange.HasElementAttribute

See also

*Method:* HasElementAttribute (*strElementName* as String, *strAttributeName* as String) as Boolean

*Description*
Tests if the enclosing element with name *strElementName*, supports the attribute specified in *strAttributeName*.

*Errors*

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>The authentic range object, or its related view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid element name was specified.</td>
</tr>
<tr>
<td></td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.9.29  **AuthenticRange.InsertEntity**

See also

**Method:** `InsertEntity (strEntityName as String)`

**Description**

Replace the ranges selection with the specified entity. The specified entity must be one of the entity names returned by `GetEntityNames`.

**Errors**

- **2001**  The authentic range object, or its related view object is no longer valid.
- **2005**  Unknown entry name was specified.

**Examples**

```vbnet
' ---------------------------------------------------------
'                         VBScript
' Insert the first entity in the list of available entities
' ---------------------------------------------------------
Dim objRange
Set objRange = objPlugin.AuthenticView.Selection

' first we get the names of all available entities as they
' are shown in the entry helper of XMLSpy
Dim arrEntities
objRange.GetEntityNames arrEntities

' we insert the first one of the list
If UBound(arrEntities) >= 0 Then
    objRange.InsertEntity arrEntities(0)
    objRange.Select()
Else
    MsgBox "Sorry, no entities are available for this document"
End If
```
2.9.30  **AuthenticRange.InsertRow**

See also

**Method:** `InsertRow ()` as `Boolean`

**Description**
If the beginning of the range is inside a dynamic table, this method inserts a new row before the current one. The selection of the range, gets modified to point to the beginning of the newly inserted row. The function returns `true` if the insert operation was successful, otherwise `false`.

**Errors**

- **2001** The authentic range object, or its related view object is no longer valid.
- **2005** Invalid address for the return parameter was specified.

**Examples**
```
' -------------------------------------------------------------
'                      VBScript
' Insert row at beginning of current dynamically growing table
' -------------------------------------------------------------
Dim objRange
Set objRange = objPlugin.AuthenticView.Selection

' check if we can insert something
If objRange.IsInDynamicTable Then
    objRange.InsertRow
    ' objRange points to beginning of new row
    objRange.Select
End If
```
2.9.31 **AuthenticRange.IsCopyEnabled**

See also

*Property:* `IsCopyEnabled` as Boolean (read-only)

**Description**
Checks if the copy operation is supported for this range.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.9.32 AuthenticRange.IsCutEnabled

See also

**Property:** IsCutEnabled as Boolean (read-only)

**Description**
Checks if the cut operation is supported for this range.

**Errors**
- **2001** The authentic range object, or its related view object is no longer valid.
- **2005** Invalid address for the return parameter was specified.
2.9.33 **AuthenticRange.IsDeleteEnabled**

See also

*Property:* `IsDeleteEnabled` as Boolean (read-only)

**Description**
Checks if the delete operation is supported for this range.

**Errors**
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.9.34  AuthenticRange.IsEmpty

See also

Method: IsEmpty () as Boolean

Description
Tests if the first and last position of the range are equal.

Errors
- 2001  The authentic range object, or its related view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.9.35 AuthenticRange.AreEqual

See also

**Method**: `isEqual (objCmpRange as AuthenticRange) as Boolean`

**Description**
Tests if the start and end of both ranges are the same.

**Errors**

- **2001** One of the two range objects being compared, is invalid.
- **2005** Invalid address for a return parameter was specified.
2.9.36 **AuthenticRange.IsFirstRow**

See also

*Property*: `IsFirstRow()` as Boolean (read-only)

**Description**
Test if the range is in the first row of a table. Which table is taken into consideration depends on the extend of the range. If the selection exceeds a single row of a table, the check is if this table is the first element in an embedding table. See the entry helpers of the user manual for more information.

**Errors**

- 2001  The authentic range object, or its related view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.9.37 AuthenticRange.IsInDynamicTable

See also

Method: IsInDynamicTable () as Boolean

Description
Test if the beginning of the range is inside a table that supports the different row operations.

Errors
- 2001: The authentic range object, or its related view object is no longer valid.
- 2005: Invalid address for the return parameter was specified.
2.9.38 AuthenticRange.IsLastRow

See also

Property: IsLastRow() as Boolean (read-only)

Description
Test if the range is in the last row of a table. Which table is taken into consideration depends on the extend of the range. If the selection exceeds a single row of a table, the check is if this table is the last element in an embedding table. See the entry helpers of the user manual for more information.

Errors
- 2001 The authentic range object, or its related view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.9.39  **AuthenticRange.IsPasteEnabled**

*See also*

*Property:*  \texttt{IsPasteEnabled} as Boolean (read-only)

**Description**
Checks if the paste operation is supported for this range.

**Errors**
- 2001  The authentic range object, or its related view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.9.40  AuthenticRange.IsSelected

Property: IsSelected as Boolean

Description
Returns true() if selection is present. The selection range still can be empty: that happens when e.g. only the cursor is set.
2.9.41 AuthenticRange.IsTextStateApplied

See also

Method: IsTextStateApplied (i_strElementName as String) as Boolean

Description
Checks if all the selected text is embedded into an XML Element with name i_strElementName. Common examples for the parameter i_strElementName are "strong", "bold" or "italic".

Errors
2001  The authentic range object, or its related view object is no longer valid.
2005  Invalid address for the return parameter was specified.
2.9.42 AuthenticRange.LastTextPosition

See also

**Property:** LastTextPosition as Long

**Description**
Set or get the rightmost text position index of the range object. This index is always greater or equal to FirstTextPosition. Indexing starts with 0 at the document beginning, and increments with every different position that the text cursor can occupy. Incrementing the test position by 1, has the same effect as the cursor-right key. Decrementing the test position by 1 has the same effect as the cursor-left key.

If you set LastTextPosition to a value less than the current FirstTextPosition, FirstTextPosition gets set to the new LastTextPosition.

HINT: Use text cursor positions with care, since this is a costly operation compared to XMLData based cursor positioning.

**Errors**
- 2001 The authentic range object, or its related view object is not valid.
- 2005 Invalid address for the return parameter was specified.
- 2006 A text position outside the document was specified.

**Examples**
```
' ---------------------------------------
'                VBScript
' ---------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

nDocEndPosition = objAuthenticView.DocumentEnd.FirstTextPosition

' let's create a range that selects the whole document
' in an inefficient way
Dim objRange
' we need to get a (any) range object first
Set objRange = objAuthenticView.DocumentBegin
objRange.FirstTextPosition = nDocStartPosition
objRange.LastTextPosition = nDocEndPosition

' let's check if we got it right
If objRange.isEqual(objAuthenticView.WholeDocument) Then
    MsgBox "Test using direct text cursor positioning was ok"
Else
    MsgBox "Ooops!"
End If
```
2.9.43 AuthenticRange.LastXMLData

See also

Property: LastXMLData as XMLData

Description
Set or get the last XMLData element in the underlying document that is partially or completely selected by the range. The exact end of the selection is defined by the LastXMLDataOffset attribute.

Whenever you set LastXMLData to a new data object, LastXMLDataOffset gets set to the last cursor position inside this element. Only XMLData objects that have a cursor position may be used. If you set LastXMLData / LastXMLDataOffset, select a position less then the current FirstXMLData / FirstXMLDataOffset, the latter gets moved to the new end position.

HINT: You can use the FirstXMLData and LastXMLData properties to directly access and manipulate the underlying XML document in those cases, where the methods available with the AuthenticRange object are not sufficient.

Errors

<table>

</tbody>
</table>
2.9.44 **AuthenticRange.LastXMLDataOffset**

See also

*Property:* LastXMLDataOffset as Long

**Description**

Set or get the cursor position inside LastXMLData element for the end of the range.

Offset positions are based on the characters returned by the Text property and start with 0. When setting a new offset, use -1 to set the offset to the last possible position in the element. The following cases require specific attention:

- The textual form of entries in ComboBoxes, CheckBoxes and similar controls can be different from what you see on the screen. Although, the data offset is based on this text, there only two valid offset positions, one at the beginning and one at the end of the entry. An attempt to set the offset to somewhere in the middle of the entry, will result in the offset being set to the end.
- The textual form of XML Entities might differ in length from their representation on the screen. The offset is based on this textual form.

If LastXMLData / LastXMLDataOffset selects a position before FirstXMLData / FirstXMLDataOffset, the latter gets moved to the new end position.

**Errors**

- **2001** The authentic range object, or its related view object is not valid.
- **2005** Invalid offset was specified.
- Invalid address for the return parameter was specified.

**Examples**

```vbscript
' ---------------------------------------------
'                  VBScript
' Select the complete text of an XMLData element
' using XMLData based selection and ExpandTo
' ---------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

' first we use the XMLData based range properties
' to select all text of the first XMLData element
' in the current selection
Dim objRange
Set objRange = objAuthenticView.Selection
objRange.FirstXMLDataOffset = 0  ' start at beginning of element text
objRange.LastXMLData = objRange.FirstXMLData  ' select only one element
objRange.LastXMLDataOffset = -1  ' select till its end

' the same can be achieved with the ExpandTo method
Dim objRange2
Set objRange2 = objAuthenticView.Selection.ExpandTo(spyAuthenticTag)

' were we successful?
If objRange.IsEqual(objRange2) Then
  objRange.Select()
Else
```

© 2018 Altova GmbH
MsgBox "Ooops"
End If
2.9.45  AuthenticRange.MoveBegin

See also

Method: MoveBegin (eKind as SPYAuthenticElementKind, nCount as Long) as AuthenticRange

Description
Move the beginning of the range to the beginning of the nCount element of type eKind. Counting starts at the current beginning of the range object.

Use positive numbers for nCount to move towards the document end, use negative numbers to move towards document beginning. The end of the range stays unmoved, unless the new beginning would be larger than it. In this case, the end is moved to the new beginning. The method returns the modified range object.

Errors
- 2001  The authentic range object, or its related view object is no longer valid.
- 2003  Target lies after end of document.
- 2004  Target lies before beginning of document.
- 2005  Invalid element kind specified.
- 2005  Invalid address for the return parameter was specified.
2.9.46 AuthenticRange.MoveEnd

See also

*Method:* MoveEnd *(eKind as SPYAuthenticElementKind, nCount as Long) as AuthenticRange*

*Description*
Move the end of the range to the begin of the *nCount* element of type *eKind*. Counting starts at the current end of the range object.

Use positive numbers for *nCount* to move towards the document end, use negative numbers to move towards document beginning. The beginning of the range stays unmoved, unless the new end would be less than it. In this case, the beginning gets moved to the new end. The method returns the modified range object.

*Errors*

- **2001** The authentic range object, or its related view object is no longer valid.
- **2003** Target lies after end of document.
- **2004** Target lies before begin of document.
- **2005** Invalid element kind specified.
  - Invalid address for the return parameter was specified.
2.9.47 **AuthenticRange.MoveRowDown**

See also

*Method:* `MoveRowDown () as Boolean`

**Description**

If the beginning of the range is inside a dynamic table and selects a row which is not the last row in this table, this method swaps this row with the row immediately below. The selection of the range moves with the row, but does not otherwise change. The function returns `true` if the move operation was successful, otherwise `false`.

**Errors**

- **2001** The authentic range object or its related view object is no longer valid.
- **2005** Invalid address for the return parameter was specified.
2.9.48  AuthenticRange.MoveRowUp

See also

Method: MoveRowUp () as Boolean

Description
If the beginning of the range is inside a dynamic table and selects a row which is not the first row in this table, this method swaps this row with the row above. The selection of the range moves with the row, but does not change otherwise. The function returns true if the move operation was successful, otherwise false.

Errors
2001  The authentic range object, or its related view object is no longer valid.
2005  Invalid address for the return parameter was specified.

Examples
See JScript - Bubble Sort Dynamic Tables.
2.9.49  **AuthenticRange.Parent**

See also

*Property:* Parent as **AuthenticView** (read-only)

**Description**
Access the view that owns this range object.

**Errors**

- **2001**  The authentic range object, or its related view object is no longer valid.
- **2005**  Invalid address for the return parameter was specified.
2.9.50  AuthenticRange.Paste

See also

*Method:* Paste () as Boolean

*Description*
Returns *False* if the copy/paste buffer is empty, or its content cannot replace the current selection.

Otherwise, deletes the current selection, inserts the content of the copy/paste buffer, and returns *True*.

*Errors*
- 2001  The authentic range object, or its related view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.9.51 AuthenticRange.PerformAction

See also

Method: PerformAction (eAction as SPYAuthenticActions, strElementName as String) as Boolean

Description
PerformAction and its related methods, give access to the entry-helper functions of Authentic. This function allows easy and consistent modification of the document content without a need to know exactly where the modification will take place. The beginning of the range object is used to locate the next valid location where the specified action can be performed. If no such location can be found, the method returns False. Otherwise, the document gets modified and the range points to the beginning of the modification.

HINT: To find out element names that can be passed as the second parameter use CanPerformActionWith.

Errors
2001 The authentic range object, or its related view object is no longer valid.
2005 Invalid address for the return parameter was specified.
2007 Invalid action was specified.

Examples
' --------------------------------------------
'             VBScript
' Insert the innermost element
' --------------------------------------------
Dim objRange
Set objRange = objPlugin.AuthenticView.Selection

' we determine the elements that can be inserted at the current position
Dim arrElements()
objRange.CanPerformActionWith spyAuthenticInsertBefore, arrElements

' we insert the first (innermost) element
If UBound(arrElements) >= 0 Then
    objRange.PerformAction spyAuthenticInsertBefore, arrElements(0)
    ' objRange now points to the beginning of the inserted element
    ' we set a default value and position at its end
    objRange.Text = "Hello"
    objRange.ExpandTo(spyAuthenticTag).CollapsToEnd().Select
Else
    MsgBox "Can't insert any elements at current position"
End If
2.9.52 **AuthenticRange.Select**

See also

*Method: Select ()*

**Description**
Makes this range the current user interface selection. You can achieve the same result using:

'`objRange.Parent.Selection = objRange`'

**Errors**

2001  The authentic range object or its related view object is no longer valid.

**Examples**

\`
\`
\`
\`

' set current selection to end of document
objPlugin.objAuthenticView.DocumentEnd.Select()
2.9.53 **AuthenticRange.SelectNext**

See also

*Method*: `SelectNext (eKind as SPYAuthenticElementKind) as AuthenticRange`

*Description*

Selects the element of type `eKind` after the current end of the range. The method returns the modified range object.

*Errors*

- **2001**: The authentic range object, or its related view object is no longer valid.
- **2003**: Target lies after end of document.
- **2005**: Invalid element kind specified.

Invalid address for the return parameter was specified.

*Examples*

```vbs
' --------------------------------------------
'                  VBScript
' Scan through the whole document word-by-word
' --------------------------------------------
Dim objAuthenticateView
Set objAuthenticateView = objPlugin.AuthenticView

Dim objRange
Set objRange = objAuthenticateView.DocumentBegin
Dim bEndOfDocument
bEndOfDocument = False

On Error Resume Next
While Not bEndOfDocument
    objRange.SelectNext(spyAuthenticWord).Select
    If ((Err.number - vbObjectError) = 2003) Then
        bEndOfDocument = True
        Err.Clear
    ElseIf (Err.number <> 0) Then
        Err.Raise ' forward error
    End If
Wend
```
Method: GotoPrevious (eKind as SPYAuthenticElementKind) as AuthenticRange

Description
Selects the element of type eKind before the current beginning of the range. The method returns the modified range object.

Errors
- 2001 The authentic range object, or its related view object is no longer valid.
- 2004 Target lies before begin of document.
- 2005 Invalid element kind specified.
- Invalid address for the return parameter was specified.

Examples

```vbscript
' --------------------------------------------
'                VBScript
' Scan through the whole document tag-by-tag
' --------------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView
Dim objRange
Set objRange = objAuthenticView.DocumentEnd
Dim bEndOfDocument
bBeginOfDocument = False
On Error Resume Next
While Not bBeginOfDocument
    objRange.SelectPrevious(spyAuthenticTag).Select
    If ((Err.number - vbObjectError) = 2004) Then
        bBeginOfDocument = True
        Err.Clear
    ElseIf (Err.number <> 0) Then
        Err.Raise ' forward error
    End If
Wend
```
2.9.55 **AuthenticRange.SetElementAttributeValue**

See also

**Method:** SetElementAttributeValue (strElementName as String, strAttributeName as String, strAttributeValue as String)

**Description**

Retrieve the value of the attribute specified in strAttributeName for the element identified with strElementName. If the attribute is supported but has no value assigned, the empty string is returned. To find out the names of attributes supported by an element, use GetElementAttributeNames, or HasElementAttribute.

**Errors**

- 2001 The authentic range object or its related view object is no longer valid.
- 2005 Invalid element name was specified.
- 2006 Invalid attribute name was specified.
- 2007 Invalid attribute value was specified.

**Examples**

```
' first we find out all the elements below the beginning of the range
Dim arrElements
objRange.GetElementHierarchy arrElements
If IsArray(arrElements) Then
    If UBound(arrElements) >= 0 Then
        ' we use the top level element and find out its valid attributes
        Dim arrAttrs()
        objRange.GetElementAttributeNames arrElements(0), arrAttrs
        If UBound(arrAttrs) >= 0 Then
            ' we retrieve the current value of the first valid attribute
            Dim strAttrVal = objRange.GetElementAttributeValue
            (arrElements(0), arrAttrs(0))
            msgbox "current value of " & arrElements(0) & "//" & arrAttrs(0) & " is: " & strAttrVal
        End If
        ' we change this value and read it again
        strAttrVal = "Hello"
        objRange.SetElementAttributeValue arrElements(0),
        strAttrVal = objRange.GetElementAttributeValue
        (arrElements(0), arrAttrs(0))
        msgbox "new value of " & arrElements(0) & "//" & arrAttrs(0) & " is: " & strAttrVal
    End If
```
End If
End If
2.9.56 AuthenticRange.SetFromRange

See also

*Method:* SetFromRange (*objSrcRange* as *AuthenticRange*)

*Description*
Sets the range object to the same beginning and end positions as *objSrcRange*.

*Errors*
- 2001 One of the two range objects, is invalid.
- 2005 Null object was specified as source object.
2.9.57  **AuthenticRange.SetVariableValue**

Enter topic text  *Method: SetVariableValue*(name as string, value as string)

**Return Value**
Sets the value of the named variable.

**Errors**

<table>

</tr>
</tbody>
</table>
2.9.58 **AuthenticRange.Text**

See also

*Property:* **Text** as **String**

**Description**
Set or get the textual content selected by the range object.

The number of characters retrieved are not necessarily identical, as there are text cursor positions between the beginning and end of the selected range. Most document elements support an end cursor position different to the beginning cursor position of the following element. Drop-down lists maintain only one cursor position, but can select strings of any length. In the case of radio buttons and check boxes, the text property value holds the string of the corresponding XML element.

If the range selects more than one element, the text is the concatenation of the single texts. XML entities are expanded so that ‘&’ is expected as ‘&amp;’.

Setting the text to the empty string, does not delete any XML elements. Use [Cut](#), [Delete](#) or [PerformAction](#) instead.

**Errors**

</table>
2.10 **AuthenticSelection**

See also

**Properties**
- Start
- StartTextPosition
- End
- EndTextPosition
2.10.1 **AuthenticSelection.End**

See also

*Declaration:* End as `XMLData`

*Description*
XML element where the current selection ends.
2.10.2 **AuthenticSelection.EndTextPosition**

See also

*Declaration:*** EndTextPosition as long

*Description*
Position in **Authentic.End** where the selection ends.
2.10.3 AuthenticSelection.Start

See also

Declaration: Start as XMLData

Description
XML element where the current selection starts.
2.10.4 AuthenticSelection.StartTextPosition

See also

Declaration: StartTextPosition as long

Description
Position in Authentic.Start where the selection starts.
2.11 AuthenticToolbarButton

Properties

CommandID
2.11.1 **AuthenticToolBarButton.CommandID**

*Declaration:* CommandID as SPYAuthenticCommand

*Description*
The CommandId of the toolbar button.
2.12 **AuthenticToolbarButtons**

**Methods**

- Item
- NewButton
- NewCustomButton
- NewSeparator
- Remove

**Properties**

- Count
2.12.1 **AuthenticToolbarButtons.Count**

*Declaration:* Count as long

*Description*
Get the actual number of buttons on the toolbar
Read only.
2.12.2 AuthenticToolbarButtons.Item

Declaration: Item(n as long) as AuthenticToolbarButton

Description
Get the n'th Button of the current toolbar. n starts at 1.

Example
See the example at AuthenticToolbarButtons.NewButton
2.12.3  AuthenticToolbarButtons.NewButton

**Declaration:** `NewButton(nPosition as long, nCommandId as SPYAuthenticCommand)`

**Description**
Inserts a new Button for the command nCommandId at the position nPosition of the toolbar. nPosition starts at 1.

**Example**
Add a new toolbar, align it on the bottom and add new toolbar buttons

```vba
objPlugIn.ToolbarRows.NewRow(3)  // add a new Toolbar (Row 3)
set ToolbarRow = objPlugIn.ToolbarRows.Item(3)
set Buttons = ToolbarRow.Buttons
ToolbarRow.Alignment = 2         // align Toolbar to bottom
Buttons.NewButton 1, 2          // add Print Button
Buttons.NewButton 1, 3          // add PrintPreview Button
Buttons.NewSeparator 2          // add Separator
Buttons.NewButton 1, 4          // add Validate Button
```

When `StartEditing` or `ReloadToolbars` is called; the modified Toolbar settings are used.
2.12.4 AuthenticToolBarButtons.NewCustomButton

Declaration: NewCustomButton(nPosition as long, strName as String, strTooltip as String, strBitmapURL as String)

Description
Inserts a new custom button with the name strName at the position nPosition of the toolbar. nPosition starts at 1.
strTooltip is taken as the Tooltip text.
strBitmapURL is the location of the bitmap to display for the new button. This path is relative to the path set with the TextStateBmpURL property.

Example
Imagine you have inserted a custom button with the name "MyFunction" to your toolbars. The following event handler for doceditcommand shows you how to react if the user clicked your button and how to set the enabled / disabled state for it.

```<SCRIPT LANGUAGE=javascript FOR=objPlugIn EVENT=doceditcommand>
// event.type is set to "command" if the user clicked the button
if(objPlugIn.event.type == "command")
{
  if(objPlugIn.event.srcElement.Name == "MyFunction")
    window.alert("You pressed my custom button!");
}

// event.type is set to "update" if the button state must be set
if(objPlugIn.event.type == "update")
{
  if(objPlugIn.event.srcElement.Name == "MyFunction")
    {
      // we enable the button if only one element is selected

        objPlugIn.event.returnValue = 1;
      else
        objPlugIn.event.returnValue = 0;

      objPlugIn.event.cancelBubble = true;
    }
}
</SCRIPT>
2.12.5  **AuthenticToolbarButtons.NewSeparator**

*Declaration:* NewSeparator(nPosition as long)

**Description**
Inserts a Separator at the position nPosition of the toolbar. nPosition starts at 1.

**Example**
See the example at [AuthenticToolbarButtons.NewButton](#)
2.12.6 AuthenticToolbarButtons.Remove

Declaration: Remove(nPosition as long)

Description
Removes the button or Separator on position nPosition of the toolbar. nPosition starts at 1.
2.13 AuthenticToolbarRow

Methods
Alignment

Properties
Buttons
2.13.1 AuthenticToolbarRowAlignment

Declaration: Alignment(nAlign as SPYAuthenticToolbarAlignment)

Description
Get or sets the alignment of the toolbar in the plug-in.

Example
Align all toolbars to the bottom:

for each ToolbarRow in objPlugin.ToolbarRows
    ToolbarRow.Alignment = 2
next
2.13.2 AuthenticToolbarRowButtons

Declaration: Buttons as AuthenticToolbarButtons

Description
Get all Buttons of the toolbar

Example
See the example at AuthenticToolbarButtons.NewButton
2.14 AuthenticToolbarRows

Methods
- Item
- RemoveRow
- NewRow

Properties
- Count
2.14.1 **AuthenticToolbarRows.Count**

**Declaration:** `Count as long`

**Description**
Get the actual number of defined toolbars
Read only.
2.14.2 **AuthenticToolbarRows.Item**

*Declaration:* `Item(nPosition as long) as AuthenticToolbarRow`

*Description*
Get the toolbar on position nPosition. nPosition starts with "1"
Read only.

*Example*
See the example at [AuthenticToolbarButtons.NewButton](#)
2.14.3 AuthenticToolbarRows.RemoveRow

**Declaration:** RemoveRow(nPosition as long)

**Description**
Remove the toolbar at nPosition from the user interface. nPosition starts at 1.
2.14.4 **AuthenticToolbarRows.NewRow**

*Declaration:* `NewRow(nPosition as long)`

*Description*
Creates and inserts a new Toolbar row. `nPosition` starts at 1.

*Example*
See the example at `AuthenticToolbarButtons.NewButton`
2.15 **AuthenticView**

**Description**

AuthenticView and its child object **AuthenticRange** provide you with an interface for Authentic View, which allow easy and consistent modification of document contents. Functional overlap with already existing methods and properties in Authentic object is intentional, making the content modification functions of the Authentic object obsolete. Usage of the new AuthenticView interface is strongly recommended.

AuthenticView gives you easy access to specific features such as printing, the multi-level undo buffer, and the current cursor selection, or position.

AuthenticView uses objects of type **AuthenticRange** to make navigation inside the document straight-forward, and to allow for the flexible selection of logical text elements. Use the properties **DocumentBegin**, **DocumentEnd**, or **WholeDocument** for simple selections, while using the **Goto** method for more complex selections. To navigate relative to a given document range, see the methods and properties of the **AuthenticRange** object.
2.15.1 Events

OnBeforeCopy

Event: OnBeforeCopy() as Boolean

XMLSpy scripting environment - VBScript:
Function On_AuthenticBeforeCopy()
    ' On_AuthenticBeforeCopy = False ' to disable operation
End Function

XMLSpy scripting environment - JScript:
function On_AuthenticBeforeCopy()
{
    // return false; /* to disable operation */
}

XMLSpy IDE Plugin:
IXMLSpyPlugIn.OnEvent (21, ...) // nEventId = 21

Description
This event gets triggered before a copy operation gets performed on the document. Return True (or nothing) to allow copy operation. Return False to disable copying.

OnBeforeCut

Event: OnBeforeCut() as Boolean

XMLSpy scripting environment - VBScript:
Function On_AuthenticBeforeCut()
    ' On_AuthenticBeforeCut = False ' to disable operation
End Function

XMLSpy scripting environment - JScript:
function On_AuthenticBeforeCut()
{
    // return false; /* to disable operation */
}

XMLSpy IDE Plugin:
IXMLSpyPlugIn.OnEvent (20, ...) // nEventId = 20

Description
This event gets triggered before a cut operation gets performed on the document. Return True (or nothing) to allow cut operation. Return False to disable operation.

OnBeforeDelete

Event: OnBeforeDelete() as Boolean

XMLSpy scripting environment - VBScript:
Function On_AuthenticBeforeDelete()
' On_AuthenticBeforeDelete = False  ' to disable operation
End Function

**XMLSpy scripting environment - JScript:**

```javascript
function On_AuthenticBeforeDelete()
{
    // return false; /* to disable operation */
}
```

**XMLSpy IDE Plugin:**

```csharp
IXMLSpyPlugIn.OnEvent(22, ...) // nEventId = 22
```

**Description**

This event gets triggered before a delete operation gets performed on the document. Return `True` (or nothing) to allow delete operation. Return `False` to disable operation.

**OnBeforeDrop**

**Event:** `OnBeforeDrop (i_nXPos as Long, i_nYPos as Long, i_ipRange as AuthenticRange, i_ipData as cancelBoolean)`

**XMLSpy scripting environment - VBScript:**

```vbscript
Function On_AuthenticBeforeDrop(nXPos, nYPos, objRange, objData)
    ' On_AuthenticBeforeDrop = False  ' to disable operation
End Function
```

**XMLSpy scripting environment - JScript:**

```javascript
function On_AuthenticBeforeDrop(nXPos, nYPos, objRange, objData)
{
    // return false; /* to disable operation */
}
```

**XMLSpy IDE Plugin:**

```csharp
IXMLSpyPlugIn.OnEvent(11, ...) // nEventId = 11
```

**Description**

This event gets triggered whenever a previously dragged object gets dropped inside the application window. All event related information gets passed as parameters.

The first two parameters specify the mouse position at the time when the event occurred. The parameter `objRange` passes a range object that selects the XML element below the mouse position. The value of this parameter might be `NULL`. Be sure to check before you access the range object. The parameter `objData` allows to access information about the object being dragged.

Return `False` to cancel the drop operation. Return `True` (or nothing) to continue normal operation.

**Examples**

```
' VB code snippet - connecting to object level events
' -------------------------------------------------------------
' access XMLSpy (without checking for any errors)
Dim objSpy As XMLSpyLib.Application
```
Set objSpy = GetObject("", "XMLSpy.Application")

' this is the event callback routine connected to the OnBeforeDrop
' event of object objView
Private Function objView_OnBeforeDrop(ByVal i_nXPos As Long, ByVal i_nYPos As Long,
                                      ByVal i_ipRange As IAuthenticRange,
                                      ByVal i_ipData As IAuthenticDataTransfer) As Boolean
    If (Not i_ipRange Is Nothing) Then
        MsgBox("Dropping on content is prohibited");
        Return False;
    Else
        Return True;
    End If
End Function

' use VBA keyword WithEvents to connect to object-level event
Dim WithEvents objView As XMLSpyLib.AuthenticView
Set objView = objSpy.ActiveDocument.AuthenticView

' continue here with something useful ...
' and serve the windows message loop

OnBeforePaste

Event: OnBeforePaste (objData as Variant, strType as String) as Boolean

XMLSpy scripting environment - VBScript:
Function On_AuthenticBeforePaste(objData, strType)
    ' On_AuthenticBeforePaste = False  ' to disable operation
End Function

XMLSpy scripting environment - JScript:
function On_AuthenticBeforePaste(objData, strType)
{
    // return false; /* to disable operation */
}

XMLSpy IDE Plugin:
IXMLSpyPlugIn.OnEvent(19, ...)  // nEventId = 19

Description
This event gets triggered before a paste operation gets performed on the document. The parameter strType is one of "TEXT", "UNICODETEXT" or "IUNKNOWN". In the first two cases objData contains a string representation of the object that will be pasted. In the later case, objData contains a pointer to an IUnknown COM interface.

Return True (or nothing) to allow paste operation. Return False to disable operation.
OnBeforeSave

**Event:** OnBeforeSave (SaveAs flag) as Boolean

**Description:** OnBeforeSave gives the opportunity to e.g. warn the user about overwriting the existing XML document, or to make the document read-only when specific circumstances are not met. The event will be fired before the file dialog is shown. (Please note, that the event fires when saving the XML document, and not when saving the SPS design in StyleVision.)

OnDragOver

**Event:** OnDragOver (nXPos as Long, nYPos as Long, eMouseEvent as SPYMouseEvent, objRange as AuthenticRange, objData as AuthenticDataTransfer) as Boolean

**XMLSpy scripting environment - VBScript:**

Function On_AuthenticDragOver (nXPos, nYPos, eMouseEvent, objRange, objData)
    ' On_AuthenticDragOver = False  ' to disable operation
End Function

**XMLSpy scripting environment - JScript:**

function On_AuthenticDragOver (nXPos, nYPos, eMouseEvent, objRange, objData)
{
    // return false;  /* to disable operation */
}

**XMLSpy IDE Plugin:**

IXMLSpyPlugIn.OnEvent (10, ...)  // nEventId = 10

**Description**

This event gets triggered whenever an object from within our outside of Authentic View gets dragged with the mouse over the application window. All event related information gets passed as parameters.

The first three parameters specify the mouse position, the mouse button status and the status of the virtual keys at the time when the event occurred. The parameter objRange passes a range object that selects the XML element below the mouse position. The value of this parameter might be **NULL**. Be sure to check before you access the range object. The parameter objData allows to access information about the object being dragged.

Return *False* to cancel the drag operation. Return *True* (or nothing) to continue normal operation.

**Examples**

' ---------
' VB code snippet - connecting to object level events
' ---------
' access XMLSpy (without checking for any errors)
Dim objSpy As XMLSpyLib.Application
Set objSpy = GetObject("", "XMLSpy.Application")
Private Function objView_OnDragOver(ByVal i_nXPos As Long, ByVal i_nYPos As Long,
ByVal i_eMouseEvent As SPYMouseEvent,
ByVal i_ipRange As IAuthenticRange,
ByVal i_ipData As IAuthenticDataTransfer) As Boolean

    If (((i_eMouseEvent And spyShiftKeyDownMask) <> 0) And
        (Not i_ipRange Is Nothing)) Then
        MsgBox("Floating over element " &
            i_ipRange.FirstXMLData.Parent.Name);
    End If

    Return True;
End Function

Dim WithEvents objView As XMLSpyLib.AuthenticView
Set objView = objSpy.ActiveDocument.AuthenticView

OnKeyboardEvent

Event: OnKeyboardEvent (eKeyEvent as SPYKeyEvent, nKeyCode as Long,
nVirtualKeyStatus as Long) as Boolean

XMLSpy scripting environment - VBScript:
Function On_AuthenticKeyboardEvent(eKeyEvent, nKeyCode, nVirtualKeyStatus)
    ' On_AuthenticKeyboardEvent = True ' to cancel bubbling of event
End Function

XMLSpy scripting environment - JScript:
function On_AuthenticKeyboardEvent(eKeyEvent, nKeyCode, nVirtualKeyStatus)
{
    // return false; /* to cancel bubbling of event */
}

XMLSpy IDE Plugin:
IXMLSpyPlugIn.OnEvent (30, ...) // nEventId = 30

Description
This event gets triggered for WM_KEYDOWN, WM_KEYUP and WM_CHAR Windows messages.

The actual message type is available in the eKeyEvent parameter. The status of virtual keys is combined in the parameter nVirtualKeyStatus. Use the bit-masks defined in the enumeration datatype SPYVirtualKeyMask, to test for the different keys or their combinations.
REMARK: The following events from the scripting environment and IDE Plugin of XMLSpy are still supported but become obsolete with this event:

- `On_AuthenticKeyUp()` \( \text{IXMLSpyPlugIn.OnEvent}(13,\ldots) \) // \( \text{nEventId} = 13 \)
- `On_AuthenticKeyDown()` \( \text{IXMLSpyPlugIn.OnEvent}(12,\ldots) \) // \( \text{nEventId} = 12 \)
- `On_AuthenticKeyPressed()` \( \text{IXMLSpyPlugIn.OnEvent}(14,\ldots) \) // \( \text{nEventId} = 14 \)

Examples

' ----------------------------------------------------------------------------
' VB code snippet - connecting to object level events
' ----------------------------------------------------------------------------
' access XMLSpy (without checking for any errors)
Dim objSpy As XMLSpyLib.Application
Set objSpy = GetObject("", "XMLSpy.Application")

' this is the event callback routine connected to the OnKeyboard
' event of object objView
Private Function objView_OnKeyboardEvent(ByVal i_keyEvent As Long, ByVal io pnKeyCode As Long, ByVal i_nVirtualKeyStatus As Long) As Boolean
    If ((i_keyEvent = XMLSpyLib.spyKeyUp) And ((i_nVirtualKeyStatus And XMLSpyLib.spyCtrlKeyMask) <> 0)) Then
        MsgBox ("Ctrl " & io pnKeyCode & " pressed")
        objView_OnKeyboardEvent = True
    Else
        objView_OnKeyboardEvent = False
    End If
End Function

' use VBA keyword WithEvents to connect to object-level event
Dim WithEvents objView As XMLSpyLib.AuthenticView
Set objView = objSpy.ActiveDocument.AuthenticView

' continue here with something useful ...
' and serve the windows message loop

OnLoad
Event: OnLoad ()

Description: OnLoad can be used e.g. to restrict some AuthenticView functionality, as shown in the example below:

function On_AuthenticLoad( )
{
    // We are disabling all entry helpers in order to prevent user from manipulating XML tree
    AuthenticView.DisableElementEntryHelper();
    AuthenticView.DisableAttributeEntryHelper();

    // We are also disabling the markup buttons for the same purpose
    AuthenticView.SetToolbarButtonState( 'AuthenticMarkupSmall', authenticToolbarButtonDisabled );
    AuthenticView.SetToolbarButtonState( 'AuthenticMarkupLarge',

In the example the status of the Markup Small, Markup Large, Markup Mixed toolbar buttons are manipulated with the help of button identifiers. See complete list.

**OnMouseEvent**

*Event:* `OnMouseEvent` *(nXPos as Long, nYPos as Long, eMouseEvent as SPYMouseEvent, objRange as AuthenticRange) as Boolean*

*XMLSpy scripting environment - VBScript:*

```vbscript
Function On_AuthenticMouseEvent(nXPos, nYPos, eMouseEvent, objRange)
    ' On_AuthenticMouseEvent = True  ' to cancel bubbling of event
End Function
```

*XMLSpy scripting environment - JScript:*

```javascript
function On_AuthenticMouseEvent(nXPos, nYPos, eMouseEvent, objRange)
{
    // return false; /* to cancel bubbling of event */
}
```

**XMLSpy IDE Plugin:**

```vbnet
IXMLSpyPlugIn.OnEvent(31, ...) // nEventId = 31
```

**Description**

This event gets triggered for every mouse movement and mouse button Windows message.

The actual message type and the mouse buttons status, is available in the `eMouseEvent` parameter. Use the bit-masks defined in the enumeration datatype `SPYMouseEvent` to test for the different messages, button status, and their combinations.

The parameter `objRange` identifies the part of the document found at the current mouse cursor position. The range objects always selects a complete tag of the document. (This might change in future versions, when a more precise positioning mechanism becomes available). If no selectable part of the document is found at the current position, the range object is `null`.

**REMARK:** The following events from the scripting environment and IDE Plugin of XMLSpy are still supported but become obsolete with this event:

- `On_AuthenticMouseMove()` `IXMLSpyPlugIn.OnEvent(15, ...) // nEventId = 15`
- `On_AuthenticButtonUp()` `IXMLSpyPlugIn.OnEvent(16, ...) // nEventId = 16`
- `On_AuthenticButtonDown()` `IXMLSpyPlugIn.OnEvent(17, ...) // nEventId = 17`
- `On_AuthenticButtonDoubleClick()` `IXMLSpyPlugIn.OnEvent(24, ...) // nEventId = 24`

**Examples**

```xml
authenticToolbarButtonDisabled );
    AuthenticView.SetToolbarButtonState( 'AuthenticMarkupMixed',
authenticToolbarButtonDisabled );
}
```
' VB code snippet - connecting to object level events
' ----------------------------------------------------------------------------
' access XMLSpy (without checking for any errors)
Dim objSpy As XMLSpyLib.Application
Set objSpy = GetObject("", "XMLSpy.Application")

' this is the event callback routine connected to the OnMouseEvent
' event of object objView. If you click with the left mouse button
' while pressing a control key, the current selection will be set
' to the tag below the current mouse cursor position
Private Function objView_OnMouseEvent(ByVal i_nXPos As Long, ByVal i_nYPos As Long, ByVal i_eMouseEvent As XMLSpyLib.SPYMouseEvent, ByVal i_pRange As XMLSpyLib.IAuthenticRange) As Boolean
If (i_eMouseEvent = (XMLSpyLib.spyLeftButtonDownMask Or XMLSpyLib.spyCtrlKeyDownMask)) Then
  On Error Resume Next
  i_pRange.Select
  objView_OnMouseEvent = True
Else
  objView_OnMouseEvent = False
End If
End Function

' use VBA keyword WithEvents to connect to object-level event
Dim WithEvents objView As XMLSpyLib.AuthenticView
Set objView = objSpy.ActiveDocument.AuthenticView

' continue here with something useful ...
' and serve the windows message loop

**OnSelectionChanged**

*Event:* OnSelectionChanged *(objNewSelection as AuthenticRange)*

**XMLSpy scripting environment - VBScript:**
Function On_AuthenticSelectionChanged *(objNewSelection)*
End Function

**XMLSpy scripting environment - JScript:**
function On_AuthenticSelectionChanged *(objNewSelection)*
{
}

**XMLSpy IDE Plugin:**
IXMLSpyPlugIn.OnEvent *(23, ...) // nEventId = 23*

**Description**
This event gets triggered whenever the selection in the user interface changes.

**Examples**
' ----------------------------------------------------------------------------
' VB code snippet - connecting to object level events
' ----------------------------------------------------------------------------
' access XMLSpy (without checking for any errors)
Dim objSpy As XMLSpyLib.Application
Set objSpy = GetObject("", "XMLSpy.Application")

' this is the event callback routine connected to the OnSelectionChanged event of object objView
Private Sub objView_OnSelectionChanged (ByVal i_ipNewRange As XMLSpyLib.IAuthenticRange)
    MsgBox ("new selection: " & i_ipNewRange.Text)
End Sub

' use VBA keyword WithEvents to connect to object-level event
Dim WithEvents objView As XMLSpyLib.AuthenticView
Set objView = objSpy.ActiveDocument.AuthenticView

' continue here with something useful ...
' and serve the windows message loop

OnToolbarButtonClicked

Event: OnToolbarButtonClicked (Button identifier)

Description: OnToolbarButtonClicked is fired when a toolbar button was clicked by user. The parameter button identifier helps to determine which button was clicked. The list of predefined button identifiers is below:

- AuthenticPrint
- AuthenticPrintPreview
- AuthenticUndo
- AuthenticRedo
- AuthenticCut
- AuthenticCopy
- AuthenticPaste
- AuthenticClear
- AuthenticMarkupHide
- AuthenticMarkupLarge
- AuthenticMarkupMixed
- AuthenticMarkupSmall
- AuthenticValidate
- AuthenticChangeWorkingDBXMLCell
- AuthenticSave
- AuthenticSaveAs
- AuthenticReload
- AuthenticTableInsertRow
- AuthenticTableAppendRow
- AuthenticTableDeleteRow
- AuthenticTableInsertCol
- AuthenticTableAppendCol
- AuthenticTableDeleteCol
- AuthenticTableJoinCellRight
- AuthenticTableJoinCellLeft
- AuthenticTableJoinCellAbove
- AuthenticTableJoinCellBelow
- AuthenticTableSplitCellHorizontally
For custom buttons the user might add his own identifiers. Please, note that the user must take care, as the identifiers are not checked for uniqueness. The same identifiers can be used to identify buttons in the `Set/GetToolbarState()` COM API calls. By adding code for different buttons, the user is in the position to completely redefine the AuthenticView toolbar behavior, adding own methods for table manipulation, etc.

**OnToolbarButtonExecuted**

*Event:* `OnToolbarButtonExecuted` *(Button identifier)*

*Description:* `OnToolbarButtonExecuted` is fired when a toolbar button was clicked by user. The parameter button identifier helps to determine which button was clicked. See the list of predefined button identifiers.

`OnToolbarButtonExecuted` is fired after the toolbar action was executed. It is useful e.g. to add update code, as shown in the example below:

```javascript
//event fired when a toolbar button action was executed
function On_AuthenticToolbarButtonExecuted( varBtnIdentifier )
{
    // After whatever command user has executed - make sure to update toolbar button states
    UpdateOwnToolbarButtonStates();
}
```

In this case `UpdateOwnToolbarButtonStates` is a user function defined in the Global Declarations.

**OnUserAddedXMLNode**

*Event:* `OnUserAddedXMLNode` *(XML node)*

*Description:* `OnUserAddedXMLNode` will be fired when the user adds an XML node as a primary
action. This happens in the situations, where the user clicks on

- auto-add hyperlinks (see example OnUserAddedXMLNode.sps)
- the Insert…, Insert After…, Insert Before… context menu items
- Append row, Insert row toolbar buttons
- Insert After…, Insert Before… actions in element entry helper (outside StyleVision)

The event doesn’t get fired on Duplicate row, or when the node was added externally (e.g. via COM API), or on Apply (e.g. Text State Icons), or when in XML table operations or in DB operations.

The event parameter is the XML node object, which was added giving the user an opportunity to manipulate the XML node added. An elaborate example for an event handler can be found in the OnUserAddedXMLNode.sps file (in the Authentic/Scripting folder of the Examples project in the Project Window).
2.15.2 AuthenticView.Application

See also

**Property:** Application as Authentic (read-only)

**Description**
Access the application object.

**Errors**
- 2000: The authentic view object is no longer valid.
- 2005: Invalid address for the return parameter was specified.
2.15.3 **AuthenticView.AsXMLString**

See also

*Property:* `AsXMLString` as `String`

**Description**
Returns or sets the document content as an XML string. Setting the content to a new value does not change the schema file or sps file in use. If the new `XMLString` does not match the actual schema file error 2011 gets returned.

**Errors**
- 2000 The authentic view object is no longer valid.
- 2011 `AsXMLString` was set to a value which is no valid XML for the current schema file.
2.15.4 AuthenticView.ContextMenu

**Property:** ContextMenu as ContextMenu

**Description**
The property ContextMenu gives access to customize the context menu. The best place to do it is in the event handler OnContextMenuActivated.

**Errors**
- 2000 Invalid object.
- 2005 Invalid parameter.
2.15.5  **AuthenticView.CreateXMLNode**

*Method:* CreateXMLNode (*nKind* as SPYXMLDataKind) as XMLData

**Return Value**
The method returns the new XMLData object.

**Description**
To create a new XMLData object use the CreateXMLNode() method. See also Using XMLData.

**Errors**
- 2000  Invalid object.
- 2012  Cannot create XML node.
2.15.6  AuthenticView.DisableAttributeEntryHelper

*Method:* DisableAttributeEntryHelper()

**Description**
DisableAttributeEntryHelper() disables the attribute entry helper in XMLSpy, Authentic Desktop and Authentic Browser plug-in.

**Errors**
- 2000  Invalid object.
2.15.7 **AuthenticView.DisableElementEntryHelper**

*Method:* DisableElementEntryHelper()

**Description**

DisableElementEntryHelper() disables the element entry helper in XMLSpy, Authentic Desktop and Authentic Browser plug-in.

**Errors**

2000  Invalid object.
2.15.8 AuthenticView.DisableEntityEntryHelper

Method: DisableEntityEntryHelper()

Description
DisableEntityEntryHelper() disables the entity entry helper in XMLSpy, Authentic Desktop and Authentic Browser plug-in.

Errors
2000 Invalid object.
2.15.9 **AuthenticView.DocumentBegin**

See also

*Property:* DocumentBegin as AuthenticRange (read-only)

**Description**
Retrieve a range object that points to the beginning of the document.

**Errors**
- 2000  The authentic view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.15.10 AuthenticView.DocumentEnd

See also

*Property:* DocumentEnd as AuthenticRange (read-only)

*Description*
Retrieve a range object that points to the end of the document.

*Errors*

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>The authentic view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.15.11 AuthenticView.DoNotPerformStandardAction

*Method:* DoNotPerformStandardAction()

**Description**

DoNotPerformStandardAction() serves as cancel bubble for macros; stops further execution after macro has finished.

**Errors**

2000  Invalid object.
2.15.12 AuthenticView.EvaluateXPath

**Method:** EvaluateXPath (XMLData, string expression) as string

**Return Value**
The method returns a string

**Description**
EvaluateXPath() executes an XPath expressions with the given XML context node. The result returned as string, in the case of a sequence it is a space-separated string.

**Errors**
- 2000 Invalid object.
- 2005 Invalid parameter.
- 2008 Internal error.
- 2013 XPath error.
2.15.13 AuthenticView.Event

See also

Property: Event as AuthenticEvent (read-only)

Description
This property gives access to parameters of the last event in the same way as OldAuthenticView.event does. Since all events for the scripting environment and external clients are now available with parameters this Event property should only be used from within IDE-Plugins.

Errors
2000   The authentic view object is no longer valid.
2005   Invalid address for the return parameter was specified.
2.15.14 AuthenticView.EventContext

**Property:** EventContext as EventContext

**Description**
EventContext property gives access to the running macros context. See the EventContext interface description for more below details.

**Errors**
- 2000  Invalid object.
2.15.15 **AuthenticView.GetToolbarButtonState**

*Method:* `GetToolbarButtonState (ButtonIdentifier as string) as AuthenticToolbarButtonState`

**Return Value**
The method returns `AuthenticToolbarButtonState`.

**Description**
`GetToolbarButtonState` queries the status of a toolbar button, and lets the user disable or enable the button, identified via its button identifier (see list above). One usage is to disable toolbar buttons permanently. Another usage is to put `SetToolbarButtonState` in the `OnSelectionChanged` event handler, as toolbar buttons are updated regularly when the selection changes in the document.

Toolbar button states are given by the listed enumerations.

The default state means that the enable/disable of the button is governed by `AuthenticView`. When the user sets the button state to enable or disable, the button remains in that state as long as the user does not change it.

**Errors**
- 2000  Invalid object.
- 2005  Invalid parameter.
- 2008  Internal error.
- 2014  Invalid button identifier.
2.15.16 AuthenticView.Goto

See also

**Method:** Goto *(eKind as SPYAuthenticElementKind, nCount as Long, eFrom as SPYAuthenticDocumentPosition) as AuthenticRange*

**Description**
Retrieve a range object that points to the beginning of the *nCount* element of type *eKind*. The start position is defined by the parameter *eFrom*. Use positive values for *nCount* to navigate to the document end. Use negative values to navigate towards the beginning of the document.

**Errors**
- **2000** The authentic view object is no longer valid.
- **2003** Target lies after end of document.
- **2004** Target lies before beginning of document.
- **2005** Invalid element kind specified.
- The document position to start from is not one of *spyAuthenticDocumentBegin* or *spyAuthenticDocumentEnd*.
- Invalid address for the return parameter was specified.

**Examples**
```vba
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

On Error Resume Next
Dim objRange
' goto beginning of first table in document
Set objRange = objAuthenticView.Goto (spyAuthenticTable, 1, spyAuthenticDocumentBegin)
If (Err.number = 0) Then
   objRange.Select()
Else
   MsgBox "No table found in document"
End If
```
2.15.17 AuthenticView.IsRedoEnabled

See also

*Property:* IsRedoEnabled as Boolean (read-only)

*Description*
True if redo steps are available and *Redo* is possible.

*Errors*
- 2000  The authentic view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.15.18 AuthenticView.IsUndoEnabled

See also

Property: IsUndoEnabled as Boolean (read-only)

Description
True if undo steps are available and Undo is possible.

Errors
2000  The authentic view object is no longer valid.
2005  Invalid address for the return parameter was specified.
2.15.19 AuthenticView.MarkupVisibility

See also

Property: MarkupVisibility as SPYAuthenticMarkupVisibility

Description
Set or get current visibility of markup.

Errors

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>The authentic view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid enumeration value was specified.</td>
</tr>
<tr>
<td></td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.15.20 AuthenticView.Parent

See also

**Property:** Parent as Authentic (read-only)

**Description**
Access the Application.

**Errors**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>The authentic view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.15.21 AuthenicView.Print

See also

Method: Print (bWithPreview as Boolean, bPromptUser as Boolean)

Description
Print the document shown in this view. If bWithPreview is set to True, the print preview dialog pops up. If bPromptUser is set to True, the print dialog pops up. If both parameters are set to False, the document gets printed without further user interaction.

Errors
2000  The authentic view object is no longer valid.
2.15.22 AuthenticView.Redo

See also

**Method:** Redo () as Boolean

**Description**
Redo the modification undone by the last undo command.

**Errors**
- 2000 The authentic view object is no longer valid.
- 2005 Invalid address for the return parameter was specified.
2.15.23 AuthenticView.Selection

See also

**Property:** Selection as AuthenticRange

**Description**
Set or get current text selection in user interface.

**Errors**
- 2000 The authentic view object is no longer valid.
- 2002 No cursor selection is active.
- 2005 Invalid address for the return parameter was specified.

**Examples**
```vbnet
' ---------------------------------------
'               VBScript
' ---------------------------------------
Dim objAuthenticView
Set objAuthenticView = objPlugin.AuthenticView

' if we are the end of the document, re-start at the beginning
If (objAuthenticView.Selection.IsEqual(objAuthenticView.DocumentEnd)) Then
    objAuthenticView.Selection = objAuthenticView.DocumentBegin
Else
    ' objAuthenticView.Selection =
    objAuthenticView.Selection.GotoNextCursorPosition()
    ' or shorter:
    objAuthenticView.Selection.GotoNextCursorPosition().Select
End If
```
2.15.24 AuthenticView.SetToolbarButtonState

**Method:** `AuthenticView.SetToolbarButtonState(ButtonIdentifier as string, AuthenticToolbarButtonState state)`

**Description**
`SetToolbarButtonState` queries the status of a toolbar button, and lets the user disable or enable the button, identified via its button identifier (see list above). One usage is to disable toolbar buttons permanently. Another usage is to put `SetToolbarButtonState` in the `OnSelectionChanged` event handler, as toolbar buttons are updated regularly when the selection changes in the document.

Toolbar button states are given by the listed enumerations.

The default state means that the enable/disable of the button is governed by `AuthenticView`. When the user sets the button state to enable or disable, the button remains in that state as long as the user does not change it.

**Errors**
- 2000 Invalid object.
- 2008 Internal error.
- 2014 Invalid button identifier.
2.15.25 AuthenticView.Undo

See also

Method: Undo () as Boolean

Description
Undo the last modification of the document from within this view.

Errors

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>The authentic view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.15.26 AuthenticView.UpdateXMLInstanceEntities

See also

Method: UpdateXMLInstanceEntities ()

Description
Updates the internal representation of the declared entities, and refills the entry helper. In addition, the validator is reloaded, allowing the XML file to validate correctly. Please note that this may also cause schema files to be reloaded.

Errors
The method never returns an error.

Example

```javascript
// -----------------------------------------
//               JavaScript
// -----------------------------------------
var objDocType;
objDocType = objPlugin.XMLRoot.GetFirstChild(10);
if(objDocType)
{
    var objEntity = objPlugin.CreateChild(14);
    objEntity.Name = "child";
    objEntity.TextValue = "SYSTEM \"child.xml\"";
    objDocType.AppendChild(objEntity);

    objPlugin.AuthenticView.UpdateXMLInstanceEntities();
}
```
2.15.27 AuthenticView.WholeDocument

See also

Property: WholeDocument as AuthenticRange (read-only)

Description
Retrieve a range object that selects the whole document.

Errors
- 2000  The authentic view object is no longer valid.
- 2005  Invalid address for the return parameter was specified.
2.15.28 AuthenticView.XMLDataRoot

See also

Property: XMLDataRoot as XMLData (read-only)

Description
Returns or sets the top-level XMLData element of the current document. This element typically describes the document structure and would be of kind spyXMLDataXMLDocStruct, spyXMLDataXMLEntityDocStruct or spyXMLDataDTDDocStruct..

Errors

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>The authentic view object is no longer valid.</td>
</tr>
<tr>
<td>2005</td>
<td>Invalid address for the return parameter was specified.</td>
</tr>
</tbody>
</table>
2.16 AuthenticXMLTableCommands

Methods
- Insert
- Delete
- AppendRow
- InsertRow
- DeleteRow
- AppendColumn
- InsertColumn
- DeleteColumn
- JoinLeft
- JoinRight
- JoinUp
- JoinDown
- SplitHorizontal
- SplitVertical
- AlignVerticalTop
- AlignVerticalCenter
- AlignVerticalBottom
- AlignHorizontalLeft
- AlignHorizontalRight
- AlignHorizontalCenter
- AlignHorizontalJustify
- EditProperties

Properties
- MayInsert
- MayDelete
- MayAppendRow
- MayInsertRow
- MayDeleteRow
- MayAppendCol
MayInsertCol
MayDeleteCol
MayJoinLeft
MayJoinRight
MayJoinUp
MayJoinDown
MaySplitHorizontal
MaySplitVertical
MayAlignVertical
MayAlignHorizontal
MayEditProperties
2.16.1 AuthenticXMLTableCommands.AlignHorizontalCenter

Declaration: AlignHorizontalCenter()

Description
Sets the horizontal alignment attribute to "center" or clears the attribute if it was set to "center" before.
2.16.2  **AuthenticXMLTableCommands.AlignHorizontalJustify**

*Declaration:* AlignHorizontalJustify()

*Description*
Sets the horizontal alignment attribute to "justify" or clears the attribute if it was set to "justify" before.
2.16.3 **AuthenticXMLTableCommands.AlignHorizontalLeft**

*Declaration:* AlignHorizontalLeft()

*Description*
Sets the horizontal alignment attribute to "left" or clears the attribute if it was set to "left" before.
2.16.4 AuthenticXMLTableCommands.AlignHorizontalRight

Declaration: AlignHorizontalRight()

Description
Sets the horizontal alignment attribute to "right" or clears the attribute if it was set to "right" before.
2.16.5  **AuthenticXMLTableCommands.AlignVerticalBottom**

*Declaration:* AlignVerticalBottom()

*Description*
Sets the vertical alignment attribute to "bottom", or clears the attribute if it was set to "bottom" before.
2.16.6 **AuthenticXMLTableCommands.AlignVerticalCenter**

*Declaration:* AlignVerticalCenter()

*Description*
Sets the vertical alignment attribute to "center", or clears the attribute if it was set to "center" before.
2.16.7 **AuthenticXMLTableCommands.AlignVerticalTop**

*Declaration:* `AlignVerticalTop()`

*Description*
Sets the vertical alignment attribute to "top", or clears the attribute if it was set to "top" before.
2.16.8  AuthenticXMLTableCommands.AppendCol

*Declaration:* AppendCol()

*Description*
Appends a column to the current table.
2.16.9 AuthenticXMLTableCommands.AppendRow

Declaration: AppendRow()

Description
Appends a row to the current table.
2.16.10 AuthenticXMLTableCommands.Delete

Declaration: Delete()

Description
If the user confirmed the dialog the method deletes the currently selected table.
2.16.11 AuthenticXMLTableCommands.DeleteCol

Declaration: DeleteCol()

Description
The method deletes the currently selected column.
If there is only one column left and the user confirmed the dialog, the complete table is deleted.
2.16.12 AuthenticXMLTableCommands.DeleteRow

*Declaration:* DeleteRow()

**Description**
The method deletes the currently selected row.
If there is only one row left and the user confirmed the dialog, the complete table is deleted.
2.16.13 AuthenticXMLTableCommands>EditProperties

Declaration: EditProperties()

Description
Displays the properties dialog for the selected table/cell.
2.16.14 AuthenticXMLTableCommands.Insert

Declaration: Insert()

Description
Displays a dialog and inserts a new table into the existing XML.
2.16.15 AuthenticXMLTableCommands.InsertCol

Declaration: InsertCol()

Description
Inserts a new column before the currently selected column.
2.16.16 AuthenticXMLTableCommands.InsertRow

Declaration: InsertRow()

Description
Inserts a row before the currently selected row.
2.16.17 AuthenticXMLTableCommands.JoinDown

Declaration: JoinDown()

Description
Joins the current cell to the cell immediately below it.
2.16.18 AuthenticXMLTableCommands.JoinLeft

*Declaration:* JoinLeft()

*Description*
Joins the current cell with the cell immediately to its left.
2.16.19 AuthenticXMLTableCommands.JoinRight

Declaration: JoinRight()

Description
Joins the current cell with the cell immediately to its right.
2.16.20 AuthenticXMLTableCommands.JoinUp

*Declaration:* JoinUp()

*Description*

Joins the current cell to the cell immediately above it.
2.16.21 **AuthenticXMLTableCommands.MayAlignHorizontal**

*Declaration:* MayAlignHorizontal as Boolean

*Description*
True if the attributes for horizontal alignment can be set for the current cell.
2.16.22 AuthenticXMLTableCommands.MayAlignVertical

*Declaration:* MayAlignVertical as Boolean

*Description*
True if the attributes for vertical alignment can be set for the current cell.
2.16.23 AuthenticXMLTableCommands.MayAppendCol

Declaration: MayAppendCol as Boolean

Description
True if a column can be appended.
2.16.24 AuthenticXMLTableCommands.MayAppendRow

Declaration: MayAppendRow as Boolean

Description
True if a row can be appended.
Enter topic text here.
2.16.25 AuthenticXMLTableCommands.MayDelete

Declaration: MayDelete as Boolean

Description
The property is true if a table is selected.
2.16.26 AuthenticXMLTableCommands.MayDeleteCol

Declaration: MayDeleteCol as Boolean

Description
True if the current column can be deleted.
2.16.27 AuthenticXMLTableCommands.MayDeleteRow

Declaration: MayDeleteRow as Boolean

Description
True if the current row can be deleted.
2.16.28 AuthenticXMLTableCommands.MayEditProperties

**Declaration:** MayEditProperties as Boolean

**Description**
The property is true if the properties dialog is available for the selected table/cell.
2.16.29 AuthenticXMLTableCommands.MayInsert

Declaration: MayInsert as Boolean

Description
The property is true if the insertion of a new table is possible at the current selection.
2.16.30 AuthenticXMLTableCommands.MayInsertCol

Declaration: MayInsertCol as Boolean

Description
True if a column can be inserted.
2.16.31 AuthenticXMLTableCommands.MayInsertRow

Declaration: MayInsertRow as Boolean

Description
True if a row can be inserted.
2.16.32 AuthenticXMLTableCommands.MayJoinDown

**Declaration:** MayJoinDown as Boolean

**Description**
The property is true if the join down operation is possible for the currently selected cell.
2.16.33 AuthenticXMLTableCommands.MayJoinLeft

*Declaration:* MayJoinLeft as Boolean

*Description*
The property is true if the join left operation is possible for the currently selected cell.
2.16.34 AuthenticXMLTableCommands.MayJoinRight

Declaration: MayJoinRight as Boolean

Description
The property is true if the join right operation is possible for the currently selected cell.
2.16.35 AuthenticXMLTableCommands.MayJoinUp

Declaration: MayJoinUp as Boolean

Description
The property is true if the join up operation is possible for the currently selected cell.
2.16.36 AuthenticXMLTableCommands.MaySplitHorizontal

Declaration: MaySplitHorizontal as Boolean

Description
True if the current cell can be splitted horizontally.
2.16.37 **AuthenticXMLTableCommands.MaySplitVertical**

*Declaration:* MaySplitVertical as Boolean

*Description*
True if the current cell can be split vertically.
2.16.38 AuthenticXMLTableCommands.SplitHorizontal

Declaration: SplitHorizontal()

Description
The method splits the current cell horizontally.
2.16.39 AuthenticXMLTableCommands.SplitVertical

*Declaration:* SplitVertical()

*Description*
The method splits the current cell vertically.
### 2.17 XMLData

See also

**Methods**
- InsertChild
- AppendChild
- EraseAllChildren
- EraseCurrentChild
- GetCurrentChild
- GetFirstChild
- GetNextChild
- GetChild
- GetChildKind
- IsSameNode
- HasChildrenKind
- CountChildren
- CountChildrenKind

**Properties**
- Name
- TextValue
- HasChildren
- MayHaveChildren
- Kind
- Parent

**Description**
You can use the XMLData interface to manipulate the content of the currently displayed XML. This interface is a lightweight COM counterpart of the implementation used inside the plug-in and XMLSpy itself.

To create a new XMLData object use the CreateChild() method of the plug-in interface.
2.17.1 **XMLData.AppendChild**

See also

*Declaration:* `AppendChild(pNewData as XMLData)`

*Description*
AppendChild appends pNewData as last child to the XMLData object. See also "Using XMLData".

*Example*

```vba
Dim objCurrentParent
Dim objNewChild

Set objNewChild = objPlugIn.CreateChild(spyXMLDataElement)
Set objCurrentParent = objPlugIn.XMLRoot

objCurrentParent.AppendChild objNewChild

Set objNewChild = Nothing
```
2.17.2 XMLData.CountChildren

See also

Declaration: CountChildren as long

Description
CountChildren gets the number of children.

Available with TypeLibrary version 1.6

Errors
1500 The XMLData object is no longer valid.
2.17.3 **XMLData.CountChildrenKind**

*See also*

*Declaration:*  \texttt{CountChildrenKind (nKind as SPYXMLDataKind) as long}

*Description*

\texttt{CountChildrenKind} gets the number of children of the specific kind.

Available with TypeLibrary version 1.6

*Errors*

1500 The XMLData object is no longer valid.
2.17.4  **XMLData.EraseAllChildren**

See also

*Declaration:* EraseAllChildren

*Description*

EraseAllChildren deletes all associated children of the XMLData object.

*Example*

The sample erases all elements of the active document.

```vba
Dim objCurrentParent
Set objCurrentParent = objPlugIn.XMLRoot
objCurrentParent.EraseAllChildren
```
2.17.5 **XMLData.EraseChild**

*Method:* `EraseChild` (Child node and new node as `XMLData`)

**Description**
Deletes the given child node.

**Errors**
- 1500: Invalid object.
- 1506: Invalid input xml
- 1510: Invalid parameter.
2.17.6 **XMLData.EraseCurrentChild**

See also

**Declaration:** `EraseCurrentChild`

**Description**

`EraseCurrentChild` deletes the current `XMLData` child object. Before you call `EraseCurrentChild` you must initialize an internal iterator with `XMLData.GetFirstChild`.

**Example**

This JavaScript example deletes all elements with the name “EraseMe”. The code shows you, that it is possible to call `EraseCurrentChild` and `GetNextChild` inside the same loop to continue stepping through the child elements.

```javascript
function DeleteXMLElements(objXMLData)
{
    if(objXMLData == null)
        return;

    if(objXMLData.HasChildren) {
        var objChild;
        objChild = objXMLData.GetFirstChild(-1);

        while(objChild) {
            DeleteXMLElements(objChild);

            try{
                if(objChild.Name == "EraseMe")
                    objXMLData.EraseCurrentChild();

                objChild = objXMLData.GetNextChild();
            }
            catch(Err) {
                objChild = null;
            }
        }
    }
}
```
2.17.7 XMLData.GetChild

See also

Declaration: `GetChild(position as long) as XMLData`

Return Value
Returns an XML element as XMLData object.

Description
`GetChild()` returns a reference to the child at the given index (zero-based).

Available with TypeLibrary version 1.6

Errors
1500 The XMLData object is no longer valid.
1510 Invalid address for the return parameter was specified.
2.17.8  XMLData.GetChildAttribute

Method: GetChildAttribute (Name as string) as XMLData object (NULL on error)

Description
Retrieves the attribute having the given name.

Errors
1500  Invalid object.
1510  Invalid parameter.
2.17.9  **XMLData.GetChildElement**

*Method:* `GetChildElement` (Name as string, position as integer) as XMLData object (null on error)

**Description**
Retrieves the Nth child element with the given name.

**Errors**
- 1500  Invalid object.
- 1510  Invalid parameter.
2.17.10 XMLData.GetChildKind

See also

*Declaration:* `GetChildKind` (`position` as long, `nKind` as `SPYXMLDataKind`) as `XMLData`

**Return Value**
Returns an XML element as `XMLData` object.

**Description**
`GetChildKind()` returns a reference to a child of this kind at the given index (zero-based). The position parameter is relative to the number of children of the specified kind and not to all children of the object.

Available with TypeLibrary version 1.6

**Errors**
- 1500 The XMLData object is no longer valid.
- 1510 Invalid address for the return parameter was specified.
2.17.11 XMLData.GetCurrentChild

See also

Declaration: GetCurrentChild as XMLData

Return Value
Returns an xml element as XMLData object.

Description
GetCurrentChild gets the current child. Before you call GetCurrentChild you must initialize an internal iterator with XMLData.GetFirstChild.
2.17.12 XMLData.GetFirstChild

See also

Declaration: GetFirstChild(nKind as SPYXMLDataKind) as XMLData

Return Value
Returns an xml element as XMLData object.

Description
GetFirstChild initializes a new iterator and returns the first child. Set nKind = -1 to get an iterator for all kinds of children.

Example
See the example at XMLData.GetNextChild.
2.17.13 XMLData.GetNamespacePrefixForURI

*Method:* GetNamespacePrefixForURI (URI as string) Prefix as string

**Description**
Returns the namespace prefix of the supplied URI.

**Errors**
- 1500 Invalid object.
- 1510 Invalid parameter.
2.17.14 XMLData.GetNextChild

See also

*Declaration*: `GetNextChild` as `XMLData`

*Return Value*
Returns an xml element as XMLData object.

*Description*
GetNextChild steps to the next child of this element. Before you call GetNextChild you must initialize an internal iterator with `XMLData.GetFirstChild`.

Check for the last child of the element as shown in the sample below.

*Example*

```vba
On Error Resume Next
Set objParent = objPlugIn.XMLRoot

'get elements of all kinds
Set objCurrentChild = objParent.GetFirstChild(-1)

Do
  'do something useful with the child

  'step to next child
  Set objCurrentChild = objParent.GetNextChild
Loop Until (Err.Number - vbObjectError = 1503)
```
2.17.15 XMLData.GetTextValueXMLDecoded

*Method:* `GetTextValueXMLDecoded` as string

**Description**
Gets the decoded text value of the XML.

**Errors**
- 1500  Invalid object.
- 1510  Invalid parameter.
2.17.16 XMLData.HasChildren

See also

*Declaration:* HasChildren as Boolean

*Description*
The property is true, if the object is parent of other XMLData objects.

This property is read-only.
2.17.17 XMLData.HasChildrenKind

See also

*Declaration:* HasChildrenKind (*nKind* as SPYXMLDataKind) as Boolean

*Description*

The method returns true if the object is the parent of other XMLData objects of the specific kind.

Available with TypeLibrary version 1.6

*Errors*

- 1500 The XMLData object is no longer valid.
- 1510 Invalid address for the return parameter was specified.
2.17.18 `XMLData.InsertChild`

See also

Declaration: `InsertChild(pNewData as XMLData)`

Description
InsertChild inserts the new child before the current child (see also `XMLData.GetFirstChild`, `XMLData.GetNextChild` to set the current child).
2.17.19 XMLData.InsertChildAfter

Method: InsertChildAfter (Child node and new node as XMLData)

Description
Inserts a new XML node after the given node.

Errors
1500  Invalid object.
1506  Invalid input xml
1507  No children allowed
1510  Invalid parameter.
1512  Child is already added
1514  Invalid kind at position
2.17.20 `XMLData.InsertChildBefore`

*Method:* `InsertChildBefore` (Child node and new node as `XMLData`)

**Description**

Inserts a new XML node before the given node.

**Errors**

- 1500  Invalid object.
- 1506  Invalid input xml
- 1507  No children allowed
- 1510  Invalid parameter.
- 1512  Child is already added
- 1514  Invalid kind at position
2.17.21 XMLData.IsSameNode

See also

*Declaration:* `IsSameNode(pNodeToCompare as XMLData) as Boolean`

*Description*
Returns true if pNodeToCompare references to the same node as the object itself.
2.17.22 XMLData.Kind

See also

*Declaration:* Kind as SPYXMLDataKind

*Description*
Kind of this XMLData object.

This property is read-only.
2.17.23 XMLData.MayHaveChildren

See also

Declaration: MayHaveChildren as Boolean

Description
Tells if it is allowed to add children to this XMLData object.

This property is read-only.
2.17.24 XMLData.Name

See also

*Declaration:* Name as String

*Description*
Used to modify and to get the name of the XMLData object.
2.17.25 XMLData.Parent

See also

*Declaration:* Parent as XMLData

*Return value*
Parent as XMLData object.
Nothing (or NULL) if there is no parent element.

*Description*
Parent of this element.

This property is read-only.
2.17.26 XMLData.SetTextValueXMLDecoded

Method: `SetTextValueXMLDecoded` (string value)

Description
Sets the encoded text value of the XML.

Errors
- 1500 Invalid object.
- 1513 Modification not allowed.
2.17.27 XMLData.TextValue

See also

Declaration: TextValue as String

Description
Used to modify and to get the text value of this XMLData object. See also "Using XMLData".
3 Enumerations

This section contains a listing and description of Authentic Browser enumerations.
3.1 **SPYAuthenticActions**

**Description**
Actions that can be performed on `AuthenticRange` objects.

**Possible values:**
- `spyAuthenticInsertAt` = 0
- `spyAuthenticApply` = 1
- `spyAuthenticClearSurr` = 2
- `spyAuthenticAppend` = 3
- `spyAuthenticInsertBefore` = 4
- `spyAuthenticRemove` = 5
3.2  **SPYAuthenticCommand**

**Description**
Enumeration of all available commands.

**Possible values:**

// CommandGroupMain
   k_CommandSeparator     = 0
   k_CommandSave           = 1
   k_CommandPrint          = 2
   k_CommandPrintPreview   = 3
   k_CommandValidate       = 4
   k_CommandUndo           = 5
   k_CommandRedo           = 6

// CommandGroupEdit
   k_CommandEditCut        = 7
   k_CommandEditCopy       = 8
   k_CommandEditPaste      = 9
   k_CommandEditFind       = 10
   k_CommandEditRepeat     = 11
   k_CommandEditReplace    = 12

// CommandGroupMarkup
   k_CommandMarkupHide     = 13
   k_CommandMarkupLarge    = 14

// CommandGroupRow
   k_CommandRowAppend      = 15
   k_CommandRowInsert      = 16
   k_CommandRowDuplicate   = 17
   k_CommandRowMoveUp      = 18
   k_CommandRowMoveDown    = 19
   k_CommandRowDelete      = 20

// CommandGroupXMLTables
   k_CommandXMLTableInsert = 21
   k_CommandXMLTableDelete = 22
   k_CommandXMLTableAppendRow = 23
   k_CommandXMLTableInsertRow = 24
   k_CommandXMLTableDeleteRow = 25
   k_CommandXMLTableAppendCol = 26
   k_CommandXMLTableInsertCol = 27
   k_CommandXMLTableDeleteCol = 28
   k_CommandXMLTableJoinRight = 29
   k_CommandXMLTableJoinLeft = 30
   k_CommandXMLTableJoinUp  = 31
   k_CommandXMLTableJoinDown = 32
   k_CommandXMLTableSplitHorz = 33
   k_CommandXMLTableSplitVert = 34
   k_CommandXMLTableVALignTop = 35
   k_CommandXMLTableVALignCenter = 36
   k_CommandXMLTableVALignBottom = 37
k_CommandXMLTableAlignLeft       = 38
k_CommandXMLTableAlignCenter     = 39
k_CommandXMLTableAlignRight      = 40
k_CommandXMLTableAlignJustify    = 41
k_CommandXMLTableEditProperties  = 42

// since TypeLib 1.2
k_CommandCheckSpelling           = 43
k_CommandAbout                    = 44
k_CommandPackageManagement        = 45
3.3  SPYAuthenticCommandGroup

Description
Groups to which a command can belong.

Possible values:
- k_CommandGroupMain  = 0
- k_CommandGroupEdit  = 1
- k_CommandGroupMarkup = 2
- k_CommandGroupRow   = 3
- k_CommandGroupXMLTables = 4
3.4 SPYAuthenticDocumentPosition

Description
Relative and absolute positions used for navigating with AuthenticRange objects.

Possible values:
spyAuthenticDocumentBegin = 0
spyAuthenticDocumentEnd = 1
spyAuthenticRangeBegin = 2
spyAuthenticRangeEnd = 3
3.5 **SPYAuthenticElementActions**

**Description**
Actions that can be used with `GetAllowedElements`.

**Possible values:**
- `k_ActionInsertAt` = 0
- `k_ActionApply` = 1
- `k_ActionClearSurr` = 2
- `k_ActionAppend` = 3
- `k_ActionInsertBefore` = 4
- `k_ActionRemove` = 5
3.6 **SPYAuthenticElementKind**

**Description**
Enumeration of the different kinds of elements used for navigation and selection within the AuthenticRange and AuthenticView objects.

**Possible values:**
- spyAuthenticChar = 0
- spyAuthenticWord = 1
- spyAuthenticLine = 3
- spyAuthenticParagraph = 4
- spyAuthenticTag = 6
- spyAuthenticDocument = 8
- spyAuthenticTable = 9
- spyAuthenticTableRow = 10
- spyAuthenticTableColumn = 11
3.7 SPYAuthenticEntryHelperWindows

**Description**
Identification of the available entry helper windows.

**Possible values:**
- k_Elements = 1
- k_Attributes = 2
- k_Entities = 4
3.8 **SPYAuthenticMarkupVisibility**

**Description**
Enumeration values to customize the visibility of markup.

**Possible values:**
- `spyAuthenticMarkupHidden` = 0
- `spyAuthenticMarkupSmall` = 1
- `spyAuthenticMarkupLarge` = 2
- `spyAuthenticMarkupMixed` = 3
3.9 **SPYAuthenticToolbarAlignment**

**Description**
Values to specify toolbar alignment.

**Possible values:**

- `k_ToolbarAlignTop` = 0
- `k_ToolbarAlignLeft` = 1
- `k_ToolbarAlignBottom` = 2
- `k_ToolbarAlignRight` = 3
### 3.10 SPYAuthenticToolbarButtonState

**Description**  
Authentic toolbar button states are given by the following enumeration:

**Possible values:**

<table>
<thead>
<tr>
<th>Enumerations</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>authenticToolbarButtonDefault</td>
<td>0</td>
</tr>
<tr>
<td>authenticToolbarButtonEnabled</td>
<td>1</td>
</tr>
<tr>
<td>authenticToolbarButtonDisabled</td>
<td>2</td>
</tr>
</tbody>
</table>
3.11 SPYXMLDataKind

Description
The different types of XMLData elements available for XML documents.

Possible values:

spyXMLDataXMLDocStruct = 0
spyXMLDataXMLEntityDocStruct = 1
spyXMLDataDTDDocStruct = 2
spyXMLDataXML = 3
spyXMLDataElement = 4
spyXMLDataAttr = 5
spyXMLDataText = 6
spyXMLDataCDATA = 7
spyXMLDataComment = 8
spyXMLDataP = 9
spyXMLDataDefDoctype = 10
spyXMLDataDefExternalID = 11
spyXMLDataDefElement = 12
spyXMLDataDefAttlist = 13
spyXMLDataDefEntity = 14
spyXMLDataDefNotation = 15
spyXMLDataKindsCount = 16
Chapter 7

ASP.NET Web Applications
ASP.NET Web Applications

To ease deployment of Altova® Authentic® Browser Edition we provide an ASP.NET Server Control that completely integrates with Visual Studio .NET and allows ASP.NET developers to drag-and-drop Authentic Browser onto their web forms.

To use the ASP.NET Server Control

1. Download the ASP.NET Server Control for Authentic Browser Plug-in from the Altova website.
2. Start Visual Studio and register the assembly (the downloaded package) in Visual Studio .NET by adding it to the Toolbox. You could do this by selecting the Tools | Choose Toolbox Items command, and, in the Toolbox Items dialog, selecting the .NET Framework Components, and then browsing for the assembly (Altova:Authentic.WebControls.dll).
3. The AuthenticDocumentView control appears in the General pane of the Toolbox. Drag this control into the Design View and resize or modify as required. (The control will invoke Authentic Browser on the client-side web page.)
4. Add the plugin-related files (Schema, SPS, XML, image files, etc) to your project. One way to do this is to add a new folder to your Visual Studio project via Solution Explorer and add the plugin-related files to the new project folder. For each of these plugin-related files, set the following properties: Build Action = Content and Copy to Output Directory = Yes, when newer.
5. Set the following properties for the AuthenticDocumentView control: (i) Select the Trusted/Untrusted version; (ii) Add the SPS-related resources (SchemaDataURL, SPSDataURL, XMLDataURL); (iii) in the case of the Enterprise edition, add the license information.
6. For IIS version 7.0 or newer, add a static content handler for the SPS file. Do this by adding the following lines to your web.config file:

   <system.webServer>
   <staticContent>
   <mimeMap fileExtension=".sps" mimeType="text/xml" />
   </staticContent>
   </system.webServer>

Example ASP.NET project

An example ASP.NET web application project for Visual Studio 2008, called QuickStartAppl, has been included with the ASP.NET Server Control package. It is located in the Example folder of the unzipped package.
Chapter 8
License Information
License Information

This section contains:

- Information about the intellectual property rights related to this software product
- The End User License Agreement for Authentic governing the use of this software product

Please read this information carefully. It is binding upon you since you agreed to these terms when you installed this software product.

1 Intellectual Property Rights

The Altova Software and any copies that you are authorized by Altova to make are the intellectual property of and are owned by Altova and its suppliers. The structure, organization and code of the Software are the valuable trade secrets and confidential information of Altova and its suppliers. The Software is protected by copyright, including without limitation by United States Copyright Law, international treaty provisions and applicable laws in the country in which it is being used. Altova retains the ownership of all patents, copyrights, trade secrets, trademarks and other intellectual property rights pertaining to the Software, and that Altova’s ownership rights extend to any images, photographs, animations, videos, audio, music, text and “applets” incorporated into the Software and all accompanying printed materials. Notifications of claimed copyright infringement should be sent to Altova’s copyright agent as further provided on the Altova Web Site.

Altova software contains certain Third Party Software that is also protected by intellectual property laws, including without limitation applicable copyright laws as described in detail at http://www.altova.com/legal_3rdparty.html.

All other names or trademarks are the property of their respective owners.
2 Altova End User License Agreement for Authentic

The license agreement below applies to the following Altova products:

Authentic® Enterprise Edition

THIS IS A LEGAL DOCUMENT -- RETAIN FOR YOUR RECORDS

ALTOVA® END-USER LICENSE AGREEMENT

Licensor:
Altova GmbH
Rudolfsplatz 13a/9
A-1010 Wien
Austria

Important - Read Carefully. Notice to User:

This End User License Agreement (“Agreement”) is a legal document between you and Altova GmbH (“Altova”). It is important that you read this document before using the Altova-provided software (“Software”) and any accompanying documentation, including, without limitation, printed materials, ‘online’ files, or electronic documentation (“Documentation”). By clicking the “I accept” and “Next” buttons below, or by installing, or otherwise using the Software, you agree to be bound by the terms of this Agreement as well as the Altova Privacy Policy (“Privacy Policy”) including, without limitation, the warranty disclaimers, limitation of liability, data use and termination provisions below. You agree that this Agreement is enforceable like any written agreement negotiated and signed by you. If you do not agree, you are not licensed to use the Software, and you must destroy any downloaded copies of the Software in your possession or control. You may print a copy of this Agreement as part of the installation process at the time of acceptance. Alternatively, a copy of this Agreement may be found at http://www.altova.com/license_agreements.html and a copy of the Privacy Policy may be found at http://www.altova.com/privacy.

1. SOFTWARE LICENSE

(a) License Grant for Authentic Desktop Enterprise Edition (“ADEE”). Upon your acceptance of this Agreement, Altova grants you a non-exclusive, non-transferable (except as provided below), limited license, without the right to grant sublicenses, to install and use a copy of ADEE software on one compatible personal computer or workstation up to the Permitted Number of computers. You may not distribute or reproduce the ADEE software other than as expressly permitted. Subject to the limitations set forth in Section 1(a)(i) you may install and use a copy of this Software on more than one of your compatible personal computers or workstations if you have purchased a Named-User license. Subject to the limitations set forth in Sections 1(a)(ii) and (iii), users may use the Software concurrently on a network. The Permitted Number of computers and/or users and the type of license, e.g. Installed, Named-User, and Concurrent-User, shall be determined and specified at such time as you elect to purchase the Software. Installed user licenses are intended to be fixed and not concurrent. In other words, you cannot uninstall for one user in order to reinstall that license to a different user and then uninstall and reinstall back to the original user. Users should be static. Notwithstanding the foregoing, permanent switchovers are acceptable (i.e., an employee has left the company, machine is retired). During the evaluation
period, hereinafter defined, only a single user may install and use the ADEE software on one (1) personal computer or workstation. You may install one (1) copy of the ADEE software on a computer file server within your internal network solely for the purpose of downloading and installing this ADEE software onto other computers within your internal network up to the Permitted Number of computers in a commercial environment only. No other network use is permitted, including without limitation using the ADEE software either directly or through commands, data or instructions from or to a computer not part of your internal network, for Internet or Web-hosting services or by any user not licensed to use this copy of ADEE software through a valid license from Altova, except as set forth in Sections 1(a)(ii) and (iii) below Altova makes no warranties or representations about the performance of Software in a terminal server environment and the foregoing are expressly excluded from the limited warranty in Section 4 hereof and technical support is not available with respect to issues arising from use in such an environment.

(i) **Named-Use.** If you have licensed the “Named-User” version of the ADEE software, you may install the Software on up to five (5) compatible personal computers or workstations of which you are the primary user thereby allowing you to switch from one computer to the other as necessary provided that only one (1) instance of the ADEE software will be used by you as the Named-User at any given time. If you have purchased multiple Named-User licenses, each individual Named-User will receive a separate license key code.

(ii) **Concurrent Use in Same Local Area Network (LAN).** If you have licensed a “Concurrent-User” version of the ADEE software, you may install the ADEE software on any compatible computers in a commercial environment only, up to ten (10) times the Permitted Number of users, provided that only the Permitted Number of users actually use the Software at the same time and further provided that the computers on which the ADEE software is installed are on the same physical computer network. The Permitted Number of concurrent users shall be delineated at such time as you elect to purchase the ADEE licenses. Each separate physical network or office location requires its own set of separate Concurrent-User Licenses for those wishing to use the Concurrent-User versions of the Software in more than one location or on more than one network, all subject to the above Permitted Number limitations and based on the number of users using or needing access to the software. If a computer is not on the same physical network, then a locally installed user license or a license dedicated to concurrent use in a virtual environment is required.

(iii) **Concurrent Use in Virtual Environment.** If you have licensed a “Concurrent-User” versions of ADEE software, you may install a copy of the ADEE Software on a terminal server (Microsoft Terminal Server, Citrix Metaframe, etc.), application virtualization server (Microsoft App-V, Citrix XenApp, VMWare ThinApp, etc.) or virtual machine environment within your internal network for the sole and exclusive purpose of permitting individual users within your organization to access and use the Software through a terminal server, application virtualization session, or virtual machine environment from another computer provided that the total number of users that access or use the ADEE Software concurrently at any given point in time on such network, virtual machine or terminal server does not exceed the Permitted Number; and provided that the total number of users authorized to use the ADEE Software through the terminal server, application virtualization session, or virtual machine environment does not exceed ten (10) times the Permitted Number of users. Accordingly, the limitations set forth in Section 1(a)(ii) regarding the number of installations and the requirement that the usage be on the same physical network shall not apply to terminal server, application virtualization session, or virtual machine environments. In a virtual environment, you must deploy a means of preventing users from exceeding the Permitted Number of concurrent users. Altova makes no warranties or representations about the performance of Software in a terminal server, application virtualization
session, or virtual machine environment and the foregoing are expressly excluded from the limited warranty in Section 5 hereof and technical support is not available with respect to issues arising from use in such environments.

(iv) Key Codes for ADEE. Prior to your purchase and as part of the registration for the thirty (30) -day evaluation period, as applicable, you will receive an evaluation key code. You will receive a purchase key code when you elect to purchase the ADEE software licenses from either Altova GmbH or an authorized reseller. The purchase key code will enable you to activate the Software beyond the initial evaluation period. You may not re-license, reproduce or distribute any key code except with the express written permission of Altova.

(b) License Grant for Authentic Browser-Plugin Enterprise Edition (“ABEE”). Upon your acceptance of this Agreement, Altova grants you a non-exclusive, non-transferable limited license, without the right to grant sublicenses, to install and use ABEE software on a per server basis for a twelve (12) month term, commencing on the date of your license purchase and expiring on the date that is twelve (12) months thereafter (the “ABEE License Term”). Altova also grants you a non-exclusive, non-transferable, limited worldwide license, without the right to grant sublicenses, to use software to develop web pages, web applications, or applications that include ABEE software, to reproduce the ABEE software on your website or server and to distribute the ABEE software from your website or server over a computer network, but only in its executable object code form, and only to end users for the limited purpose of enabling them to view, share, and/or edit XML files during the ABEE License Term. If you wish to continue to use, and/or reproduce and/or distribute the ABEE software after the expiration of its license term, you must purchase a new ABEE software license. If you have purchased an ABEE software license then under the terms of the Agreement, support and maintenance (or SMP as further detailed below) for the software is included as part of the license purchase and you will be entitled to receive the benefits set forth below during the ABEE License Term which is coterminous with the Support Period. Unlike other Altova software products, you cannot renew SMP for the ABEE software and at the expiration of the ABEE License Term and Support Period, you must purchase a new ABEE software license if you wish to continue to use, reproduce or distribute the ABEE software.

(i) Key Codes for ABEE. Prior to your purchase you may request a thirty (30) day evaluation key code, which will be sent to you. You will receive a purchase key code when you elect to purchase the ABEE software licenses from either Altova GmbH or an authorized reseller. The purchase key code will enable you to use the ABEE software during the ABEE License Term. You may not re-license, reproduce or distribute any key code except with the express written permission of Altova.

(ii) ABEE Software Specific Restrictions. In addition to the restrictions and obligations provided in other sections of this Agreement that are applicable to the ABEE software, your limited license to distribute the ABEE software set forth above, is further subject to all of the following restrictions; (i) ABEE software may only be licensed but may not be sold, and (ii) you must use, reproduce or distribute the ABEE software provided by Altova AS IS and may not impair, alter or remove the Altova End User License Agreement, (which will appear in the installation process and which an end user must accept in order to be able to install or operate the Software or any other files).

(c) Backup and Archival Copies. You may make one (1) backup and one (1) archival copy of the Software, provided your backup and archival copies are not installed or used on any computer and further provided that all such copies shall bear the original and unmodified copyright, patent and other intellectual property markings that appear on or in the Software. You may not transfer the rights to a backup or archival copy unless you transfer all rights in the Software as provided in this Agreement.
(d) **Upgrades and Updates.** If the Software that you have licensed is an upgrade or an update, then the latest update or upgrade that you download and install replaces all or part of the Software previously licensed. The update or upgrade and the associated license keys, as applicable, does not constitute the granting of a second license to the software in that you may not use the upgrade or updated copy in addition to the copy of the software that it is replacing and whose license has terminated.

(e) **Title.** Title to the Software is not transferred to you. Ownership of all copies of the Software and of copies made by you is vested in Altova, subject to the rights of use or distribution, as applicable, granted to you in this Agreement. All rights not specifically granted in this Agreement are reserved by Altova.

(f) **Reverse Engineering.** Except and to the limited extent as may be otherwise specifically provided by applicable law in the European Union, you may not reverse engineer, decompile, disassemble or otherwise attempt to discover the source code, underlying ideas, underlying user interface techniques or algorithms of the Software by any means whatsoever, directly or indirectly, or disclose any of the foregoing, except to the extent you may be expressly permitted to decompile under applicable law in the European Union, if it is essential to do so in order to achieve operability of the Software with another software program, and you have first requested Altova to provide the information necessary to achieve such operability and Altova has not made such information available. Altova has the right to impose reasonable conditions and to request a reasonable fee before providing such information.

(g) **Other Restrictions.** You may not loan, rent, lease, sublicense, distribute or otherwise transfer all or any portion of the Software to third parties except to the limited extent set forth in Section 3 or as otherwise expressly provided. You may not copy the Software except as expressly set forth above, and any copies that you are permitted to make pursuant to this Agreement must contain the same copyright, patent and other intellectual property markings that appear on or in the Software. You may not modify, adapt or translate the Software. You may not, directly or indirectly, encumber or suffer to exist any lien or security interest on the Software; knowingly take any action that would cause the Software to be placed in the public domain; or use the Software in any computer environment not specified in this Agreement. You may not permit any use of or access to the Software by any third party in connection with a commercial service offering, such as for a cloud-based or web-based SaaS offering.

You will comply with applicable law and Altova’s instructions regarding the use of the Software. You agree to notify your employees and agents who may have access to the Software of the restrictions contained in this Agreement and to ensure their compliance with these restrictions.

(h) **NO GUARANTEE.** THE SOFTWARE IS NEITHER GUARANTEED NOR WARRANTED TO BE ERROR-FREE NOR SHALL ANY LIABILITY BE ASSUMED BY ALTOVA IN THIS RESPECT. NOTWITHSTANDING ANY SUPPORT FOR ANY TECHNICAL STANDARD, THE SOFTWARE IS NOT INTENDED FOR USE IN OR IN CONNECTION WITH, WITHOUT LIMITATION, THE OPERATION OF NUCLEAR FACILITIES, AIRCRAFT NAVIGATION, COMMUNICATION SYSTEMS, AIR TRAFFIC CONTROL EQUIPMENT, MEDICAL DEVICES OR LIFE SUPPORT SYSTEMS, MEDICAL OR HEALTH CARE APPLICATIONS, OR OTHER APPLICATIONS WHERE THE FAILURE OF THE SOFTWARE OR ERRORS IN DATA PROCESSING COULD LEAD TO DEATH, PERSONAL INJURY OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE. YOU AGREE THAT YOU ARE SOLELY RESPONSIBLE FOR THE ACCURACY AND ADEQUACY OF THE SOFTWARE AND ANY DATA GENERATED OR PROCESSED BY THE SOFTWARE FOR YOUR INTENDED USE AND YOU WILL DEFEND, INDEMNIFY AND HOLD ALTOVA, ITS OFFICERS AND EMPLOYEES HARMLESS FROM ANY
THIRD PARTY CLAIMS, DEMANDS, OR SUITS THAT ARE BASED UPON THE ACCURACY AND ADEQUACY OF THE SOFTWARE IN YOUR USE OR ANY DATA GENERATED BY THE SOFTWARE IN YOUR USE.

2. INTELLECTUAL PROPERTY RIGHTS

You acknowledge that the Software and any copies that you are authorized by Altova to make are the intellectual property of and are owned by Altova and its suppliers. The structure, organization and code of the Software are the valuable trade secrets and confidential information of Altova and its suppliers. The Software is protected by copyright, including without limitation by United States Copyright Law, international treaty provisions and applicable laws in the country in which it is being used. You acknowledge that Altova retains the ownership of all patents, copyrights, trade secrets, trademarks and other intellectual property rights pertaining to the Software, and that Altova’s ownership rights extend to any images, photographs, animations, videos, audio, music, text and “applets” incorporated into the Software and all accompanying printed materials. You will take no actions which adversely affect Altova’s intellectual property rights in the Software. Trademarks shall be used in accordance with accepted trademark practice, including identification of trademark owners’ names. Trademarks may only be used to identify printed output produced by the Software, and such use of any trademark does not give you any right of ownership in that trademark. Altova®, XMLSpy®, Authentic®, StyleVision®, MapForce®, UModel®, DatabaseSpy®, DiffDog®, SchemaAgent®, SemanticWorks®, MissionKit®, Markup Your Mind®, NaNonnulITM, RaptorXML™, RaptorXML Server™, RaptorXML +XBRL Server™, Powered By RaptorXML™, FlowForce Server™, StyleVision Server™, and MapForce Server™ are trademarks of Altova GmbH. (pending or registered in numerous countries). Unicode and the Unicode Logo are trademarks of Unicode, Inc. Windows, Windows XP, Windows Vista, Windows 7, and Windows 8 are trademarks of Microsoft. W3C, CSS, DOM, MathML, RDF, XHTML, XML and XSL are trademarks (registered in numerous countries) of the World Wide Web Consortium (W3C); marks of the W3C are registered and held by its host institutions, MIT, INRIA and Keio. Except as expressly stated above, this Agreement does not grant you any intellectual property rights in the Software. Notifications of claimed copyright infringement should be sent to Altova’s copyright agent as further provided on the Altova Web Site.

3. LIMITED TRANSFER RIGHTS

Notwithstanding the foregoing, you may transfer all your rights to use the Software to another person or legal entity provided that: (a) you also transfer this Agreement, the Software and all other software or hardware bundled or pre-installed with the Software, including all copies, updates and prior versions, and all copies of font software converted into other formats, to such person or entity; (b) you retain no copies, including backups and copies stored on a computer; (c) the receiving party secures a personalized key code from Altova; and (d) the receiving party accepts the terms and conditions of this Agreement and any other terms and conditions upon which you legally purchased a license to the Software. Notwithstanding the foregoing, you may not transfer education, pre-release, or not-for-resale copies of the Software.

4. PRE-RELEASE AND EVALUATION PRODUCT ADDITIONAL TERMS

If the product you have received with this license is pre-commercial release or beta Software (“Pre-release Software”), then this Section 4 applies. In addition, this section applies to all evaluation and/or demonstration copies of Altova software (“Evaluation Software”) and continues in effect until you purchase a license. To the extent that any provision in this section is in conflict with any other term or condition in this Agreement, this section shall supersede such other term(s) and condition(s) with respect to the Pre-release and/or Evaluation Software, but only to the extent necessary to resolve the conflict. You acknowledge that the Pre-release Software is a pre-release.
version, does not represent final product from Altova, and may contain bugs, errors and other problems that could cause system or other failures and data loss. CONSEQUENTLY, THE PRE-RELEASE AND/OR EVALUATION SOFTWARE IS PROVIDED TO YOU “AS-IS” WITH NO WARRANTIES FOR USE OR PERFORMANCE, AND ALTova DISCLAIMS ANY WARRANTY OR LIABILITY OBLIGATIONS TO YOU OF ANY KIND, WHETHER EXPRESS OR IMPLIED. WHERE LEGALLY LIABILITY CANNOT BE EXCLUDED FOR PRE-RELEASE AND/OR EVALUATION SOFTWARE, BUT IT MAY BE LIMITED, ALTova’S LIABILITY AND THAT OF ITS SUPPLIERS SHALL BE LIMITED TO THE SUM OF FIFTY DOLLARS (USD $50) IN TOTAL. If the Evaluation Software has a time-out feature, then the software will cease operation after the conclusion of the designated evaluation period. Upon such expiration date, your license will expire unless otherwise extended. Your license to use any output created with the Evaluation Software that contains generated program code (including Unrestricted Source Code) such as Java, C++, C, VB.NET or XSLT and associated project files and build scripts as well as generated XML, XML Schemas, documentation, UML diagrams, and database structures terminates automatically upon the expiration of the designated evaluation period but the license to use such output is revived upon your purchase of a license for the Software that you evaluated and used to create such output. Access to any files created with the Evaluation Software is entirely at your risk. You acknowledge that Altova has not promised or guaranteed to you that Pre-release Software will be announced or made available to anyone in the future, that Altova has no express or implied obligation to you to announce or introduce the Pre-release Software, and that Altova may not introduce a product similar to or compatible with the Pre-release Software. Accordingly, you acknowledge that any research or development that you perform regarding the Pre-release Software or any product associated with the Pre-release Software is done entirely at your own risk. During the term of this Agreement, if requested by Altova, you will provide feedback to Altova regarding testing and use of the Pre-release Software, including error or bug reports. If you have been provided the Pre-release Software pursuant to a separate written agreement, your use of the Software is governed by such agreement. You may not sublicense, lease, loan, rent, distribute or otherwise transfer the Pre-release Software. Upon receipt of a later unreleased version of the Pre-release Software or release by Altova of a publicly released commercial version of the Software, whether as a stand-alone product or as part of a larger product, you agree to return or destroy all earlier Pre-release Software received from Altova and to abide by the terms of the license agreement for any such later versions of the Pre-release Software.

5. LIMITED WARRANTY AND LIMITATION OF LIABILITY

(a) Limited Warranty and Customer Remedies. Altova warrants to the person or entity that first purchases a license for use of the Software pursuant to the terms of this Agreement that (i) the Software will perform substantially in accordance with any accompanying Documentation for a period of ninety (90) days from the date of receipt, and (ii) any support services provided by Altova shall be substantially as described in Section 6 of this Agreement. Some states and jurisdictions do not allow limitations on duration of an implied warranty, so the above limitation may not apply to you. To the extent allowed by applicable law, implied warranties on the Software, if any, are limited to ninety (90) days. Altova’s and its suppliers’ entire liability and your exclusive remedy shall be, at Altova’s option, either (i) return of the price paid, if any, or (ii) repair or replacement of the Software that does not meet Altova’s Limited Warranty and which is returned to Altova with a copy of your receipt. This Limited Warranty is void if failure of the Software has resulted from accident, abuse, misapplication, abnormal use, Trojan horse, virus, or any other malicious external code. Any replacement Software will be warranted for the remainder of the original warranty period or thirty (30) days, whichever is longer. This limited warranty does not apply to Evaluation and/or Pre-release Software.

(b) No Other Warranties and Disclaimer. THE FOREGOING LIMITED WARRANTY AND REMEDIES STATE THE SOLE AND EXCLUSIVE REMEDIES FOR ALTova OR ITS
SUPPLIER’S BREACH OF WARRANTY. ALTOVA AND ITS SUPPLIERS DO NOT AND CANNOT WARRANT THE PERFORMANCE OR RESULTS YOU MAY OBTAIN BY USING THE SOFTWARE. EXCEPT FOR THE FOREGOING LIMITED WARRANTY, AND FOR ANY WARRANTY, CONDITION, REPRESENTATION OR TERM TO THE EXTENT WHICH THE SAME CANNOT OR MAY NOT BE EXCLUDED OR LIMITED BY LAW APPLICABLE TO YOU IN YOUR JURISDICTION, ALTOVA AND ITS SUPPLIERS MAKE NO WARRANTIES, CONDITIONS, REPRESENTATIONS OR TERMS, EXPRESS OR IMPLIED, WHETHER BY STATUTE, COMMON LAW, CUSTOM, USAGE OR OTHERWISE AS TO ANY OTHER MATTERS. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, ALTOVA AND ITS SUPPLIERS DISCLAIM ALL OTHER WARRANTIES AND CONDITIONS, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, SATISFACTORY QUALITY, INFORMATIONAL CONTENT OR ACCURACY, QUIET ENJOYMENT, TITLE AND NON-INFRINGEMENT, WITH REGARD TO THE SOFTWARE, AND THE PROVISION OF OR FAILURE TO PROVIDE SUPPORT SERVICES. THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY HAVE OTHERS, WHICH VARY FROM STATE/JURISDICTION TO STATE/JURISDICTION.

(c) **Limitation of Liability.** TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW EVEN IF A REMEDY FAILS ITS ESSENTIAL PURPOSE, IN NO EVENT SHALL ALTOVA OR ITS SUPPLIERS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, DIRECT, INDIRECT OR CONSEQUENTIAL DAMAGES WHATSOEVER (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, OR ANY OTHER PECUNIARY LOSS) ARISING OUT OF THE USE OF OR INABILITY TO USE THE SOFTWARE OR THE PROVISION OF OR FAILURE TO PROVIDE SUPPORT SERVICES, EVEN IF ALTOVA HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN ANY CASE, ALTOVA’S ENTIRE LIABILITY UNDER ANY PROVISION OF THIS AGREEMENT SHALL BE LIMITED TO THE AMOUNT ACTUALLY PAID BY YOU FOR THE SOFTWARE PRODUCT. Because some states and jurisdictions do not allow the exclusion or limitation of liability, the above limitation may not apply to you. In such states and jurisdictions, Altova’s liability shall be limited to the greatest extent permitted by law and the limitations or exclusions of warranties and liability contained herein do not prejudice applicable statutory consumer rights of person acquiring goods otherwise than in the course of business. The disclaimer and limited liability above are fundamental to this Agreement between Altova and you.

(d) **Infringement Claims.** Altova will indemnify and hold you harmless and will defend or settle any claim, suit or proceeding brought against you by a third party that is based upon a claim that the content contained in the Software infringes a copyright or violates an intellectual or proprietary right protected by United States or European Union law (“Claim”), but only to the extent the Claim arises directly out of the use of the Software and subject to the limitations set forth in Section 5 of this Agreement except as otherwise expressly provided. You must notify Altova in writing of any Claim within ten (10) business days after you first receive notice of the Claim, and you shall provide to Altova at no cost such assistance and cooperation as Altova may reasonably request from time to time in connection with the defense of the Claim. Altova shall have sole control over any Claim (including, without limitation, the selection of counsel and the right to settle on your behalf or on any terms Altova deems desirable in the sole exercise of its discretion). You may, at your sole cost, retain separate counsel and participate in the defense or settlement negotiations. Altova shall pay actual damages, costs, and attorney fees awarded against you (or payable by you pursuant to a settlement agreement) in connection with a Claim to the extent such direct damages and costs are not reimbursed to you by insurance or a third party, to an aggregate maximum equal to the purchase price of the Software. If the Software or its use becomes the subject of a Claim or its use is enjoined, or if in the opinion of Altova’s legal counsel the Software is likely to become the subject of a Claim, Altova shall attempt to resolve the Claim by using commercially reasonable efforts to modify the Software or obtain a license to
continue using the Software. If in the opinion of Altova’s legal counsel the Claim, the injunction or potential Claim cannot be resolved through reasonable modification or licensing, Altova, at its own election, may terminate this Agreement without penalty, and will refund to you on a pro rata basis any fees paid in advance by you to Altova. THE FOREGOING CONSTITUTES ALTOVA’S SOLE AND EXCLUSIVE LIABILITY FOR INTELLECTUAL PROPERTY INFRINGEMENT. This indemnity does not apply to situations where the alleged infringement, whether patent or otherwise, is the result of a combination of the Altova software and additional elements supplied by you.

6. SUPPORT AND MAINTENANCE

Altova offers multiple optional “Support & Maintenance Package(s)” (“SMP”) for the version of Software product edition that you have licensed, which you may elect to purchase in addition to your Software license. The Support Period, hereinafter defined, covered by such SMP shall be delineated at such time as you elect to purchase a SMP. Your rights with respect to support and maintenance as well as your upgrade eligibility depend on your decision to purchase SMP and the level of SMP that you have purchased:

(a) If you have not purchased SMP, you will receive the Software “AS IS” and will not receive any maintenance releases or updates. However, Altova, at its option and in its sole discretion on a case by case basis, may decide to offer maintenance releases to you as a courtesy, but these maintenance releases will not include any new features in excess of the feature set at the time of your purchase of the Software. In addition, Altova will provide free technical support to you for thirty (30) days after the date of your purchase (the “Support Period” for the purposes of this paragraph 6(a), and Altova, in its sole discretion on a case by case basis, may also provide free courtesy technical support during your thirty (30) day evaluation period. Technical support is provided via a Web-based support form only, and there is no guaranteed response time.

(b) If you have purchased SMP, then solely for the duration of its delineated Support Period, you are eligible to receive the version of the Software edition that you have licensed and all maintenance releases and updates for that edition that are released during your Support Period. For the duration of your SMP’s Support Period, you will also be eligible to receive upgrades to the comparable edition of the next version of the Software that succeeds the Software edition that you have licensed for applicable upgrades released during your Support Period. The specific upgrade edition that you are eligible to receive based on your Support Period is further detailed in the SMP that you have purchased. Software that is introduced as separate product is not included in SMP. Maintenance releases, updates and upgrades may or may not include additional features. In addition, Altova will provide Priority Technical Support to you for the duration of the Support Period. Priority Technical Support is provided via a Web-based support form only and Altova will make commercially reasonable efforts to respond via e-mail to all requests within forty-eight (48) hours during Altova’s business hours (MO-FR, 8am UTC – 10pm UTC, Austrian and US holidays excluded) and to make reasonable efforts to provide work-arounds to errors reported in the Software.

During the Support Period you may also report any Software problem or error to Altova. If Altova determines that a reported reproducible material error in the Software exists and significantly impairs the usability and utility of the Software, Altova agrees to use reasonable commercial efforts to correct or provide a usable work-around solution in an upcoming maintenance release or update, which is made available at certain times at Altova’s sole discretion.

If Altova, in its discretion, requests written verification of an error or malfunction discovered by you or requests supporting example files that exhibit the Software problem, you shall promptly provide such verification or files, by email, telexcopy, or overnight mail, setting forth in reasonable detail the respects in which the Software fails to perform. You shall use reasonable efforts to cooperate in
diagnosis or study of errors. Altova may include error corrections in maintenance releases, updates, or new major releases of the Software. Altova is not obligated to fix errors that are immaterial. Immaterial errors are those that do not significantly impact use of the Software as determined by Altova in its sole discretion. Whether or not you have purchased the Support & Maintenance Package, technical support only covers issues or questions resulting directly out of the operation of the Software and Altova will not provide you with generic consultation, assistance, or advice under any circumstances.

Updating Software may require the updating of software not covered by this Agreement before installation. Updates of the operating system and application software not specifically covered by this Agreement are your responsibility and will not be provided by Altova under this Agreement. Altova’s obligations under this Section 6 are contingent upon your proper use of the Software and your compliance with the terms and conditions of this Agreement at all times. Altova shall be under no obligation to provide the above technical support if, in Altova’s opinion, the Software has failed due to the following conditions: (i) damage caused by the relocation of the Software to another location or CPU; (ii) alterations, modifications or attempts to change the Software without Altova’s written approval; (iii) causes external to the Software, such as natural disasters, the failure or fluctuation of electrical power, or computer equipment failure; (iv) your failure to maintain the Software at Altova’s specified release level; or (v) use of the Software with other software without Altova’s prior written approval. It will be your sole responsibility to: (i) comply with all Altova-specified operating and troubleshooting procedures and then notify Altova immediately of Software malfunction and provide Altova with complete information thereof; (ii) provide for the security of your confidential information; (iii) establish and maintain backup systems and procedures necessary to reconstruct lost or altered files, data or programs.

7. SOFTWARE ACTIVATION, UPDATES AND LICENSE METERING

(a) License Metering. The Software includes a built-in license metering module that is designed to assist you with monitoring license compliance in small local area networks (LAN). The metering module attempts to communicate with other machines on your local area network (LAN). You permit Altova to use your internal network for license monitoring for this purpose. This license metering module may be used to assist with your license compliance but should not be the sole method. Should your firewall settings block said communications, you must deploy an accurate means of monitoring usage by the end user and preventing users from using the Software more than the Permitted Number.

(b) License Compliance Monitoring. You are required to utilize a process or tool to ensure that the Permitted Number is not exceeded. Without prejudice or waiver of any potential violations of the Agreement, Altova may provide you with additional compliance tools should you be unable to accurately account for license usage within your organization. If provided with such a tool by Altova, you (a) are required to use it in order to comply with the terms of this Agreement and (b) permit Altova to use your internal network for license monitoring and metering and to generate compliance reports that are communicated to Altova from time to time.

(c) Software Activation. The Software may use your internal network and Internet connection for the purpose of transmitting license-related data at the time of installation, registration, use, or update to an Altova Master License Server and validating the authenticity of the license-related data in order to protect Altova against unlicensed or illegal use of the Software and to improve customer service. Activation is based on the exchange of license related data between your computer and the Altova Master License Server. You agree that Altova may use these measures and you agree to follow any applicable requirements. You further agree that use of license key codes that are not or were not generated by Altova and lawfully obtained from Altova, or an authorized
reseller as part of an effort to activate or use the Software violates Altova’s intellectual property rights as well as the terms of this Agreement. You agree that efforts to circumvent or disable Altova’s copyright protection mechanisms, the license management mechanism, or the Altova Master License Server violate Altova’s intellectual property rights as well as the terms of this Agreement. Altova expressly reserves the rights to seek all available legal and equitable remedies to prevent such actions and to recover lost profits, damages and costs.

(d) **LiveUpdate.** Altova provides a new LiveUpdate notification service to you, which is free of charge. Altova may use your internal network and Internet connection for the purpose of transmitting license-related data to an Altova-operated LiveUpdate server to validate your license at appropriate intervals and determine if there is any update available for you.

(e) **Use of Data.** The terms and conditions of the Privacy Policy are set out in full at http://www.altova.com/privacy and are incorporated by reference into this Agreement. By your acceptance of the terms of this Agreement and/or use of the Software, you authorize the collection, use and disclosure of information collected by Altova for the purposes provided for in this Agreement and/or the Privacy Policy. Altova has the right in its sole discretion to amend this provision of the Agreement and/or Privacy Policy at any time. You are encouraged to review the terms of the Privacy Policy as posted on the Altova Web site from time to time.

(f) **Audit Rights.** You agree that Altova may audit your use of the Software for compliance with the terms of this Agreement at any time, upon reasonable notice. In the event that such audit reveals any use of the Software by you other than in full compliance with the terms of this Agreement, you shall reimburse Altova for all reasonable expenses related to such audit in addition to any other liabilities you may incur as a result of such non-compliance.

(g) **Notice to European Users.** Please note that the information as described in paragraph 7(d) above may be transferred outside of the European Economic Area, for purposes of processing, analysis, and review, by Altova, Inc., a company located in Beverly, Massachusetts, U.S.A., or its subsidiaries or Altova’s subsidiaries or divisions, or authorized partners, located worldwide. You are advised that the United States uses a sectoral model of privacy protection that relies on a mix of legislation, governmental regulation, and self-regulation. You are further advised that the Council of the European Union has found that this model does not provide “adequate” privacy protections as contemplated by Article 25 of the European Union’s Data Directive. (Directive 95/46/EC, 1995 O.J. (L 281) 31). Article 26 of the European Union's Data Directive allows for transfer of personal data from the European Union to a third country if the individual has unambiguously given his consent to the transfer of personal information, regardless of the third country's level of protection. By agreeing to this Agreement, you consent to the transfer of all such information to the United States and the processing of that information as described in this Agreement and the Privacy Policy.

8. TERM AND TERMINATION

This Agreement may be terminated (a) by your giving Altova written notice of termination; (b) by Altova, at its option, giving you written notice of termination if you commit a breach of this Agreement and fail to cure such breach within ten (10) days after notice from Altova; or (c) at the request of an authorized Altova reseller in the event that you fail to make your license payment or other monies due and payable. This Agreement automatically terminates upon the expiration of the ABEE License Term. In addition the Agreement governing your use of a previous version of the Software that you have upgraded or updated is terminated upon your acceptance of the terms and conditions of the Agreement accompanying such upgrade or update. Upon any termination of the Agreement, you must cease all use of the Software that this Agreement governs, destroy all
copies then in your possession or control and take such other actions as Altova may reasonably request to ensure that no copies of the Software remain in your possession or control. The terms and conditions set forth in Sections 1(c)-(h), 2, 5, 7, 9, 11-14 survive termination as applicable.

9. RESTRICTED RIGHTS NOTICE AND EXPORT RESTRICTIONS

The Software was developed entirely at private expense and is commercial computer software provided with RESTRICTED RIGHTS. Use, duplication or disclosure by the U.S. Government or a U.S. Government contractor or subcontractor is subject to the restrictions set forth in this Agreement and as provided in FAR 12.211 and 12.212 (48 C.F.R. §12.211 and 12.212) or DFARS 227. 7202 (48 C.F.R. §227-7202) as applicable. Consistent with the above as applicable, Commercial Computer Software and Commercial Computer Documentation licensed to U.S. government end users only as commercial items and only with those rights as are granted to all other end users under the terms and conditions set forth in this Agreement. Manufacturer is Altova GmbH, Rudolfsplatz 13a/9, A-1010 Vienna, Austria/EU. You may not use or otherwise export or re-export the Software or Documentation except as authorized by United States law and the laws of the jurisdiction in which the Software was obtained. In particular, but without limitation, the Software or Documentation may not be exported or re-exported (i) into (or to a national or resident of) any U.S. embargoed country or (ii) to anyone on the U.S. Treasury Department's list of Specially Designated Nationals or the U.S. Department of Commerce's Table of Denial Orders. By using the Software, you represent and warrant that you are not located in, under control of, or a national or resident of any such country or on any such list.

10. U.S. GOVERNMENT ENTITIES

Notwithstanding the foregoing, if you are an agency, instrumentality or department of the federal government of the United States, then this Agreement shall be governed in accordance with the laws of the United States of America, and in the absence of applicable federal law, the laws of the Commonwealth of Massachusetts will apply. Further, and notwithstanding anything to the contrary in this Agreement (including but not limited to Section 5 (Indemnification)), all claims, demands, complaints and disputes will be subject to the Contract Disputes Act (41 U.S.C. §§7101 et seq.), the Tucker Act (28 U.S.C. §1346(a) and §1491), or the Federal Tort Claims Act (28 U.S.C. §§1346(b), 2401-2402, 2671-2672, 2674-2680), FAR 1.601(a) and 43.102 (Contract Modifications); FAR 12.302(b), as applicable, or other applicable governing authority. For the avoidance of doubt, if you are an agency, instrumentality, or department of the federal, state or local government of the U.S. or a U.S. public and accredited educational institution, then your indemnification obligations are only applicable to the extent they would not cause you to violate any applicable law (e.g., the Anti-Deficiency Act), and you have any legally required authorization or authorizing statute.

11. THIRD PARTY SOFTWARE

The Software may contain third party software which requires notices and/or additional terms and conditions. Such required third party software notices and/or additional terms and conditions are located at our Website at http://www.altova.com/legal_3rdparty.html and are made a part of and incorporated by reference into this Agreement. By accepting this Agreement, you are also accepting the additional terms and conditions, if any, set forth therein.

12. JURISDICTION, CHOICE OF LAW, AND VENUE

If you are located in the European Union and are using the Software in the European Union and not in the United States, then this Agreement will be governed by and construed in accordance with the laws of the Republic of Austria (excluding its conflict of laws principles and the U.N.
Convention on Contracts for the International Sale of Goods) and you expressly agree that exclusive jurisdiction for any claim or dispute with Altova or relating in any way to your use of the Software resides in the Handelsgericht, Wien (Commercial Court, Vienna) and you further agree and expressly consent to the exercise of personal jurisdiction in the Handelsgericht, Wien (Commercial Court, Vienna) in connection with any such dispute or claim.

If you are located in the United States or are using the Software in the United States then this Agreement will be governed by and construed in accordance with the laws of the Commonwealth of Massachusetts, USA (excluding its conflict of laws principles and the U.N. Convention on Contracts for the International Sale of Goods) and you expressly agree that exclusive jurisdiction for any claim or dispute with Altova or relating in any way to your use of the Software resides in the federal or state courts of the Commonwealth of Massachusetts and you further agree and expressly consent to the exercise of personal jurisdiction in the federal or state courts of the Commonwealth of Massachusetts in connection with any such dispute or claim.

If you are located outside of the European Union or the United States and are not using the Software in the United States, then this Agreement will be governed by and construed in accordance with the laws of the Republic of Austria (excluding its conflict of laws principles and the U.N. Convention on Contracts for the International Sale of Goods) and you expressly agree that exclusive jurisdiction for any claim or dispute with Altova or relating in any way to your use of the Software resides in the Handelsgericht, Wien (Commercial Court, Vienna) and you further agree and expressly consent to the exercise of personal jurisdiction in the Handelsgericht Wien (Commercial Court, Vienna) in connection with any such dispute or claim. This Agreement will not be governed by the conflict of law rules of any jurisdiction or the United Nations Convention on Contracts for the International Sale of Goods, the application of which is expressly excluded.

13. TRANSLATIONS

Where Altova has provided you with a foreign translation of the English language version, you agree that the translation is provided for your convenience only and that the English language version will control. If there is any contradiction between the English language version and a translation, then the English language version shall take precedence.

14. GENERAL PROVISIONS

This Agreement contains the entire agreement and understanding of the parties with respect to the subject matter hereof, and supersedes all prior written and oral understandings of the parties with respect to the subject matter hereof. Any notice or other communication given under this Agreement shall be in writing and shall have been properly given by either of us to the other if sent by certified or registered mail, return receipt requested, or by overnight courier to the address shown on Altova’s Web site for Altova and the address shown in Altova’s records for you, or such other address as the parties may designate by notice given in the manner set forth above. This Agreement will bind and inure to the benefit of the parties and our respective heirs, personal and legal representatives, affiliates, successors and permitted assigns. The failure of either of us at any time to require performance of any provision hereof shall in no manner affect such party’s right at a later time to enforce the same or any other term of this Agreement. This Agreement may be amended only by a document in writing signed by both of us. In the event of a breach or threatened breach of this Agreement by either party, the other shall have all applicable equitable as well as legal remedies. Each party is duly authorized and empowered to enter into and perform this Agreement. If, for any reason, any provision of this Agreement is held invalid or otherwise unenforceable, such invalidity or unenforceability shall not affect the remainder of this Agreement, and this Agreement shall continue in full force and effect to the fullest extent allowed by law. The parties knowingly and expressly consent to the foregoing terms and conditions.
